In July, the USAPL decide it needed a deadlift only qualifier for the East Coast for the Arnold Pro Deadlift Competition sponsored by GNC. It made perfect sense that the biggest deadlift only meet in the nation should have deadlift only qualifiers in both the West (Denver) and the East. The USAPL took a gamble on the tiny town of Elizabethton, TN, but it worked out perfectly in the end. The Night of the Living Dead has built up a pretty good reputation in the past four years and when it was sanctioned to become the deadlift only qualifier for the east a few of the big name deadlift only guys showed up to earn their spot to the Arnold. Just because this meet had become USAPL sanctioned did not mean that the format would change. The music was still blaring, the fog machine was still rolling, the money was still being shelled out, the house lights were still off, the spot lights were still on, and of course the most insane crowd in all of powerlifting was still there. Even though it was more of an elite level meet, we decided to start the meet by showing off some of the high school lifters that the proceeds were going to in this meet. I am so glad we did. Paul Mount (86 lbs.), Sarah Kapoor (110 lbs.), and Holden Blevins (122 lbs.) put on a fantastic show for the crowd. All of them have only been lifting for nine months and were not really peaked up for the meet but lifted well. Mount pulled right at double bodyweight, Sarah went two times her bodyweight, and Blevins killed 305 for a PR and then jumped all the way to 366 for his first triple bodyweight pull. He had it way above his knees when he surprised himself with how fast he pulled it and lost his balance. He was very upset with himself and wanted to try again. I promised him he would get that and more at his next meet. Now, on to the big name lifters. Deron Rogers was a lifter that had already graced the Arnold stage. He wisely chose to come and defend his ranking at this meet. Unfortunately he was having an off day and looked pretty sick at weigh-ins. He told me he came all the way from Murfreesboro and wanted to try and lift, but would just have to see where he was after warm-ups. He opened with 705 and just missed it. Since he has pulled much more than that, it was obvious he was nowhere near his previous pulling condition. You have to admire his heart for

Paul Sutphin – W. Virginia Legend

USAPL Night of the Living Deadlift Glory

driving five hours and giving it his most valiant effort. Paul Sutphin has to be regarded as a legend in the sport. He has been competing at a high level for 30 years and has been a judge for 25. He filled both jobs at this meet. He came and just hit a 510 raw on his second and then took his judge's chair for the rest of the meet. He came to the meet on short notice and really used it more as a training day, but I still find it impressive that he can go over 500 raw any day at over 50 years old and just above 200 pounds of bodyweight. Charlie Conner is one strong teenage lifter. He finished third at 181 in a tight battle at the 2008 USAPL High School Nationals. He has since moved up to 198 and took this meet on four days notice. He started light and jumped big. He smoked 525 on a second. His PR is 545. He felt good and figured he had nothing to lose and jumped to 600. It was just a bit too much on this day, but he was looking for much more from this young man in the near future. Dean Nichols is a fine SHW lifter from South Carolina. He has been hitting mid 700's for a while and has been working hard to move up to 800. He drove up the seven hour trip the day of the meet and wasn't feeling very well either, but he lifted valiantly anyway. He pulled 705 super easy on an opener. He then went to 755 which was going well all the way to the very top, where just short of lockout it stalled and came out of his hand. He missed it again on his third, but inspired everyone with his lifting. We look forward to that 800 pull from him soon. Mike Stanley is a great full meet lifter at 165. He finished 4th at the 2008 USAPL Men's Nationals despite being in the master's class. He was kind of torn about coming to this meet, because it was really for deadlift specialists and the big goal was to qualify for the Arnold. With such a light bodyweight he felt pulling the 705 would be a big stretch even though he has pulled mid 600's in a full meet. He was just hoping to have fun and maybe put up a really good Wilks score of over 200. He killed a 560 on his second and just missed a 610 on his third. If he would have hit that 610, he would have been right at the 200 Wilks he wanted. Mike is one of the nicest guys in the sport and a great lifter, and we are so glad he came up and lifted with us all the way from South Carolina. Mike Nease is one of the greatest deadlifters in the world when he is in top shape. The first time I ever saw this guy lift he pulled 800 in gym shorts and did not even know he was going to be lifting that day. I saw him obliterate the American record for the Master's II deadlift by about 100 pounds at our state meet, although it did not count, because we did not have three national referees. Mike is also ranked in the top five master's lifters of all time in the entire world with 866. He just had shoulder surgery a few months ago, had a bad hamstring pull, and had dropped about 30 pounds in recent months. He informed me he would not be in top shape but if he says he is coming he would be there. He came there determined to get that Master's II record

even though he was not peaked. He took 735 on a second and just killed it and even held it there for a couple of extra seconds to make sure. He then jumped to 760 and had that thing about one inch from lockout before it slipped from his grip. He had plenty of strength to do that and more. When his hamstring and shoulder get healed up, he will be ready to get deep into the 800's again. We had several fine

Holding Court – Tee Meyers, otherwise known as THE SHOWMAN

female lifters entered in the meet, but the injury bug hit, so the only female looking to make her way to the Arnold stage was Rhonda "Big Kuntry" Sams from GA. Tee Meyers trains this young lady and she has plenty of attitude, lots of potential, perfect form, and is very strong. She had two very strong first attempts that ended with 425. She wanted 445, but when she realized that 455 would give her the 200 Wilks minimum to qualify for the Arnold, without hesitation she called for that number. She had that lift going well and it was above her knees and almost to lockout, but she just ran out of steam. She is a fine female lifter and we hope to see her get qualified for the Arnold next year. Josh Rohr is one of the finest young 181 lifters in the world. He is a former IPF world team member and medalist. He had a back injury last year and is coming back from that injury. He wanted to get into the Arnold badly even though the odds are

kind of stacked against the little guy. He trained his butt off to pull that 705. He took huge jumps between lifts just saving up that energy for his last pull. He did 585 and 645 easily and then the bar was loaded with the magical qualifier. It was going to give him one sick Wilks score of about 214 if he pulled it. He walked up to that bar amazing the crowd that a lifter so small and with such low muscle mass could hoist weights anywhere near this. He put everything he had into that lift, but on this day it was just not to be. I really look forward to him qualifying next year, because this young man's future is bright. This left a huge showdown between four of the best pullers in America.

Bob Eucker came in at the heaviest weight of the four at 236. He had pulled 800 in training a few years back, but after a brief layoff is working his way back into the high 700's again. He opened with 710 and really smoked it off the floor, but let his weight get forward at the top and missed it. He retook it on his second to insure he met the 705 minimum requirement for the Arnold and absolutely destroyed the weight. This meant he would have to jump big on his third to get a Wilks score high enough to try to get an invite. He went to 760. It was the perfect attempt as it was right on his limit but he still pulled it solidly. I expect this young man to be hitting 800 really soon, and if he gets that Arnold invite watch out for 800. Now, only three were left and this was a lineup of three of the great 181/198 lifters in the world. The lightest of the three was Tom

(continued on page 106)

Your building block for 30% more strength.*

Only the strong survive. That's why GNC Pro Performance® products have been around for 20 years. When it comes to building your strength, nothing complements your weight training regimen like WheyBolic Extreme 60™. Powerliftings Newest Anabolic Weapon!

A-BOMB is, without question, one of the most exciting new developments in the science of muscle growth and strength enhancement. It is the first supplement designed to trigger multiple anabolic actions while simultaneously shutting down catabolism (muscle wasting) during and after intense exercise and weight training. Muscle growth, strength gains and recovery can only occur if the body remains in an anabolic/anti-catabolic state. A-BOMB has been precisely formulated with select performance enhancing compounds, co-factors, amino acids, branched chain keto acids and branched chain amino acids to fuel your body during training. A-BOMB also utilizes a pharmaceutical 12-hour Continuous Infusion Delivery to ensure that you remain in this favorable state for maximum growth, strength, recovery and performance.

Hit Your PB with A-BOMB!

**ALWAYS THE ORIGINATOR
NEVER THE IMITATOR™**

This year's GPC World Powerlifting Championships was hosted by the newly formed GPC Great Britain, under the capable direction of Lee Marshall, the current GPC Technical Chairman. Lee and his crew did a great job of running a very smooth and on time competition. The competition was held in the town of Lemington Spa. This town has its origins as far back as the 17th century, and quite a few very scenic historic landmarks close by. Lemington Spa is about an hour and half a train ride from London, through the rainy lush English countryside. This area is also rich in powerlifting history, as the IPF held its first out of the US World Powerlifting Championships up the road in Birmingham 33 years ago. This years competition had 268 competitors from 18 countries present. The GPC also added three new countries with Brazil, Cameroon, and Australia joining the GPC as well as the USPF from America as a new affiliate.

The first day and half consisted of the bench press competition at which there were seven women and 87 men entered. In the women's division the most impressive lifter was Dagmar Liptakova of Slovakia. Dagmar, though had very long limbs didn't really look the part of a great bench presser. Dagmar's first attempt at smoking 102.5 kgs. and a second attempt at 112.5 kgs. changed our mind quickly, and a near miss with 116 kgs. on her third attempt for a try at a world record. In the men's 60 kg. class the lone entrant was an Azerbaijan lifter, Samir Mammadov. Samir made an easy opener at 120 kgs. and then jumped to 150 kgs. on his second before a World record attempt at 166 kgs. stopped him on his third attempt. The 67.5 kgs. class was a fight to the finish with Mustapha Redouani of France and Rustev Musayev of Azerbaijan with both completing in the 152.5 kgs. and Musayev winning the gold by being lighter in body weight. The 75 kg. class open division had some great competition between four lifters. Cedric Martin of France narrowed it to three when he missed his 190 kg. opener and 197.5 kgs. on his second and third attempts.

The only super heavyweight competing, Kari Kalliola of Finland

GPC World Powerlifting & Bench Press Championships as told to Powerlifting USA by Bob Packer

The contest was now clearly between the USA's Dr. Dudley Robey and two Azerbaijan lifters Ramin Rzayev and Bayram Aliyev. Dr. Robey opened at a cautious 185 kgs. and then waited for both the Azerbaijan lifters. Both Rzayev and Aliyev finished at 197.5 kgs. This left Dr. Robey for a nice jump to 200 kgs. for the win. After shaky hand-offs on his second and

Kim Packer's beautiful technique (photos courtesy of Wendi)

third attempts, Dr. Robey had to call it a day and the bronze medal. Rzayev bested his fellow Azerbaijan lifter by being the lighter man. In the 82.5 kgs. class in open, Jan Matcj of Slovakia pretty much had things to himself after Namik Jafarof of Azerbaijan missed all of his attempts. Matej went onto a third attempt world record third attempt of 218 kgs. The 90 kg. Class saw an Azerbaijan lifter, Mustafa Ahmadvev get a seam splitting 255 kgs. on his third attempt and the gold. In the masters division 45-49 Christian Kllicki of France made three successful attempts at 215 kgs., 220 kgs., 240 kgs., and tried a world record 253 kgs. on a third attempt. Klaus Kruger of Germany was a class act in the 55-59 division with four successful attempts at 200 kgs., 210 kgs., 215 kgs., and a world record 217.5 kgs. The 100 kg. class was competitive bench pressing at it's finest. Three lifters, Vladimir Flimel of Slovakia, Benjamin Brissez of France, and Ibrahim Ibrahimov of Azerbaijan. Consistent success with all three attempts at 262.5 kgs., 210 kgs., and 272.5 kgs. put Flimel of Slovakia in the gold. Brissez looked as though he could have ended in first, but jumped from a second attempt success at 262.5 kgs. To 305.5 kgs. for a world record and failed. Ibrahimov missed all three of his attempts at 265 kgs. twice and 272.5 kgs. and left the competition. This left third place to the lifter from the Czech Republic, Petr Palacky,

with his first attempt success at 170 kgs. It should also be mentioned that several of the master lifters in this class were also very impressive. In the 55-59 age group, Axel Gerdorf and Hans-Jurgen Borkowski had quite a go at it with their respective 212.5 kgs. and 200 kgs. finishes for first and second places. The 110 kgs. class was definitely the action class of the big

men. Master 40-44 saw a nice tussle between Great Britains, Jerry Faulks and Didier Michelin of France. Both lifters opened with 250 kgs., but only Michelin of France was successful. Forced to take 250 kgs. for an easy success on his second attempt, Faulks played it safe and made a fine 260 kgs. on his third for the gold. Michelin, for whatever reason, didn't care about a win and only world record, missed by 300.5 kgs. badly twice, thus ending in second place. The Open division had six lifters vying for first place, including one who bombed out the day before. Martin Baumbach of Germany proves once again that the lifter that makes most lifts at this type of competition will eventually be the winner. Completing three successful attempts of 265 kgs., 275 kgs., and 282.5 kgs., got him the gold. Staroddubskiy of Russia completed only his opener at tough 280 kgs. and missed 285 kgs. badly twice. The same Ibrahimov, who bombed out at 100 kgs. the day before was back to try his luck in this class and receive the third place bronze medal for his second attempt of 277.5 kgs. The 125 kgs. class saw Jami Ihalainen take an eye popping third attempt at 302.5 on his third attempt for the gold here. Strimie of Serbia and Alberts of Great Britain scored a distant second and third at 290 kgs. and 260 kgs. The master lifters were quite impressive in this class. Germany's Udo Krumholz and Andreas

Richter scored impressive first places in the 45-49 and 50-54 age divisions with their 235 kgs. and 230 kgs. bench press successes. Great Britain's Mick King was very impressive at 55-59 and scored a bog 260 kgs. third attempt success ans was ever so close to the big 272.5 kgs. on a fourth attempt for a world record, just missing it at the lockout. Master lifter Joachim Eulenstein of Germany, lifting in the 60-64 age group scored three great successes at 155 kgs., 15 kgs., and 175 kgs., for a gold. If I hadn't seen his score card I would have thought him to be fourty and very impressive physically. The 140 kgs. and super heavyweights was to be, or should've been dominated by the big boys from Finland. In the 140 kgs. class, Jonas Rantanen, through a scare in to us when he missed his first attempt at 340 kgs. and subsequently 350 kgs. on his second attempt. Rantanen got himself together and go a gut busting 350 kgs. on his third. Rantanen tried a fourth attempt at 360.5 kgs. for a world record, but it barely left his chest. Rantanen's 350 kgs. success left Koldovsky of Czech Republic in a distant second with 237.5 kgs., and Kadera, also of the Czech Republic, in third place with 232.5 kgs. and the bronze. The only super heavyweight entered was Finland's Kari Kalliola. Lifting only in the 45-49 age group, Kari had three unsuccessful attempts at 270 kgs. to close the 2008 GPC World Bench Press Championships. After all the usual awards were handed out by Lee and Marie Marshall, now comes the Best Bench Press awards for women and men, Dagmar Liptakova of Slovakia and Jonas Rantamen of Finland respectfully. Both of these lifters received some very outstanding looking swords and scabbards.

This year's GPC World Championships had a total of 21 women entered, but it was Julie Klosturova in the 18-19 teenage division who stole the show. This super strong teenager fro Slovakia put together a 220 kgs. squat, 122.5 kgs. bench press, and then went to work on the deadlift with a third attempt success at 177.5 kgs., and a fourth successful world record at 183 kgs. This gave Julie a total of 520 kgs. and the Teen/Junior Best Lifter award. Sabine Guillaume, lifting at 48 kgs., took the Women's Open Best Lifter award with a fine 355 kgs. total via a 130 kgs. squat, 72.5 kgs. bench press, and a 152.5 kgs. deadlift. The Master's Women's Best Lifter award went to the USA's Evangeline Keresey for the third year in a row. Lifting 0.1 kgs. over the 60 kgs. weight class limit, Evangeline lifted at 67.5 kgs. and set three GPC World Records at 65-69. Despite several stays in the hospital and three different types of surgeries within the last year, she still managed a 130 kgs. squat, 62.5 kgs. bench press, but took onl on edeadlift at 120 kgs., because of a pulled hamstring. She still totaled 312.5 kgs. This lady truly loves this sport and plans on being here next year, better than ever. Wendi Michiels of Belgium, lifting in

THERE'S STRONG... THEN THERE'S MHP STRONG!

The Biggest Breakthrough Ever in Protein—

PROBOLIC-SR's patented 12 hour Sustained Release Micro-Feed Technology and superior Critical Five Amino Acid Score (CFAAS) give you something no other protein can—a continual 12 hour supply of the most critical amino acids to stimulate muscle growth, increase strength, improve recovery and prevent catabolic muscle wasting! It is truly setting new standards in the bio-efficiency and anabolic effects of protein.

Supplies Critical Amino Acids For up to 12 Hours!

In order to achieve maximum muscle growth and strength, you must have an adequate supply of amino acids to feed your muscles. Certain amino acids, called the Critical Five amino acids—glutamine, arginine and BCAAs (Ieucine, isoleucine and valine)—are more important than others for stimulating and supporting muscle growth.

PROBOLIC-SR's engineered protein matrix of whey, casein and Supro® soy protein isolate is precisely formulated to supply the absolute highest levels of these Critical Five amino acids. PROBOLIC-SR's protein matrix also provides a fast, medium and slow "release profile," which is further enhanced with the patented 12 Hour Micro-Feed Technology, making PROBOLIC-SR the most bio-efficient and anabolic/anti-catabolic protein available.

I kept thinking about that smashed Mountain Dew can I saw in the road during my morning run. Was it symbolic to my life or just a litter bug? Four weeks ago that was my favorite drink; Four weeks ago I was thirty pounds overweight; Four weeks ago I could not run a mile without stopping three times; Four weeks ago I started Core Fitness Boot Camp Training at the YMCA.

I have already dropped twenty pounds and my morning run today was five miles; I completed the run without ever breathing hard. That first week was tough. About forty-five of us started the class at 5:30 in the morning. There was Dasher, Kahuna, Big New Yorker, everyone had a nickname and most were in shape. Nobody knew who I really was. My secret was safe and I could just be the middle age fat guy trying to get into shape. I was happy with Tampa Bay knowing me as the Balloon-man; running my art studio, decorating for parties, making balloon sculptures for the young and old. That lasted a week and then George saw me in the gym and told Sarge who told everyone.

Our instructor is Erica Stein all 5 foot nothing and tough. The respect she has earned is apparent among the more veteran of the morning torture group. She has a sense of humor that is subtle and cruel. I liked her from the start. The four day a week course is a combination of calisthenics, running, and stretching. Erica pushed all of us to the limit and tried to push us a little harder each workout. I combined

the training with a tough diet. Fruit was the daily fare followed by a balanced dinner of pasta, veggies and chicken. The weight just seemed to fly off of my BIG FAT BELLY. Injuries came during the first four weeks. A strained knee, a pulled ham string, but I kept going. I may be the fat guy, but I am still the World Class Athlete under all of the blubber.

I started noticing people in public more. Were they ever in shape and let it all go as I did? Were any of them High school or College athletes at one time? Did some of them go to the gym when they were younger and then family, career and laziness got the better of them? That is probably what happened

Deflating the Balloon-Man as told to Powerlifting USA by Rick Weil

Rick Weil, at the 1985 YMCA Nationals with Ed Coan and Doug Furnas

in many of their cases. If it can happen to the number one rated Unequipped Bench Presser in the world, it can happen to anyone. The big difference is I am doing something about it.

I rationalized the pain in my own peculiar way. There are 168 hours in the week and only four of them are torture. Getting up at 4:30 a.m. is not hard; it is the going to bed at 8:00 p.m. that is tough. Looking at the world has always been an exciting game for me. Finding the positives in a negative situation is the goal. I recall the movie "The World According to Garp" with Robin Williams. Garp is looking to buy a new home and while looking at it from the front yard, a small

single engine plane crashes into the roof. Garp quickly proclaims, "We'll take it." He then explained to his puzzled wife and realtor that the chances of that ever happening again are virtually non-existent. They will be safe here. A positive from a negative. Gasoline recently hit four dollars a gallon. I tired quickly of hearing the complaints and concocted my positive perspective. I made up a story about pushing my Big Ram pick-up that gets 14 miles to the gallon, all the way to a job.

It was pulling a trailer and loaded down pretty good. The job was seven miles away so round trip was fourteen. I further stated it took me all day to make the trip and return back to my shop. I was exhausted but I saved four dollars. Naturally people told me I was making it up and I conceded that indeed I found that four dollars to ride in air conditioned comfort, listening to the radio and making the trip in ten minutes sure seemed like a bargain. A positive from a negative.

I am not looking to break more world records. The ones I have are still holding after 22 years. Being in the Bench Press Hall of Fame and rated number one is such an honor. Life, however, keeps me humble. The past is a tool to making a better future. Therefore; I am going to continue the Core Fitness training and stay in shape. The class is four weeks on and one week off. I am running daily and dieting during this off week. I have about ten more pounds to lose and a lifetime to stay in shape. I am drinking lots of water and no Mountain Dew. The next class starts in seven days. I know I will not be the fat guy anymore; hopefully I will not be the world champion either among my peers. I will be happy to just be a part of the group with High Tower, Little Bear, Spaghetti Man and the rest. I am looking forward to Erica giving me a nickname, as is her choosing. She can call me whatever she likes and I will proudly answer "Here" during roll call. I will smile through the pain even during those insane "Fire Hydrants" Don't ask...

Weil with Bootcamp instructor Erica Stein

EVERY WORKOUT ENDS WITH DARK MATTER!

Rob Luyando
World Record Bench Press
909@275

THERE'S STRONG... THEN THERE'S MHP STRONG!

Watching Rob Luyando train is an eye opening experience. The amount of intensity he puts into every workout is mind blowing. The fact that his body can withstand so many grueling workouts day after day defies human physiology. How does this phenom of strength do it? DARK MATTER!

After every workout, Rob refuels his body with DARK MATTER— the ultimate post-workout recovery and growth accelerator. DARK MATTER takes a quantum leap forward into a new dimension of post-workout muscle growth called the ANABOLIC AXIS. The Anabolic Axis is the time and point at which insulin levels simultaneously peak with amino acids, creatine and glycogen transport into muscle tissue during the critical 1 hour period immediately after your workout. DARK MATTER blasts open the critical "Anabolic Window" faster, wider and longer allowing you to enter the ANABOLIC AXIS for the most powerful anabolic reaction ever experienced!

Increases Protein Synthesis by 600% – Absorbs Faster Than Whey – Spikes Insulin Dramatically – Maximizes Creatine Uptake and Glycogen Replenishment

MHP

I recently injured my rotator cuff and, therefore, spent more time as a spectator than a lifter at the recent USAPL Bench Press Nationals in Charlotte. Although there were some great performances, there were a greater number of bad lifts. I had the luxury of watching much of the meet from the Jury table.

As I watched the bar go from hand off to the chest, I caught myself predicting whether or not the lift was going to pass. I was surprised how often I was accurately predicting the success of each lift. What I focused on was the path of the bar to the chest. If the lifter controlled the bar on a straight line to the chest, they got the lift. If the shirt pulled them north or south, they missed.

I was recently in Columbus with Louie Simmons. Louie opened his gym (on his day off) to meet past IPF Silver medallist and friend Dave Schneider and myself to help work on my shoulder

WESTSIDE TRAINING

It's The Final Inch That Counts as told to PL USA by Dr. Larry Miller

and help Dave with his training. I asked Louie if he was the one who had recommended bringing the bar down to the chest in different positions. Lou confirmed that he prefers training in 3 positions, high, low and competition. At the time I didn't follow Louie's advice. My thought at the time was that you can't overtrain the position that the bar travels. Even if you train your bench rep after rep to go to the same position on your chest, there is still a chance that you may bench out of your groove. We are susceptible to the same problem that pitch-

ers have with their mechanics. They've been throwing for years, but all of a sudden their kick is too low or they are releasing the ball at the wrong time. So, what happens when you're out of your groove? You are probably going to be weak and not very explosive. Most of the shirts that I have worn tend to pull me south towards the abs. So, going back to what Louie suggested, you might want to start doing some benches just out of your groove. This way, you won't be as adversely affected when the shirt pulls you north or south.

Every meet I go to, I see lifter's using boards to break in their shirts. Personally, I don't use the boards and here is why. The most difficult part of the bench with today's shirts is the last inch or two above the chest. This is where you need to focus, not the 3 or 4 inches above. So how do you set the shirt for your opening attempt? Well, I wrote an article a while back on breaking in the shirts in the power rack with bands. With Monster mini bands or light bands doubled up in the power rack you can bring the bar down with some speed. You can use a very heavy weight since both the bands and the shirt are supporting much of the weight. By using speed with heavy weights you can establish a consistent groove. I think your best bet is to break in the shirt as best you can prior to a meet. Some guys put

King of the Squat!
Vlad Alhazov-Team MHP Member
1,250lbs. Squat

**THERE'S STRONG...
THEN THERE'S MHP STRONG**

It's Good to be KING!

When it comes to testosterone T-BOMB-II is King! It takes seriously high testosterone levels to squat 1,250 pounds. That's why MHP Team Member Vlad Alhazov uses the "King of testosterone formulas" T-BOMB II. What makes T-BOMB II so powerful is its exclusive hormone manipulation compound, Optimone-5. This patent pending 5-stage complex manipulates your entire hormonal profile: Cranks up testosterone 400% and destroys male-deadly hormones such as estrogen and DHT. It also crushes sex hormone binding globulin (SHBG) allowing for more of your testosterone to be "free" and bio-active to dock on your steroid receptors. Topping off this powerhouse Test formula is a proprietary 2nd Messenger Complex that enhances androgen receptor sites, allowing you to soak up and utilize even more testosterone.

POWER RESEARCH

dedicated to bringing Science to the sport of Powerlifting

Nitro-Tech® Hardcore as told to PL USA by Team MuscleTech

FEED YOUR GAINS

In the realm of powerlifting, the goal is always to add more weight to your total. However, in order to add serious poundage to any lift, your body requires critical macronutrients. That's why any experienced powerlifter knows that the key to jacking up their total is proper nutrition and supplementation. You should be flooding your muscles with tons of calories coming from a high-quality protein source. Sure, your body needs carbs and fats to help power your lifts, but in the end it's the amino acids contained in protein that act as the foundational building blocks for huge strength and mass increases. This build-up of strength and mass is the direct result of anabolism that occurs in the body.

Anabolism is technically a set of metabolic pathways that result in the construction of molecules from smaller units. Therefore, this anabolic process takes the protein you have ingested and turns it into the strong, dense muscle you require to increase your total. Since protein is so critical to muscle and strength growth, one would then conclude that any protein is just as good as the next, right? Wrong. In the grand scheme of things, all proteins were not created equally. Although each does have some sort of advantage, there are very clear-cut choices as to which protein sources are superior to others.

GOAT PROTEIN

Although once touted as the perfect protein, this claim has come under fire for being misleading and based solely on marketing hype. One myth that people commonly hear about goat protein is that it has the highest Biological Value (BV)—a measure of protein quality. BV measures the amount of nitrogen retention caused by ingestion of proteins by analyzing the amount of nitrogen that is expelled from the body after being consumed. Originally, this scale was based on eggs, therefore eggs were given a value of 100. Some companies claim that goat protein has an even higher BV, 104 to be exact, and is often heard, in some marketing campaigns, to have the highest BV of any protein. However, this has not been substantiated by real science. Actual scientific research shows that whey protein also has a BV in the neighborhood of 104!¹ As far as goat protein goes, don't waste your money on an ingredient so lacking in hard clinical data.

EGG PROTEIN

As noted before, the BV was established on this highly touted protein source. But as time goes on, knowledge and technology make great advancements and things change. The same applies to the knowledge behind this once-legendary protein source. The BV scale was established based on an egg being an ideal protein source. But as whey protein became more popular in the mass market, it was discovered that it had an even higher BV than egg protein!¹ On top of all this, egg protein tends to digest much slower than whey protein,²

so it's not the best choice for the most critical musclebuilding window immediately post-workout.

REGULAR WHEY PROTEIN

This is the most popular choice for many experienced athletes around the world. Regular whey protein has truly earned a reputation as the be-all and end-all of essential protein supplementation. Whey protein, which is derived from cow's milk, has one of the highest BVs of any other protein source¹ and is chock-full of all the amino acids your body requires to pack on more strength and mass. The problem many athletes face today is choosing a protein in a saturated market. The choice has become much easier because scientific research has found a superior whey protein formula that blows regular whey protein out of the water!

142% MORE STRENGTH with Nitro-Tech® Hardcore!

Nitro-Tech Hardcore is a revolutionary protein formulation that has been scientifically shown to be far superior to regular whey protein! In fact, it is so advanced and effective, it's America's #1 musclebuilding protein. Developed by Team MuscleTech™ researchers, Nitro-Tech Hardcore is loaded with three musclebuilding blends that are designed to amplify strength and muscle gains, fast. And what's more, a precise portion of protein particles have been pulverized to be up to 7,400 percent smaller than regular protein particles. This delivery technology is scientifically engineered to deliver key amino acids to muscles faster than regular whey protein.

To prove how effective this formula is, Team MuscleTech™ researchers organized a third-party, double-blind, placebo-controlled study at a state-of-the-art research facility. The results showed that Nitro-Tech Hardcore test subjects gained an average of 34 pounds on their bench press in just six weeks! Regular whey test subjects only gained 14 pounds. This is a dramatic, 142 percent greater increase in bench press strength in a matter of weeks! And these clinical results merely represent the average of the test subjects' results! In fact, one extraordinary Nitro-Tech Hardcore test subject added 60 pounds to his bench press!

The scientific results are as obvious as your choice should be. Nitro-Tech Hardcore is clearly superior to regular whey protein for building strength and mass, fast! If you're ready for the best scientifically studied methods to add more weight to your total, then you need to get Nitro-Tech Hardcore the number one choice of whey protein for powerlifters worldwide.

ZERO WAIT-TIME PRE-WORKOUT FORMULA

Jacks Up Strength FAST!

As a powerlifter, you know there are no such things as "light days." Every time you step into the pit you're after big numbers – it's make or break. Your ultimate goal is to crush your previous best lifts. This unforgiving sport can drain you physically and mentally. When you step up to the platform, your muscles need to be primed with endless strength and power and your mind needs to be focused to the point where every lift feels light.

There are a ton of supplements out there to choose from, but many lack the scientific support to yield any kind of noticeable results. That's why Team MuscleTech™ researchers engineered naNO Vapor™ – a zero wait-time pre-workout formula, ultra-dosed with scientifically researched ingredients that will make you stronger. With over 60 cutting-edge ingredients infused into six extremely powerful blends and backed by countless stacks of scientific research, you'll stimulate all the anabolic, neurological and metabolic pathways necessary to crush another PB. Join countless powerlifters that have made naNO Vapor America's #1 selling pre-workout nitric oxide formula and feel its vaso-anabolic power that will make you bigger and stronger, faster!

America's #1 Selling Pre-Workout Formula

Before I begin Day Two of the PRO division, I want to list all the sponsors: Westside Barbell, Powerstation Gym, Chad Norvell of Norvell's Landscaping Inc., American Fighter, McDonald Insurance, At Large Nutrition, Dan Johnston, JMI Inc., Legend Fitness, Ginny Phillips, APT, Karen Extreme, Healthy Image, Power Barr, Queen City Racknet and Fitness. Mike Ferguson would also like to thank all volunteers that helped to make this meet such a great success. Author's note: We've witnessed some disasters at the national level over the past ten years, but the 2008 PRO/AM spotters were incredible. They stayed in close without interfering. Even when the bar was loaded to 1,000 pounds or more, not a single lifter or bar hit the floor - truly outstanding work.

At the close of Saturday's PRO/AM, we left the convention hall with Doris Simmons. Most everyone leaving the venue appeared energized with the first day of the pro meet. Downstairs in the main lobby the behemoth SHW Matt Smith stood with a few others. You can always spot Matt in a crowd. He was disappointed he could not compete because of a neck injury, but still drove down from Columbus to help spot Westside Barbell team members, Greg Panora, Tony Bolongne, Dave "Neutron" Hoff, Luke Edwards, Shawn Nutter and from South Carolina SHW, Donny Thompson. In 2001-2002, Matt was one of the first successful Westside powerlifters to enter the WPO through the APF.

To give you a sense of how well Saturday ran, when I looked at my watch the time was just 3:30 PM; my God - the sun was still out. Later that evening we would have dinner with Matt, Bob Youngs, his wife, John Bott, Matt Wilson, Dan Dague, Mike Stuchiner, Lisa and Ken Wheeler, and a few other lifters. I want to mention that 165, Lisa Wheeler competed in the Amateur division on Friday and squatted a PR 500 lbs.

I had not eaten during the meet Saturday. Although the strip mall restaurants were convenient, they just weren't enticing. We ended up driving about 20 minutes to Argosy Casino and Hotel in Lawrenceburg, IN. The casino floats on the Ohio River. We ate at the "Passport Buffet" - excellent! I just want to thank our waitress, top notch, and all the guests that gorged themselves on macaroni & cheese, deep pan pizza, salad, hot buns & butter and Jello, leaving all the Maine rock crab legs and shrimp for me. I really appreciate that.

The following morning we arrived at the hall around 8:30 AM. Posted on the wall

Mike Cartinian won some cash

Power Station PRO/AM Pt. II as told to Powerlifting USA by Scott DePanfilis

Charles Bailey - lifting big at 44

in the warm-up area was the order of the two flights. The first flight was the 220s up to 242. The second flight consisted of the 275s up to SHW. The meet began and for many the strategy seemed to be "extreme" heavy openers, like last year. At least nine competitors were opening at over 1,000 in the squats, astonishing. After the dust chalk cleared, eleven competitors bombed out; a majority, during the squat. The overall winner and placement was by formula, however, this report is based on the lifting order. First on the squat platform was 242 Chris Taylor. Chris has had a roller coaster lifting career. We first met him ten years ago. At the time, he was known for his 700 plus bench, but over the years Chris developed into a full-power force to be reckoned with. Chris had a heart attack in June of 06, and then made a miraculous recovery. We've seen Chris compete as heavy as 308, but he appears comfortable at 242. At this level of competition, Chris appeared confident, fueled by a higher power. His numbers were 855, 750, and 680 deadlift. He finished the day with a 2,285 total.

Up next from Pennsylvania was 220 Dan Blankenship. Dan trains Westside, but the pressure was on with 220 Clint Smith, Larry Hook and Mike Schwanke waiting in the wings. Last year, Dan didn't get his squat passed, but this time he did. Dan began with a strong 825 opener; but two attempts with 875 were not successful. He went on to bench his 540 opener, and then repeated a 660 opener, got it! His final total 2,025. These days we take for granted the poundage and totals. Who'd ever believe we'd witness over a half-dozen 1,000 pound squatters in the middleweight division or bench presses exceeding 700 lbs. on a regular basis?

Out of Finland 220 Ilkka Mursu was next, from Finland. I can't imagine having to compete after traveling so far. Ilkka struggled with his first two squat attempts with 825 lbs. He got a little forward on his opener and wisely caught it in time to repeat the lift, but no luck. Finally on his third attempt, he moved his feet out a little wider and went down and up. No problems at all during the bench and deadlift event. Ilkka pressed 675, and had a magnificent pull of 760. He attempted an 800 pull, but no go! He totaled 2,260.

Up next out of Oregon was 220 Larry Hook. We first watched Larry compete at the 2006 WPO Middleweights in Lake George, NY, and I think also at the WPO.

Super intensity, highly conditioned, Larry was certainly a stand out, even with the likes of Shawn Frankl and Brian Carroll in the same weight class, arguably the greatest assembly of 220s ever. Fast forward to the PRO/AM, Larry opened with 850. At the top of the lift, right after the front judge said squat, Larry looked like he double pumped the bar during the descent, and even though the lift looked clean at the bottom he was red lighted. On his second attempt, Larry went to 925, which he's capable of. The squat was a little rushed and the bar never settled on his massive shoulders. When the front judge called "squat", Larry fell forward and the spotters jumped in for the save. Larry repeated the 925 on his final attempt, and wound up falling backwards into the back spotter. That was it, bad break, he certainly looked like he was more than ready to do some damage in the 220 weight class.

Next up out of California and Diablo Gym was 242 Dalen Randa. Dalen competed in the Power Station AMs last year, and after fighting through some tough lifts, missed three attempts with 615 lbs., in the deadlift. On this day, Dalen opened with 850 lbs. He took it off the rack, and began to descend. His form looked solid at the bottom, but then his hips gave out. He may have lost his concentration, tough to say, but the spotters jumped in. On second and third attempts he looked exhausted and was out. Out of Ohio, 242 Shawn Nutter was next. Lifting on the Westside Barbell team Shawn opened with 855, a little wobbly at the top, but down he went, just not low enough and he received red lights. Shawn repeated the lift on his second attempt, strong, no problem there, but 910 was a bit rushed, he actually had to regroup after a faulty start, but the bar

Sergiy Karnavkhov of the Ukraine

Chuck Fought - lifting big at 22

drifted forward throwing Shawn off balance. He yelled out "take-it." The spotters moved in quickly. Benching went great: 585 and 610 on his third attempt, terrific execution. Shawn opened with a 655 deadlift, no problem. He jumped to 715, got it up to his knees, but it came back down. He kept the weight the same, and this time Shawn completed the lift, but I'm guessing his knees weren't locked and he got red-lighted. Shawn ended up totaling 2,120.

Out of Florida, lifting for Team Samson, 28, Clint Smith was next. At 220 Clint opened with a deep 855 squat, and although his second and third attempt looked picture perfect at 885, both proved to be a little too heavy. Clint is another gifted bench presser and produced a tremendous 725 opener. He tried 780, but missed it twice. During the deadlifts, Clint opened with 710, and then pulled 740. He totaled 2,320. Thanks to the Schwartz coefficient, Clint found himself in the upper middle of the pack, great job. Next up was another Floridian, lifting out of Orlando Barbell, 242 Jo Jordan; an all around solid lifter, great attitude on and off the platform, and sponsored by Elite Fitness Systems. We've watched Jo compete during the APF Southern States, and the APF Seniors. His numbers keep going up. During this PRO/AM Jo Jordan totaled 2,305 lbs. He began with a 910 squat opener, followed by 950, but he drifted back, and wisely shook his head for spotters to take it. He came back out to repeat the lift, and this time nailed it! It looked really solid. I see 1,000 pound squats in Jo's competitive future. During the bench, Jo pressed 615, 635, but missed 660. He cruised mightily through the deadlifts 655, 700, and 720 - somebody did his homework!

The next powerlifter was from Iowa, 26, Jeremy Frey. Weighing 242, but appearing much larger, mainly because of his huge legs, Jeremy impressed a lot of coaches/trainers and was also sponsored by Elite Fitness Systems. Take a look at these numbers, 940, 740, and 770, with a 2,450 total. It didn't hurt having bench "Phenom" Rob Luyando coaching. With current champions Greg Panora, Brian Carroll, and Jim Grandick hitting between 2,500 and 2,600 totals, Jeremy had his work cut out for him. We think he's got the potential to set some records in the near future. Jeremy attempted a 1,000 squat; and also an 800 pull; he's ideal for sponsorship! Another lifting stud was 220

(continued on page 88)

A New Breed of Multivitamin

You already know that taking a multivitamin every day is a smart choice. That's why Anabolic VITAKIC™ is designed to deliver a cutting-edge micronutrient multivitamin complex specifically for hard-training powerlifters. This complex includes multiple key micronutrients that protect cells from the damage caused by unstable molecules known as free radicals, making it extremely beneficial to any lifter. In addition, Anabolic VITAKIC is dosed with a key musclebuilding compound, forging the foundation for explosive muscle growth and strength!

Why You'll Want to Experience Anabolic VITAKIC for Yourself

With Anabolic VITAKIC, your micronutrient needs will be covered, while at the same time a key musclebuilding compound is engineered to ensure you continue to build more muscle and strength and help to greatly improve your max bench. What's more, a precise portion of this powerful key ingredient will be hyper-shuttled to your muscles via a pharmaceutically inspired delivery technology!

It took a potent combination of over 100 micronutrients, powerful antioxidants, amino acids, coenzymes, trace elements and essential vitamins and minerals before Team MuscleTech™ researchers were satisfied that Anabolic VITAKIC was up to their highest standards. Now, hardcore lifters, and IFBB pros, are choosing this revolutionary formula to help them get absolutely jacked.

So if you want to accelerate your muscle growth and strength faster than you ever thought possible, get the World's Most Hardcore Musclebuilding Micronutrient Multivitamin Complex scientifically engineered for today's powerlifters - Anabolic VITAKIC.

THE BUILDING BLOCKS FOR MASSIVE MUSCLE

CB: Brian it's an honor to conduct this interview. I've seen you compete first hand a few times now. Very impressed with your 2535 Total @ 242 from the APF Intramural Meet in GA. Highest total of the meet, congratulations! Brian Carroll: Thank you Mike. I appreciate your time and support. I had a decent meet and did ok going 6-9.

CB: How long have you been powerlifting? How did you first get started in the sport?

BC: I did my first meet March of 03 and started training for it that January. I totaled 1752 @ 220 via 705, 424, 622. I had a friend tell me I was doing the meet, so I said ok, and went and did it. Haha

CB: That's the way to start, just dive right in. What weight classes and federations have you competed in? Have you always competed equipped?

BC: Mostly APF. I have done some WPO and one IPA meet. I have only competed in the 220 and 242 pound weight classes. Yes, my meets have always been geared. I have no desire to compete raw. The best compete geared, so that's where I choose to lift.

CB: What is your favorite lift out of the three and why?

BC: For the longest time it was the squat. Now, I'm starting to really like benching. I have had my times of really liking the dead, but that just depends on how it's moving at the time.

CB: What was your all-time favorite moment so far in your powerlifting career?

BC: I would have to say my favorite was breaking the all time world record squat at the WPC Worlds in 2006 with 1030 @ 220. I wanted to break it so bad for a while and was thrilled when I made it happen.

CB: I can see that being a huge emotional high. Brian, every lifter is different when it comes to getting motivated for a big lift. What goes through your head moments before you step on to the platform?

BC: I just try to remember to keep my form and not get too crazy and screw the lift up.

CB: You train with Team Samson. Tell us about the atmosphere, what your teammates are like and what you've learned since you started training there. How did Team Samson Powerlifting start?

BC: It's a great atmosphere where we train! My teammates are great to me and we have a very friendly, anything goes atmosphere. We all give each other so much crap, but we are there to better each other

INTERVIEW

BRIAN CARROLL - TEAM SAMSON
by Mike Westerdal of CriticalBench.com

Brian Carroll can move almost unheard of weights in the squat

and we know that. TSP started at the middle of '03 with Adam Driggers, Tony Garland, Brandon Tripp, and Shane Shepard. I joined shortly after in October of 03 and we became an official team around the end of the year.

CB: How important are your training partners? Could you have reached the level you are without them?

BC: They are very, very important to me. I couldn't even be close to where I am without them. No, I couldn't do it without them.

CB: What does your training regimen consist of? Do you take any time off during the year? How many days a week do you train? All powerlifting or do you any bodybuilding exercises? Break it down for us, we're dying to know!

BC: Typically I train four days a week I train bench on Mondays and upper back on Wednesday. Thursday I train light chest and shoulders, Friday I train the squat and dead. The Wednesday and

Thursday training sessions are more body building exercises, while Monday and Friday are the heavy days. I like to take 2 heavy days then follow it with a light day, that way I don't beat myself up too much.

CB: What are your best lifts in competition and in the gym?

BC: Competition: 1052 squat, 733 bench and 771 dead. Gym: 1100 squat, 750 bench and 800 dead.

CB: Holy mackerel. You're the 2nd ranked 242er of all time when it comes to your total. How hungry are you for the #1 spot? Any other records you are proud of?

BC: I am very hungry for the #1 spot. I know that Greg and Jim are so tough and well rounded that I will have to be spot on to have a chance. I still have the WPC/APF world record for the 220 open squat, multiple junior world records in the WPC/APF and all of the Florida state records @ 242 except for the bench.

CB: Impressive. This is an inter-

view by Critical Bench and we are talking to a 700 Pound + Bench Presser. What tips or advice can you give the readers to give their bench presses a boost?

BC: Train heavy and hard. Work every aspect of the lift. Off the chest, lockout, etc. Keep plugging away, but at the same time, don't be scared to change things if they stop working. Don't be too cool to take advice from anybody, especially top and experienced lifters.

CB: As a WPO competitor how do you feel about the USAPL taking over at the Arnold? What do you think is the biggest geared meet of the year that the best of the best compete at?

BC: I feel that the USAPL is boring and I wouldn't want to watch the meet at the Arnold. The Pro-Am is the biggest and baddest around right. Louie does an awesome job with it and that's why it's such a huge success.

CB: Brian, use your crystal ball and look into the future 5 years from now. What is the all-time world record equipped and raw bench press?

BC: Geared: 1150, raw: around the same .. and Kennelly will have both.

CB: What advice would you offer a young lifter wanting to get started in the sport that you wish you knew when you first started out?

BC: Listen to the guys who know their stuff. Listen, listen, and listen more. I hate new guys that don't want to listen, but act like they want to get better or bitch about their lifts not being top level in just one year of lifting.

CB: Powerlifting is still pretty much an underground sport. Do you like it this way or do you hope that one day its gets more exposure and becomes as popular as other extreme sports?

BC: I don't like it being so underground. I hope that one day it gets to be a popular extreme sport!!!! It is such a great hobby/sport and it's a shame its not more mainstream and popular.

CB: If you could change one thing about the powerlifting community as a whole, what would it be?

BC: Less complaining and crap on the net.

CB: What's your diet like? Do you take any supplements?

BC: I eat often and not so clean. I eat lots of chicken, rice, potatoes, beef, sandwiches, burritos, pasta, dairy products, and protein shakes. I also supplement with Hypergain Creatine and Nitroboil. I have

"NASA HALL-OF-FAMER & MAY 2008 PLUSA COVER BOY J.T. HALL BREAKS 15 PR'S IN JUST 30 DAYS ON USPlabs PRIME!"

"In 30 days, I set more than 15 personal records (pr). My biggest PR is a 680 reverse band bench press and a 455lb x 3 flat barbell bench press. I'm a drug tested national/pro bench press competitor and always looking to get the advantage over my competitors. If you want to set some big PR's in a short time, I highly suggest get several bottles of USPlabs Prime!"

J.T. Hall - NASA Hall Of Famer- 8 time PLUSA Top 100 Bencher 1999-2007

STEROID-LIKE STRENGTH, YET COMPETITION LEGAL?

USPlabs has hit the motherload...

A product that delivers massive strength & recovery, on par or better than pro-hormones (and even mild steroids), yet is completely legal to use in ALL competition because it's:

- A. 100% Natural
- B. Won't skew hormones & cause failed drug test or false positive.

I know, I know...it sounds WAY good to be true...But, if that was the case, why are powerlifters setting PR's virtually EVERY workout?

There's NEVER been anything like USPlabs Prime before...A potent natural anabolic that delivers all the goods, yet none of the sides...

- **Permanent Muscle Gains** - Hormonal levels are not affected, therefore there's no drop-off - What you gain is yours to keep! Permanent Muscle Gains - No "rollercoaster" effect.
- **Enormous Strength Gains** - Own The Weight Room...Own The Platform!
- Increase your lockout, PRIME will allow you to press harder for longer - Can you imagine training without sticking points!
- **Does not cause shut-down** or suppression - NO Post Cycle Therapy required!
- Promotes Muscle Gain of **Thick, Dense** Variety - Sport that full, 'on' look!
- **Extremely Potent Re-composition Effects** - Even test subjects consuming 750-1000 calories a day ABOVE baseline lost bodyfat while gaining mass & strength!
- **Incredible Recovery Speed** - Feel like you've had a two-week layoff - even the day after the most intense workout of your life! Overnight recovery, be ready to train the very next day. No more sore days off. Recover from GPP work instantly. Do not skip any more workouts because you are 'too sore'.
- All-Day Muscle Fullness/Hardness - **Your Muscles Will Feel Like Granite!** - Pumps that do not negatively affect strength/performance like N.O. boosters...
- **Balls-To-The Wall Training** - Train harder and longer than you ever have - and like it!
 - Aggression and drive like never before, feel the rage
 - Fight yourself to leave gym and/or take an off day
- Incredible Euphoria - **Feel Like Superman!**
- **ZERO Bloat** - Increase vascularity - even while gaining mass & strength! **No puffy look, rock hard**
- Safe to use in all competition - all-natural ingredients - **WILL NOT** cause positive drug test! Complies with. This is the product that they don't want you to know about. With the ability to train more frequently, **have a HUGE step up on the competition.**

PROVEN BY SCIENCE!

In a 30-day pilot study using experienced lifters, the strength gains were simply mind-blowing. The best gains were 81 pounds on a 3RM squat and 62 pounds on a 3RM bench...in just 30 freakin' days! And the results get better the longer you use it!!!

DEMOLISH Your Current PRs.

ZERO NEGATIVE SIDES

Wait, did I mention there are ZERO side effects?

That's right, none of the nasty sides that come along with pro-hormones or steroids. No depression, no lethargy, no trouble sleeping, no PCT, no bloating, no breaking the law/rules...

Just AWESOME strength, lean mass & recovery that will send your totals skyrocketing!

Combine USPlabs Prime with your bad-ass training and completely dominate your gym. It's really that simple. Easy to take, too. Simply take 2 caps, 3 times a day with food - That's it!

Best,
Jacob Geissler - CEO USPlabs

P.S. Even if you use "prescription anabolics", Prime is the perfect bridge with PCT between cycles. In fact, you'll be able to maintain, and even gain strength when you're "off".

P.P.S. Little "Instant Strength" trick...If you need to gain a lot of strength in a very short period of time such as pre-comp, "load" 9 capsules of USPlabs Prime a day for a super-charged anabolic effect. Even at 9 caps a day, there's still no negative sides!

www.USPlabsDirect.com

IMAGINE TRAINING WITH YOUR CURRENT PR'S ON SPEED DAY!

Unbelievable 100% Risk-Free PR Guarantee

If you truly want to have THE best training experience of your life, I HIGHLY suggest you give USPlabs Prime a shot for 6 weeks. I want you to shatter your previous best while using our product. Why? Because I know once you do, you'll tell everyone about your awesome experience. I'm going to make this a "no-brainer" & take ALL risk away from you. Give USPlabs Prime a legit shot for 6 weeks. If you don't hit at least 1 major PR (most are hitting 3-5 NEW PR's or more) I'll refund every last cent of your purchase price. That's a pretty ballsy statement. And I'd be an idiot to offer it if I wasn't completely sure how much USPlabs Prime can help you.

The Making of a POWERLIFTER!

as told to Powerlifting USA by Travis Bell and his Westside Odyssey

The thought of Westside Barbell and its iconic owner, Louie Simmons, can be an intimidating one for many an aspiring powerlifter. As we all know, thoughts and myths sometimes stray far from reality. For those who know Louie, or who have met him, they will tell you that he is one of the most accessible men in his field. Louie is a busy guy, but he is known for taking a few minutes out of his hectic days to dole out training advice to those who seek it via a phone call to Westside. So it was with Travis Bell...

Travis Bell was exposed to the iron game at an early age. His father trained at home with weights as far back as he can remember. As so many young men do, Travis wanted to emulate his father and began lifting weights on his own at the tender age of 12. At 16 he was given a membership to the local Powerhouse Gym franchise along with some training sessions from an ex-bodybuilder. Those sessions lead to his early interest in the sport of bodybuilding. Travis did well in the sport, but quickly concluded the grueling pre-contest dieting required was just not his cup of tea.

Enter powerlifting. Travis was highly competitive by nature and knew he loved the iron, so powerlifting was the obvious choice as it did not require the aforementioned starvation diets. Early success only proved to fuel his fire with a win in his very first meet (a solid 320 lbs raw bench in the 181 lbs class).

His early success quickly devolved to training frustration. He had obtained a single ply bench shirt and was struggling with it. The nuances of geared benching eluded him, and he simply did not have access to the proper help. As often happens, fate intervened in the form of a recommendation from a friend at home that Travis check out the Westside Barbell website (www.westside-barbell.com). Travis did just that and was amazed to find that he had arguably the greatest powerlifting mind and resource in the world literally only a 1 hour drive away!

With some trepidation (remember the Westside intimidation factor) Travis decided to give Westside a call. To his surprise, Louie himself got on the line and spoke with him. Showing some of the steely resolve that makes him such

Travis Bell (image above) and contemplating his next move (below)

a fierce competitor, Travis had the gumption to ask Louie if he could come to Westside for some direct training advice. Louie agreed, and the next phase of Travis' powerlifting evolution had begun.

Travis recalls well his first Westside visit. Perhaps it was nerves, but getting lost 3 times on his way to Westside did not bode well for the budding powerlifter. He finally arrived at the gym. Taking a few moments to collect himself, he entered Westside with visions of a crazed, super-intense and frightening Louie Simmons impatiently awaiting him (despite their amicable phone call days earlier). Nothing could have been further from the truth! Louie was indeed awaiting his arrival, but instead of being angry and intense he was filled with energy and excitement! He was ready to work with this newcomer and to do as he always does, school him in the ways of

Halbert, Mike Wolfe, Greg Panama, Matt Smith, and Phil Harrington just to name a few) threw his way. Below is the resultant training template he currently follows:

Monday: Back and Shoulders; **Tuesday:** Light Biceps; **Wednesday:** ME Bench; **Thursday:** Squat; **Friday:** Back and Shoulders; **Saturday:** DE Bench; **Sunday:** Off.

As you can see, Travis is a bench specialist, but he trains his entire body.

For the uninitiated, ME work consists of the lifter warming up to a 1 repetition maximum (1RM) personal record (PR) attempt on a given exercise which is rotated weekly usually for 3-4 week cycles. The rotation of exercises is referred to as the conjugate method. The conjugate method allows for weekly 1RM attempts without overtraining via the fact that variations, even small ones, in different exercises tax the central nervous system (CNS) differently thus precluding neural stagnation which is one of the primary underlying factors of generalized overtraining.

DE day usually consists of speed work. Speed work for the bench press consists of 3 reps completed in a target time of 3 seconds or less. This timeframe mimics that of a 1RM attempt (as 1RM attempts are slower by definition) thus allowing the lifter to train their nervous system to fire explosively in less time than it takes to perform a 1RM. Resistance used for speed work should be no more than 60% of one's tested raw (no special bench shirt) 1RM, or 55% of one's tested equipped 1RM. The use of jump stretch bands and or chains is recommended (see www.westside-barbell.com) to provide for accommodating resistance and thus to overcome the inherent limitations of the barbell.

A recent ME Wednesday for Travis:

FOAM PRESS

Travis: "I've never done these before so it was a new experience for me. I must say I really liked them! All sets were done raw with a medium grip (pinkie on the ring)." 135x8; 225x5; 315x3; 405x1; 495x1; 585x1; 675x1; 725x1; 765x1; 815x1; 835x1.

"I then moved my grip in a bit (about thumb length from the smooth part of the bar) and did some foam presses for reps." ... 500x10; 500x10.

"Next was some triceps work. I did what we (at Westside) call

Panora Presses. These are named for Greg Panama, one of the top powerlifters in the world. They are basically a triceps rope pressdown with a range of motion (ROM) which is limited to the bottom half of the movement." 80x10; 80x10; 80x10; 80x10.

Pec Deck: 140x15; 140x15; 140x15; 140x15.

TRAVIS' DIET AND SUPPLEMENTATION

Like most powerlifters, Travis does not follow a regimented diet in the classic sense of calorie counting and the consumption of specific foods at specific times. Travis is a lifter who has a hard time putting on and maintaining a body weight thus he consumes a minimum of 5, and up to 7 meals per day. The meals consist of high protein, calorie dense foods such as

meats, eggs, whole milk, and just about anything else that he feels will add to his daily calorie count and be of some benefit to building size and strength.

Travis' supplementation regimen is a direct result of his affiliation with Westside Barbell. Louie Simmons personally uses, endorses, and has his athletes take AtLarge's supplements. Louie's

(and the other lifters at the gym) endorsement was good enough for Travis. He tried some of the products and was hooked! About a year after initially trying the products Travis was offered a sponsorship and is now one of an elite group of strength athletes sponsored by AtLarge Nutrition, LLC.

Travis performing a Panorama Press to focus work his triceps

Travis' daily supplement intake includes the following AtLarge Nutrition (only available at www.atlargenutrition.com) products: Nitrean, Opticen, ETS, RESULTS, Multi-Plus; Fish Oil.

Here are Travis' thoughts on the products in his own words:

"I feel that a high protein intake is vital for powerlifters, so I supplement 200g+ of Nitrean daily in addition to the protein I get from solid foods. Opticen is my supplement of choice for post-workout purposes. ETS, RESULTS, Multi-Plus, and Fish Oil are all taken daily. I honestly cannot say enough about RESULTS. I've been taking it for almost 3 months now and I've never felt this strong before! I typically hit PRs on ME day, but

right now they are coming in much bigger jumps than before. I recover faster and have gotten significantly bigger. What more could you ask for from a supplement?"

WRAP

Travis entered Westside a neophyte powerlifter with a burning desire to be the best. His accomplishments thus far have far exceeded his wildest dreams. Follow the Westside template (www.westside-barbell.com), make sure you are consuming sufficient calories for growth, use the best supplements on the planet (www.atlargenutrition.com), and perhaps you too can blow away your powerlifting goals!

New Product

Introducing the "EO Extreme Board Vest" -the ONLY Patented Powerlifting Board Vest on the market today! Whether you train alone or with a group, this vest can be easily adjusted to fit any body type. With 3 different sizes available and several designs and colors, let the EO Board Vest become a staple product of your bench training. The safest way to do RAW and Shirted Extreme Board Bench Pressing. Can be utilized by the beginner up to the advanced athlete. The new bench shirts of today require more extreme strength and lock out power. The EO Board Vest will increase those areas of your bench press for NEW Personal, State, and National Records! With a collapsible pouch, the EO Board Vest can hold from 1 to 6 boards easily. For further info contact Niko Hulslander, Garage Ink Powerlifting, 717-779-5622, www.eosportsgear.com

Why did I choose the name All-World Deadlift Routine? Well, first, it sounds good. But seriously, over the years and specifically for this article I have solicited input from, and studied the routines of some of the best deadlifters and deadlift technicians in the world (men like Bruce Greig, Spud, Eddy Coan, John Mathieu, Damian Osgood, Louie Simmons, Brad Gillingham, Jon Kuc, Andy Bolton, Scorpion, Vince Anello and many, many more).

The deadlift is the powerlift which has seen the lowest percentage and absolute increase in the last 2 decades. The records now compared with the records of 10 or even 20 years ago are only marginally higher, especially relative to the increases we have seen in the other 2 powerlifts (the squat and bench press). Why? The primary contributors are a combination of training methods and equipment. The powerlifting gear of bench shirts and squat suits provide much greater aid to their respective lifts than any deadlift suit. The training methods which have come into vogue in the last decade or so have de-emphasized or even eliminated heavy contest-style pulling as a regular part of one's training, thus having (in my opinion) a retarding effect on the advancement of the lift as a rule.

Powerlifters from Finland are some of the best deadlifters in the world. It is no coincidence that one of the primary focuses of their famous Finnish Deadlift Routine is the incorporation of heavy pulling every week. This concept is in line with the concept of motor learning and the fact that optimization of demonstrable strength can only occur when maximal neural adaptation to a specific movement has occurred. It flies in the face of the idea of not deadlifting to improve one's deadlift. **INCREASE YOUR BENCH WITHOUT BENCHING** sounds silly, doesn't it? NO

WORKOUT OF THE MONTH

The ALL-WORLD Deadlift Routine as told to Powerlifting USA by Brent Howard

Powerlifters from Finland are some of the best deadlifters in the world. It is no coincidence that one of the primary focuses of their famous Finnish Deadlift Routine is the incorporation of heavy pulling every week. This concept is in line with the concept of motor learning and the fact that optimization of demonstrable strength can only occur when maximal neural adaptation to a specific movement has occurred. It flies in the face of the idea of not deadlifting to improve one's deadlift. **INCREASE YOUR BENCH WITHOUT BENCHING** sounds silly, doesn't it? NO

ONE would try that routine, now would they?! So why should the deadlift be any different? Answer: IT ISN'T! THERE ARE NO MAGIC ROUTINES OR SUPER GEAR TO PUSH THE DEADLIFT UP INSTANTLY. IT TAKES HARD WORK!!

My own training has led to what I consider to be a happy medium between the Finnish concept (which includes a more or less standard form of periodization) and the use of special apparatus (such as bands and chains) and exercises. I have tried many routines, and early

in my career the standard periodization worked wonders for me (getting me to 700 rather quickly), but I had to come up with something else to push well into the 700s and more. In addition to the Finns, I have studied the methods of the greatest individual pullers of yesteryear, guys like Jon Kuc and Vince Anello. They developed incredible pulling power without ever using a band or chain. Ease off your pulling to rest your CNS??? Can you imagine a training article by Kuc or Anello encouraging such

nonsense?

The following program I have developed and outlined should be considered one of deadlift specialization. It will generate awesome results provided the trainee is willing to let his or her squat and bench take a back seat for the entire training cycle. This is a DEADLIFT program designed to dramatically increase your pull!

The All-World Deadlift Program

EXERCISES:

REVERSE BANDS: This movement incorporates blue jump stretch bands (you can buy them at: <http://www.westsidebarbell.com/bands.htm>) hanging from 5'6" from the floor (per Louie Simmons' recommendation). To gauge their setup you can hang a 135 lb. barbell and it should just touch the floor. This movement takes advantage of the lightened method which allows for lockout-focused training.

AGAINST BANDS: Uses purple bands for the majority of trainees with advanced pullers (650 lbs. and up) using green bands. Anchor the bands using a jump stretch platform if available. If not, be sure to anchor the bands to the floor or just above it. Double up the bands on the bar for maximized resistance at the top of the movement. This form of training provides for another lockout-focused

variation.

BOX PULLS: The barbell is rested on 5" blocks of wood (one on each end). This provides for a partial range of motion (ROM) movement and supra-maximal loads.

HEAVY = Specified repetition max for the day

MEDIUM = 10-15% lighter load than "heavy" above

(continued on page 90)

NEW TESTOSTERONE COMPLEX REVEALED!

WARNING: NEVER EXCEED RECOMMENDED DOSAGE

MUSCLETECH
Research And Development

NEW!

Based on Research at University of Connecticut

CRYOTEST™

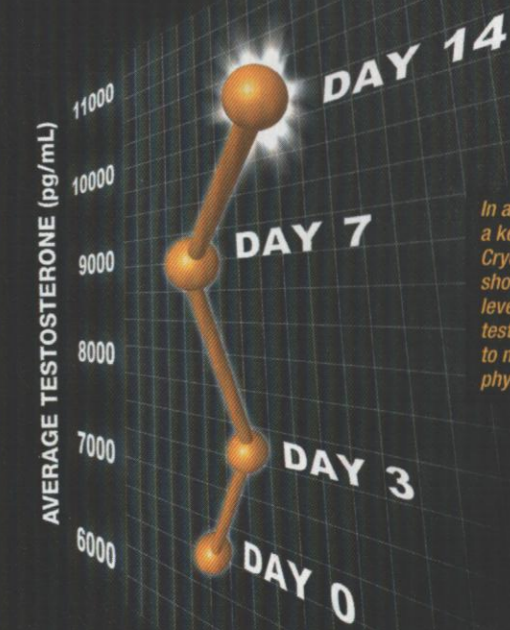

WORLD'S MOST HARDCORE ANABOLIC TESTOSTERONE AMPLIFIER

- Increases Testosterone to Maximum Physiological Levels ^{*,†}
- Drives Anabolically Active Testosterone Directly into Muscle Cells ^{*,††}
- Lowers Unwanted DHT ^{*,‡}
- Also with Anabolic/Non-Androgenic Key Compound ^{*}

WORLD'S FIRST! Boosts AND DRIVES Test Directly Into Muscle Cells! ^{***}

168 Capsules
DIETARY SUPPLEMENT

JACK UP TESTOSTERONE LEVELS TO OVER 10,000 PG/ML!

In a two-week study on a key complex found in CryoTest™, researchers showed that the average level of serum total testosterone increased to maximum physiological levels!

Of all the hormones known to man, testosterone is one of the most powerful musclebuilders. To exploit this extremely potent hormone, Team MuscleTech™ researchers have formulated CryoTest™. This breakthrough complex will boost testosterone to maximum physiological levels while fighting testosterone's conversion to unwanted dihydrotestosterone (DHT). Maximum physiological levels represent the highest levels of testosterone within the normal range for men. Anything higher would be supraphysiological. But this is only the beginning! To make CryoTest even more powerful, Team MuscleTech researchers mega-dosed it with a unique ingredient to help amplify the uptake of the musclebuilding hormone, testosterone.

This ingredient was shown to increase pre-exercise androgen receptors after only 21 days and is clinically engineered to drive anabolically active testosterone directly into muscle cells! CryoTest has an even more dominating advantage over any other testosterone-boosting product on the market because it boosts testosterone and drives it directly into muscle cells! And what's more, it's formulated with another key ingredient shown to jack up training-induced GH levels! Get CryoTest today and feel the power of testosterone take over.

Small changes can make a measurable difference. This statement can easily apply to deadlifting. This month's article lays out some tips that may seem subtle, but can make a positive difference in your maximum deadlift. By combining several of these suggestions, results can be further compounded. Most of these tips are common sense plus a little Physics 101, and they are easy to try.

The resistance the bar encounters as it moves up the legs from the floor to lockout is the first obstacle to address. One way to reduce friction is to use talcum powder on the front of your shins, knees, thighs and the bottom of your lifting suit legs. This will help the bar climb up the lower body a bit easier. Take the container of powder and splash a moderate amount on these areas. Then turn the container upside down (with the opening shut, of course) and spread it around with the container's bottom. Be careful not to get any on your hands. If you get any talc or baby powder on your hands, you will have trouble gripping the bar. In that case, wipe it off and chalk your hands up before you lift. For safety and courtesy reasons, apply and spread the powder while in the on-deck area and not on the platform. Excess powder on the platform could cause a lifter or spotter to slip and fall. If you notice any excess powder on the platform before you or a buddy lift, ask the spotters to clean the area prior to your attempt.

Competitive swimmers unknowingly provided deadlifters a very useful tip. Some swimmers shave their heads in order to decrease resistance while in water and hopefully decrease their lap time. Powerlifters don't need to shave their heads, but shaving the front of your thighs can have a similar effect on the resistance the bar faces going up your thighs. Shaving the front of your thighs from the knees to just above where the bar stops at lockout can help reduce friction on the bar as it is dragged up your thighs. This can be done a day or two before the meet. Little things like reducing friction on your legs can make a critical difference.

To help maintain your grip on the bar, we need to do the opposite of the above paragraph and increase friction or resistance. To accomplish this, rub chalk or magnesium carbonate on your hands. Many meets supply chalk near the platform, but over the course of the meet, it either gets borrowed, broken into tiny pieces, or used up. Other meets do not supply any chalk at all. For these reasons, bring your own stash of chalk in a Tupperware-type container for ready access and storage. I would suggest keeping your stash hidden or you'll end up providing chalk for your whole lifting flight and perhaps run out when you need it most. Over the course of the meet, the competition bar may develop a build-up of chalk on the knurling from all the previous lifters' attempts. If you notice this, request the loaders to scrape the chalk off with a wire brush before you lift.

Footwear can be a difference maker too. The ideal deadlift footwear should be low to the ground to reduce

STARTIN' OUT

DEADLIFT TIPS

as told to by Doug Daniels

the distance the bar must travel. Non-skid soles are a plus as they help provide a stable base during the set-up and the lift itself. For conventional deadlifters, I recommend house slipper-type shoes or even actual house slippers. They provide the features I just outlined and also meet rule requirements for footwear. Wrestling shoes are an alternative, but they cost a bit more. You can pick these up at a sporting goods store. Sumo lifters may want to try a cross-trainer shoe for more foot and ankle support. The key to remember is to get shoes with a low, flat heel. A higher heel will angle you forward and decrease your leverage position, requiring you to pull the bar back as well as up. This wastes strength and. Even a degree or two will add more pounds to your deadlift. On a max attempt, every ounce that

Easy To Make Changes can lead to pounds on your deadlift

can be eliminated makes a difference.

I really can't understand why some lifters wear knee wraps while deadlifting. Wraps are absolutely essential for the squat, but for the deadlift, they can be counter-productive. Deadlifting with wraps could cause your knees to lock out prematurely, reducing the contribution from your legs to the deadlift. If sore knees make it necessary for you to wear knee wraps while deadlifting, I suggest consulting a sports medicine doctor to address that problem. I strongly urge you reconsider using knee wraps for the deadlift.

Deadlift form and execution can really make a difference. The more efficiently you can move the weight, the more you can potentially lift; it's that simple. Set-up is first. Many lifters tend to position their bodies too far from the bar. This causes the bar to be pulled in as well as up to lockout as leverage is decreased while the chance of injury is increased. Just like wearing a higher heel shoe, having to pull the bar back or into your body adds more effort to the lift. A key to competitive lifting is to decrease the distance the bar must travel to lockout. If the bar must be pulled in to your body as well as up, the distance the bar must travel is increased. Physics and common sense dictate you can lift more weight over a shorter distance than a longer one. Set up no farther away than 2-3 inches from the bar. I favored touching the bar with my shins at setup. Flexibility can help you achieve a more efficient pulling and setup position, so don't underestimate its importance. You may suffer some scratches and abrasions on your shins, but no one ever said powerlifting was glamorous.

Your grip width is also important. The narrower the grip, the less distance the bar must travel. A narrower grip also allows you to assume a more upright position, closer to lockout, and also adds more leg power. If you deadlift conventional style, grip the bar at shoulder width just outside the start of the knurling. Sumo deadlifters can grip narrower, straddling the knurling and the smooth part of the bar. There may be a limited number of lifters who gain leverage by using a wider grip, but give a narrower grip a try.

You can still blow everything by making an all too common error at lockout. In the desire to demonstrate a complete lockout to the judges, some lifters lean back so far that they cause their knees to bend. This sometimes results in a red light from an alert judge. A fully upright position with your shoulders slightly back will satisfy the judges.

Any combination of these tips can give your deadlift an instant boost without any increase in your strength or changing your training routine one bit. These suggestions are based on common sense and simple physics. Reduce or increase friction where applicable and decrease the distance the bar must travel by using proper footwear and lifting technique. Subtle adjustments to your overall deadlift approach can make a measurable difference in your meet results.

Test Subjects Gain 105 lbs. on Their Bench

The iron doesn't care if you're tired, hungry or not in the mood to lift – 800 pounds will always be 800 *crushing* pounds. To eliminate any size- and strength-limiting barriers that prevent you from lifting personal bests, you need Six Star® Muscle Professional Strength Whey Protein. The scientifically engineered anabolic whey protein formula rapidly accelerates amino acid delivery and uptake for explosive power output. With 50 grams of ultra-potent protein per maximum serving and a 6,676 milligram anabolically loaded dose of 21 key musclebuilding accelerators hitting your war-torn muscle fibers like a freight train, you'll take hold of that bar and lock out every time.

How effective is the Six Star Muscle Professional Strength Whey Protein formula? Proof is in the science. In a 10-week human study, individuals using a key ingredient in Six Star Muscle Whey Protein increased their max bench press by an incredible average of 105 pounds. With a monster increase like that on the bench, just imagine the increases you could be making on your other lifts. Six Star® Muscle Professional Strength Whey Protein is exactly what you and every other powerlifter needs to maximize their power potential. Get yours today at The Vitamin Shoppe®, SuperCenters and other fine retailers to **conquer any weight that stands in your way.**

There are so many great athletes who have poor genetics but have produced mind-boggling success that you have to conclude that success is not contingent on strictly natural ability. —Jim Ochowicz

DR. JUDD

GREATNESS ... WHAT IT REALLY TAKES - PART III as told by Judson Biasiotto Ph.D.

If you will recall last month, I mentioned that in the Seventies I was a researcher with the Kansas City Royals Baseball Academy. The Academy was truly one of a kind with no predecessor and no impersonator. It was an institution of the future that was functioning in the present ... an Orwellian adventure into sports science that was easily five decades ahead of any sports complex the world had ever known. There was no better place to be in the Seventies if you were into sports.

The Academy was the brainchild of Ewing Kauffman, the owner of the Kansas City Royals baseball team. Kauffman believed that athletes who had raw physical talent could be turned into major league prospects by scientific means. Consequently, athletes were procured for the Academy not on the basis of their baseball experience or talent, but rather on the basis of their physical and psychological prowess. In fact, many of the athletes who were drafted by the Academy had never played a day of baseball in their lives. The Academy, unlike other professional baseball organizations, went after the world's biggest, strongest, and fastest athletes regardless of what sport they belonged to. In short, they were looking for the best bodies in the world, not the best baseball players.

Once they had the best bodies, they attempted to turn them into the best baseball players in the world. No expense was spared by Kauffman to make his dream a reality.

A fifteen million dollar complex was constructed in Sarasota, Florida. The complex consisted of five major league baseball fields, an Olympic size swimming pool,

tennis courts, handball courts, two lakes, living quarters for 125 athletes that were fit for a king, a large cafeteria, ten classrooms, a huge clubhouse, and 6 scientific sports laboratories that were equaled by none in the Western World. The laboratories had every piece of scientific equipment imaginable related to sports. It was a researcher's paradise.

As you might expect, the Academy had some of the most renowned sports scientists in the world ... the greatest minds in sports research.

One of the major investigative avenues was to ascertain which variables in performance separated good athletes from great athletes. They literally spent tens of thousands of dollars along these research lines. One variable that they clearly identified in elite athletes was their biomechanical efficiency. They all possess excellent biomechanics in the skills they perform. Once that was ascertained, they went on and literally spent millions of dollars finding ways to improve their players' biomechanics. That may sound a little ostentatious, but that is how important the Academy felt proper biomechanics were to the success of their players.

To be quite candid, I can personally attest to the effectiveness of having good biomechanics. You see I used all of the techniques that the Academy had to improve my lifts in powerlifting. Let me tell what I did and how my performance was affected. The only reason I am going to use my personal experience to explain this to you is because it is more germane to powerlifting, and more importantly, it makes me sound good. So, please bear with me because this is going to be one of those "once upon a time" stories.

As a powerlifter I did not possess any extraordinary physical gifts ... just about every lifter I competed against had more muscle mass and density than I had ... including the women. Believe me I looked nothing like a power athlete, let alone a world-class power athlete. I had very little muscle and even less definition. At best I had a body of an eleven-year-old stamp collector. In fact, my legs were so skinny that I looked like a pair of pliers in shorts. During the first two years of my powerlifting career, I lost every competition that I entered. In some meets I was as far as two hundred pounds behind going into the deadlift. Heck, some lifters could probably have beaten me without even deadlifting. There was a joke going around that the AAU was going to ban me from competition because I was impersonating a powerlifter ... I think it was a joke. All of that changed within less than a year after the scientists at the Academy corrected my biomechanics.

The first thing they did was a biomechanical analysis of my lifts. Under-

Dr. Judd had all his lifts biomechanically analyzed

used very light weight, approximately sixty percent of my maximum. Every one of the lifts that I made during these initial training sessions was videotaped from numerous angles. After each lift, the tapes were played back so that I could analyze my mistakes against a computerized generated image of myself. I spent plenty of time analyzing those films. It helped make me more aware of even minute errors in my form.

Eventually, John Ott, a time-lapse photographer from Disney World, filmed my lifts. Ott set up a series of cameras to photograph my lifts from several angles. Once he filmed me making the lifts with perfect form, the Academy got Faye Reid, a cartoonist, to replicate each frame of the film. After she completed the drawings for each lift, she went back to each picture, and with the help of a team of biomechanics experts, she drew in the actual muscle groups that I used during each segment of the lift. The drawings were done so ingeniously that if you flipped through them, you could see how each muscle group was recruited for the lift. For example, looking at the bench press, you could see exactly in which segment of the lift the latissimus dorsi came into play, when the deltoids were activated, and when each one of the triceps' heads was being used.

In all, Reid made close to 1,500 drawings. After they were completed, they were made into a loop film so that I could view them continuously. By viewing the film, I was able to become aware of the muscles I was using during each segment of my lifts. When I got stuck at a certain part of the lift, I knew exactly which muscles to recruit and/or concentrate on to make the lift. The film also helped me to perfect my form.

For example, it taught me the exact moment during my squat when I should kick my hips in and throw my shoulders back. In short, by using the films as a training aid, I learned to synchronize my mind with my body. During my lifting career, I must have reviewed those films at least ten thousand times.

What were the results? Well, I don't want to brag, but - of course - you know I will. I went from being one of the worst powerlifters in the world to one of the best. If I had not gotten seriously injured, I think I could have been the best. Of course, it is easy to say that since there is no way to prove it ... that is honestly how I feel though. (It might be noted that I am drinking heavily while I am writing this.) There were a lot of athletes who had greater physical prowess than I had - athletes who should have beaten me easily but never could. Like I said, at best I had the body of an eleven-year-old stamp collector. There is no way I should have been able to beat some of the guys that I did, but I beat them and many of them I beat soundly. The secret to my power is that I had flawless biomechanics. If you analyze my squat, bench press or deadlift form, you will find that it is impeccable. I had an extremely efficient, smooth, compact stroke in every one of those lifts.

That is the same thing the Academy found ... the more efficient they made their players' biomechanics the better they performed. Interestingly, few powerlifters even consider perfecting their biomechanics ... a mistake of significant magnitude. As noted, good biomechanics can be the difference between being good and being great.

stand that form and/or efficient biomechanics is an individual matter...it is specific for each individual. Since I was rather tall for a bantamweight, they were hoping to minimize the disadvantage of my height by increasing the efficiency of my movements in each lift. In order to determine the proper form for my anatomical structure, they took electromyographic readings while I experimented with different hand spacing in the bench and different foot spacing in the squat and deadlift. They also tested me on various force platforms. I don't know exactly how they did it, but in less than a month, they put together a detailed biomechanical analysis of each one of my lifts.

What they found was extremely informative. From a biomechanical standpoint, I was doing just about everything wrong! For example, my foot spacing in squat was about six inches too narrow for me to get maximum thrust from my legs and hips. Also, my hip positioning during descent put me in such a poor anatomical position that I literally had to descend a good two inches further than was necessary to break parallel. Even my feet had to be re-positioned so that I could drive upward with maximum power. In short, I literally had to re-learn how to squat, bench press and deadlift.

After they determined the proper biomechanics for my anatomical structure, for a month and a half my training consisted mainly of practicing my new form. During this time, I

Johnnie Jackson
World Record 760 lb. Pull

PULL BIG WITH GAKIC HARDCORE

WHEN WORLD-CLASS POWERLIFTER JOHNNIE JACKSON WAS LOOKING TO PACK ON POUNDS TO HIS PULL

in preparation for the USPF National Powerlifting Championships, he needed a pre-workout supplement that would provide more than just a boost of energy.

For Johnnie, every attempt is a potential new world record so he can't risk having an off workout. That's why Johnnie only trusts GAKIC® Hardcore to jack up his strength before he hits the gym.

GAKIC Hardcore is the ultimate pre-workout supplement for the competitive powerlifter. It's specifically designed to dramatically and instantly jack up your strength! As a result of the raw power of the key

complex in the GAKIC Hardcore formula, university test subjects experienced, on average, a 10.5 percent instant surge in strength with their very first dose. One extraordinary test subject even saw his strength increase by a freaky 24.3 percent! And if this wasn't already enough, in the same study, muscle growth stimulus skyrocketed by up to 28 percent!

Johnnie Jackson and competitive powerlifters everywhere are choosing GAKIC Hardcore to fuel their training. Why? Because it WORKS!

Turn those red lights into white lights today with GAKIC Hardcore!

✓ **JACK UP YOUR STRENGTH BY UP TO 24.3% - IMMEDIATELY!**

✓ **ADD POWER TO YOUR BENCH, DEADLIFT AND SQUAT WITH JUST ONE DOSE!**

Read the label before use. In a clinical study, a key complex in GAKIC® Hardcore increased the total muscle work performed during intense sets of resistance training by an average of 10.5 percent and increased fatigue resistance by up to 28 percent. © 2008. UPA Pro-Am Power Weekend

The UPA Pro-Am Power Weekend was held at the beautiful Grand River Center in Dubuque, Iowa, July 12 & 13. We had lifters from all over the nation and as far away as the Ukraine. This meet was a two day meet with an amateur bench meet on Saturday morning, Pro Bench Bash for Cash Saturday night and Pro Full Power on Sunday. The pro shows placing were by Schwartz formula. The amateur bench meet started off the events for the Power Weekend. In the 114 lb. class Teresa "Little T" Putschio hit a nice solid 209 lift on her 2nd and 3rd. Jason "Tad-ow" Carson at 198 bwt. went 2 for 3 in the morning show hitting a best of 540. Then Jason came back and did the night show the Bench Bash for Cash and went 3 for 3 hitting a best of 573 topping

Best Lifter Ltweight - Vladimir Venglovski with Kenny Patterson and Bill Carpenter

Best Lifter - Matt Kroczaleski

Best Hvy BPer - Ryan Kennelly

his morning show best of 540. That was incredible. Great job Jason. Todd Frank at 41 years old lifted a PR in the 242 class with 600 lbs. Todd has hit a PR of 600 in the 242 and 275 class. Topping out the morning show was best lifter John Berding with a huge lift of 672 lb. in the 220 lb. class. John is getting stronger with every meet he does. Congratulations to all of the Amateur morning show lifters. The UPA Bench Bash for Cash: Every year I hold the BB4\$ we get the best benchers in the world to lift in it. This year was even better. The crowd was large and really in to the meet this year. I really feel this will be one of the premier meets for the best bench only guys. The stage, loud music, and big crowd has the feeling of a mini Arnold Classic bench meet. The lifters were going for a total of \$2000 in cash awards. Starting out with the lightweight division (220.5 and under) Janet Farone of MetalMilitia all the way from New York at a bodyweight of 132 lb. was the only woman stepping up and going against the men. Janet lifted a strong 330 lb. and missed 363 on her 2nd and 3rd attempt. Rudy Hillyard from Pennsylvania lifted a PR of 446 lb. As some of you know and some of you who don't know, might say Rudy is handicapped. I say Rudy is a true warrior and let's nothing stop him from doing what he loves to do. Rudy it a great guy and comes to all my meets no matter what it takes. I appreciate that kind of support and thank you Rudy. Tim Hensley from Detroit Barbell took 3rd in the LW division with a lift of 633 lb. Matthew Minuth from Zenzen Powerlifting Team took 2nd place in the LW division. Matthew lifted 755 lb. and just missed 771 at a bodyweight of 219 lb. Ex Bodybuilder turned freak bencher. This guy is only 27 and I have a feeling he will be breaking some world records soon. Very strong and built to bench. Jake Prazak from North Iowa Powerlifting Team won \$1000 in cash for 1st Place in the LW division with a lift of 804 at a bodyweight of 220 lb. Jake took 2 shots at Rob Luyando's 220 lb. 832 lb. record with 834 lb. and was very close. Jake keeps getting stronger each meet and I see the 220 bench only record being broken very soon. In the Heavyweight division Mark Bell of Super Training Team from California at a bodyweight of 308 lifted a PR

of 810. Mark has the slowest press I have ever seen. The guy just muscles the weight up. Great job Mark. I was real happy to see Chris Smith get a big lift in. Chris has had some bad luck at my meets and this meet he stepped up and pressed a big lift of 749 at 242 body weight. My good friend Sebastian Burns of MetalMilitia from New York took 3rd place in the HW. Sebastian missed his opener, but then came back on his 2nd attempt of 749 and finishing with a strong 788 for his 3rd.

Matt Hobmeier from W. Heights, Iowa was on fire this day. Matt went 3 for 3 749, 771, and 804. Matt drives 6 hours to train with us once a month. Matt had some tough frustrating workouts for a long time and pulled it together for the big show. Great job Matt, all your hard work paid off. Now on to the two best benchers in the world. I always like to see Rob lift. The crowd really gets in to

BORN TO LIFT

"Stronger than a tank and more muscular than a ... who the hell cares, he's absolutely huge!" As you lug your blood-filled legs to the squat rack, the gym goes silent except for the whispers coming from a couple of newbie lifters. You're determined, confident and ready to unleash hell. Powered by LEUKIC® Hardcore, it's time to step up to the rack and experience the difference a 100 percent anabolic compound can make on your lifts.

The stats speak for themselves: One of the key ingredients in LEUKIC Hardcore is able to force 350 percent more anabolic signal activation and another key ingredient has been shown to increase Growth Hormone (GH) levels by 106 percent! It's these proven results that have turned on your anabolic machinery to promote the muscular size and strength gains you need to blow past another PB.

This isn't a game. It's your job, your life and your duty. Get on LEUKIC Hardcore and start showing the world what type of man you really are.

- World's First 100% Anabolic Compound
- Force 350% More Anabolic Signal Activation
- Increase Growth Hormone (GH) Levels by 106%
- Zero Androgenic Side Effects

Johnnie Jackson
World's Strongest Bodybuilder

© 2008. All trademarks are owned by their respective trademark owners and are used with permission. LEUKIC® Hardcore is patented. Test subjects who trained and took a key component in LEUKIC Hardcore forced 350% more anabolic signal activation at the muscle fiber level than when taking a placebo. A key molecular structure within LEUKIC Hardcore has been scientifically shown to increase training-induced growth hormone levels by 106% after just one pre-workout serving. For more information, check out LEUKICHardcore.com

We, at Muscle Works Gym, have read your columns on hardcore gyms in Powerlifting U.S.A on a regular basis. (That comment - although obvious flattery - will get you published; I've been hoping for years that someone reads these! RB) We have often wondered why we are not mentioned, probably because none of us had written you. (Also, we've featured so many other FL gyms that some other states were jealous. Evidently, there are zero hardcore gyms in Rhode Island and Idaho. RB) This seemed to be the perfect time to tell you about our gym.

Muscle Works Gym just had four lifters compete at the AWPC World Meet; Mike Allocco, Margaret Kirkland, and Vinny Lysobey - all three got best lifter. (That's a lot of Best Lifters.) All the people mentioned train at Muscle

Hard Core Gym #79 MUSCLE WORKS GYM as told to Powerlifting USA by Rick Brewer

Works. The part that makes it a little more interesting is that Muscle Works is a 4,600 sq. ft. gym in Bradenton, FL. Muscle Works definitely fits the term Hardcore Gym. We have no ceiling; a roof - yes, but a ceiling - no. We have three-quarter inch rubber floors through out the entire facility, with bright yellow concrete block walls, located in a storage unit behind a strip mall. We also have a plethora of world record certificates on the wall and a lot of trophies on the bag rack as you enter. The gym has a personality of its own - once

you come in you feel like part of the group, everyone helps everyone. You can contact me (Van Searcy) at the gym (941)752-9828 or by mail 447 Cortez Rd W. Bradenton FL. 34207 - and I'll help you with the info.

Van; first of all, thanks for pretending to read the Hardcore Gym articles. It will delay my suicide plans and also make my mom so proud. (Call her Nana.) I'll have to tell her about this important reader discovery, because even she just pretends to read the articles - but she'll be so proud when I tell her.

(Some readers know Nana from power lifting meets.) Who started the gym, and why is it so long and skinny? Tell me more! Rick

We have a gym with it's own personality. (So does First Lady Health Spa, but they're not Hard-Core. RB) Muscle Works was started in 1989 as a Power House gym. It was owned by a bodybuilding couple, Dave and Lynn Kaufman. As the last sentence intimates they started it as bodybuilding gym. They sold it for some unknown reason, probably the long hours, to Reggie Blankenship. He moved it to another location we managed (my father managed the first location). Reggie was a powerlifter so the gym had a mixture of lifters, but then Reggie went through a divorce. I had been lifting there for quite awhile. When his divorce played out,

I wound up with the gym. When we leased the gym space to the anchor tenant of that plaza, we had to move the gym. Fortunately, the majority holder of that plaza was buying another plaza a half mile away - but the only space available in that plaza was the storage area in the back. I know it was long story but you asked. (My bad)

The lifters train together most of the time but most have screwy schedules. Friday is dead lift day, Saturday is squat day (don't even try to get close to the Monolift on Sat), and Tuesday is bench day. There are about 3 different groups of lifters but they intermingle so much, that there is no telling who is in which group. (I was at that party, but someone had to drive me home. RB)

The gym is the prototype for the modern Hardcore Gym; older but very effective equipment, rubber floors throughout, ugly yellow concrete walls, chalk everywhere, a self designed dead-lift platform (because they broke my foundation), anchor chains in five gallon buckets, trophies galore when you walk in the door, world record certificates with Powerlifting USA rankings on the walls, some pictures of some of the record lifts, and a stereo that drives two 2.5 X 3.5 inch speakers (Wow! Usually you have to ride in an old AMC Gremlin to get this speaker size and quality! RB) playing mostly 80's hard rock but you never know what you are going to get. The air conditioners work most of the time when the chalk doesn't clog the filters, but the filters have to be changed every two weeks. The dimensions are different too 30 X 145 ft.

There are two stories that are lifting related that I can recall. Vinny Lysobey was training for the AWPC World Meet; he was benching, somehow something went wrong, and the bar wound up on his neck (not the funny part). The next day; Vinny's angry wife came in looking for the spotters, you should have seen all the big lifters running from a 120 lb. wife. (Girls are the mean ones; I would've ran and hidden, too. RB)

We have had a few good powerlifting meets at the gym, most of them were Scott Taylor's meets. The weigh-ins were generally the night before. I was at the counter one time, when a guy with one arm walked in and asked where the scales were. I had to ask; he said he was going to bench and squat. The next day he did, and he benched 550. (I can't remember this one-armed lifter's name, but I've seen this guy bench at meets before! Very impressive! If you know his name, please email it to me. RB)

The difference this gym has is in the people we have, from every walk of life. We have ditch diggers, we have computer scientists, doctors, judges you name it. Mike Allocco got married a couple of months ago; he laid the invitation list on the front counter for anyone to get an invite. We only have 170 members max. The wedding was 45 miles away and had about 170 people, but fully 55 guests were lifters from the gym. I was impressed by the solidarity.

The gym is different because of the people. Different, YES, but also 3 of the best lifters in the world train in a 4,600 sq ft gym in Bradenton FL. that has been open for 20 years. That is unique. (And, it's a very long

and skinny gym. RB)

The person who took the impromptu photos is Margaret Kirkland's daughter. I don't think I told you that Margaret was on the cover of Powerlifting USA a couple of months ago.

Thanks to Van for the info, and thanks to MK's daughter for the photos from the gym! Little known fact is that about 11 or 12 years ago; HOUSE OF PAIN used a rented long-skinny storage space - until we moved to our present location in Fate. Muscle-Works Gym is a very cool gym, even if it is yet another gym from Florida. Do the rest of you states have any gym-pride? Heck, there are way more lifters in CA & TX than in FL; there should

be more HardCore Gyms in both states. I thought FL was best known for 'Girls Gone Wild' spring-break videos, alligators that eat poodles, and retirees getting struck by lightning on golf courses. But the FL crew keeps cranking out stronger people from all of these Hardcore Gyms. What about the Midwest? Hey Salt-Lake, hey Detroit, hey St. Louis - can I get a shout? I know some beasts that live in Hawaii; where do you train? What about all of you Yankees in the North-east; do any of you train in a Hardcore Gym?!? Holla back or I'll say you are DEAD.

Shipping Additional

Having trained with weights for nearly 20 years, without so much as a week off, except for the occasional BigFoot safari, but chasing an imaginary monkey around the woods for a week is pretty physically draining as well, traditional stuff has grown beyond boring. This has led my training partners and myself to experiment with our resources and develop alternate forms of conditioning. Some of these have been very successfully implemented, such as our outdoor drills covered in previous articles, and some not so successfully, such as our countless hours of frantic meth-enhanced nude line-dancing which, while rigorous, failed to produce notable conditioning results, or favorable criminal records.

Omitting Olympic Weightlifting, which is a highly skilled sport, the main popular forms of weight or resistance conditioning are Bodybuilding, Powerlifting, and the Strongman contests. My training is a pretty even distribution of all three of these disciplines. Following such a program, I have not been able to master one particular sport, lift or event. This however, is the widest, most diverse base of conditioning that I have ever had, and I could easily switch focus on any one of the sports for a cycle and be somewhat competitive, except perhaps for bodybuilding, due mostly to my Jim-Beam-and-Frosted-Flakes binges and the manic, uncontrollable sobbing that accompanies them.

I have always used the Westside barbell program as a general template, as it allows a broad base that one can modify as they become stagnant or bored. Also, those Eastside fools got nothin, yo. Incorporating bodybuilding is pretty easy and can be done a couple of different ways. You can replace the speed work with bodybuilding work; you can replace max effort work with bodybuilding work; or, as I prefer, reduce the volume or intensity on the main speed and max work and then do-

An Unconventional Beast as told to PLUSA by Aaron DiPrima

ing bodybuilding afterwards. Instead of doing four or five exercises, the traditional template allows for increasing it to 8 or more, and this can also be broken down over two days, especially on the max effort days. So a typical two day split may look something like this:

Day 1

- FloorPress up to 90%
- Dumbbell incline 4x15-20
- Machine Press 3x20
- Tricep Dumbbell ext. 4x10
- Tricep cable work 10 minutes
- Side lateral work 3x15-20
- Rear delts 2x20
- Abs

Day 2

- Pullups 4x10
- Lat Pulls 5x15-20
- Cable rows 100 reps total
- Peering into the vast emptiness of your soul 20 reps

-Shrugs 10x10

-Bicep work 15 sets total

Incorporating the bodybuilding work into the template is generally pretty easy. The Strongman stuff can be implemented just as easily by switching the core movements with Strongman events. For instance, Max Effort Bench can be a Log Press for a heavy single or best set, Speed Deadlifts can be exchanged for Tire Flips, and general assistance exercises can be switched to lower impact outside drills and Strongman events. Followed rigorously, this program can also make the voices stop whispering those evil thoughts in your mind.

With just a couple rearrangements you have a system that is working all three of the disciplines.

Day 1

- Log Press 3x5
- Dumbbell incline 4x15-20

-Machine Press 3x20

-Tricep Dumbbell ext. 4x10

-Tricep cable work 10 minutes

-Vigorously spank Dain 50 reps

-Side lateral work 3x15-20

-Rear delts 2x20

-Abs

Day 2

-Truck Pull 1 set for time

-Pullups 3x bodyweight to failure

-Cable rows 100 reps total

-Farmers walk with Kettlebells 4 trips to grip failure

-Bicep work 15 sets total

Again this is just one example, and keep in mind that this will make you the proverbial jack of all trades, but you will not be in a position to master any particular one.

Please call with any questions or Bigfoot sightings:

Five time World's Strongest Man Mariusz Pudzianowski combines powerlifting, bodybuilding, and strongman achievements with great effectiveness.

Branch Warren
Team MuscleTech™ Athlete

PACK ON THE PLATES

Pain, desire and determination – all are necessary in order to survive the ruthless training sessions of a hardcore powerlifter! Only the strong survive this life and only the few willing to go past their limits reap the rewards of being a true powerhouse.

To take your grueling training sessions to the max and load more plates onto the bar, you've gotta make sure you're maximizing your creatine absorption. Why? Because more creatine in your muscles means bigger, heavier lifts! This is why Team MuscleTech™ brings you CREAKIC® Hardcore – the world's most powerful creatine pill! CREAKIC Hardcore clears the pathway for maximum creatine saturation by fighting off Reactive Oxygen Species (ROS), which can block creatine transport. In one study, subjects consuming the key ingredient in CREAKIC Hardcore increased their muscle fiber protein content by an astounding 58 percent! Just imagine the damage you could do in the gym!

Get on CREAKIC® Hardcore and experience the true meaning of powerhouse!

- ✓ America's #1 Musclebuilding Creatine Pill!
- ✓ Increase Muscle Fiber Protein Content by 58%!
- ✓ Designed to Crush Reactive Oxygen Species!

In a 12-week clinical study, test subjects consuming a key ingredient in CREAKIC Hardcore increased muscle fiber protein content by 58 percent. © 2008. All trademarks are owned by their respective trademark owners and are used with permission. For more information, check out CREAKICHardcore.com™.

The Bang Behind BökU™
A Roundtable discussion with
Leading Experts on this new
Super Food

Part 1

You know I am big on promoting the health of our lifting community. Due to the fact that so many lifters do suffer from numerous different health conditions this has become one of my main priorities. In reality it is the main concern even above helping you attain that bigger total because without your health you will never reach the top of your game. The reason why so many lifters have these health problems is that the majority do nothing to improve their health or prevent these diseases from happening in the first place. With most lifters it is only when they have a health condition kick them in the backside, then and only then do they sit up and take notice. Time and time again I have even seen lifters know that they have a cholesterol problem or elevated triglycerides only to see their nutritional journal on how they inhaled a dozen doughnuts, 50 chicken wings and washed it down with a six pack of Bud. I am not here to rain on your parade but the reality is you have to take your health into consideration. I know most of you may think I push the whole health thing too much. Once you taste a major health problem like a heart attack or have been diagnosed with Type II Diabetes, all of a sudden you will see that maybe I didn't push it enough.

The reason why I am excited is because of a new product that I want to introduce to you. I go above and beyond in my quest to let you guys in on the best natural supplements and foods. I am into super foods and greens products. In a time when most foods are loaded with impurities, additives, refined ingredients, and pesticides, strength athletes need super concentrated nutrition that processed foods aren't providing. I look to super foods to help fill the gap that is missing from so many lifters' nutritional daily intake. I also recommend these foods to lifters for many other reasons. First off since so many lifter's diets are lacking in the proper nutrient profile to support their health and intense training sessions, it is imperative that you provide your body with the nutrients, both macro and micro to help keep you healthy and strong. The product that I wanted to let you know about is BökU™. That may sound like an odd name but this product is anything but odd. In fact it is one amazing greens super food that is at the top of its category. This powerful formula was created by

NUTRITION

Power Nutrition Q & A

by Anthony Ricciuto, B.Phed. C.F.T. S.P.N. S.W.M. F.T.

the innovative minds of Reno Rolle and Dr. BJ Adrezin. When it comes to Greens or Super food products I have been through the gamut of using just about every formula on the market. Of all the ones that I have tried BökU™ really stood out. To let you know more about the different health and performance benefits it has to offer I decided to conduct a roundtable discussion with many leading experts in Holistic Nutrition and Medicine. I also contacted the formulators of BökU™ and medical professionals that are inclined to the natural health sector to help give you the inside scoop on what Boku can offer from a scientific point of view. In this first part of the discussion I wanted to ask some question that I thought you would be interested in knowing and at the same time help give those lifters who are not familiar with these types of super foods what they can offer you for your performance and health. In this first part most of the questions will be answered by Lynn Rolle, the CEO of BökU™ Super Foods. Also answering questions will be Chakra Earthsong, a leading alternative health consultant and Holistic Nutritionist. So here it goes.

Anthony Ricciuto: What inspired you to create BökU™ Super Food and how did you arrive at the formula?
Lynne Rolle: Well our Mission Statement is simple and sincere: "To positively impact the highest number of people possible, with the healing power of natural, organic nutrition."

Böku Super Food™ was born out of necessity. When Reno's son was diagnosed with a focus problem in 1994, we rejected the automatic prescription for Ritalin(r) and began searching for alternatives to mainstream mind-altering pharmaceuticals. The naturopathic physician that we consulted had experienced recent success with a new powder supplement containing super green algae, spirulina, and other potent, live foods. We were skeptical at first, but after seeing the results with our son, it ignited our passion for using food as medicine. We began to realize that society may have become addicted to pharmaceuticals and that nature may actually have better answers to all our ailments.

Anthony Ricciuto - the food guru behind www.NutritionXP3.com

Over the years we sampled and familiarized ourselves with various Superfood products from all over the world.

My husband Reno and I attended a health retreat in Calabasas, California a couple of times each year. This retreat is often referred to as a yoga and hiking "Boot Camp." Each day, we hike an average of 14 miles and do several hours of yoga and various other exercises. All while restricted to 1400 calories of organic vegetarian food, organic decaffeinated teas and pure water. It was during these retreats that we began experimenting with our own Superfood formulations to ascertain the direct benefits we were receiving.

I personally have a thyroid condition and like many women my age, have experienced wildly fluctuating hormone levels and the related challenges. We began early tests by including an incredible substance from high in the mountains of South America called Maca. A nutrient dense Superfood, Maca has been used for thousands of years to balance endocrine function and as a fertility and sexual enhancement food. It's also amazing for pure energy without the spikes and crashes associated with caffeine and other stimulants. We were absolutely blown away by the effects we experienced flooding our blood with pure organic nutrition during these intense experiments. We are both well into our 40s, and we were out-hiking, out-lifting, out-running... out-performing other members that were sometimes more than 20 years younger! My thyroid condition is gone and I've lost

almost all of the 20 extra pounds I had been carrying around since my children were born.

In 2005, Reno co-created an historical best seller on the subject of natural cures. "Natural Cures They Don't Want You to Know About" was number one on the NY Times list for 18 weeks, and has sold in excess of 10 million copies and is widely considered the most successful self published book of all time. This experience vaulted our interest in natural medicine even further and placed Reno in the company of some of the most brilliant medical doctors, homeopaths, herbalists, naturopaths, and organic formulators. Our vast network of alternative health practitioners and researchers proved to be great resources for sourcing ingredients, and ultimately the formula for BökU™ Super-food. We began working with these amazing minds to create the ultimate full spectrum Superfood. After working for several years on countless formulations, Böku™ International was officially launched in July 2007.

AR: Your latest product, BökU™ Superfood, is one of the hottest superfoods on the market today. Can you explain to the readers what a superfood is and what its purpose?

LR: There are certain plant-based foods that are so nutrient-dense that they actually create health in the body! BökU™ SuperFood is such a formula. Many of these incredibly powerful foods have been used for thousands of years. They turbo charge immune function, fight sickness and can help heal the body. BökU™ is a synergistic blend of the most powerful phytonutrients, nutrients derived from our earth's plants. They flood the cells with bio-available, organic nutrition to shift the body into a natural state of balance, producing superior health. Many people are unaware of how few nutrients they are able to absorb from man-made, synthetic supplements. Synthetic supplements are heavily processed and are manufactured in pharmaceutical plants and chemical factories. The body cannot even recognize or assimilate the majority of these formulations. Boku Super Food is pure nutrition directly from nature, made from beautiful, living plants.

AR: BökU™ is one of the most nutritionally dense greens superfoods on the market. Can you tell us what the different ingredients are in BökU™?

LR: It's a very long list! Our proprietary mix contains over 30 different ingredients. Our web-site, www.bokusuperfood.com offers detailed information on every ingredient. It's worth noting that

BökU™ contains no fillers of any kind. Every single ingredient in our formula is there for a specific reason. BökU™ is a broad-spectrum superfood that contains essential vitamins, trace minerals, antioxidants and probiotics. Experts are blown away when they read our label and discover that we've really missed nothing. Here is a label breakdown of what BökU™ contains per serving.

BökU™ SUPERFOOD-Formula by Dr. BJ Adrezin

BOKU SUPER GREEN (3000mg)

Organic Spirulina, Organic Chlorella (Cracked Cell Wall), Organic Full Spectrum Grasses™: Organic Barley Grass (Nectar, and Juice), Organic Oat Grass (Nectar, and Juice), Organic Alfalfa (Nectar, and Juice), Organic Gotu Kola, Organic Nettle, Organic Kelp, Organic Bladderwrack, Organic Nopal Cactus, Organic Dandelion Leaf, Organic Horsetail, Organic Broccoli Juice, Organic Kale Juice, Organic Spinach Juice, Organic Cabbage Juice, Organic Parsley Juice, Organic Klamath Lake Blue-Green Algae

BOKU SUPER CHOCOLATE MACA (2500mg)

Organic Maca Root Juice, Organic Cacao (organic raw chocolate), Organic Sweet Mesquite Pod, Organic Carob

BOKU SUPER BERRIES (2000mg)

Organic Hawthorn Berry, Organic Goji Berry Juice, Organic Acai Berry, Organic Blueberry Juice, Organic Blackberry Juice, Organic Raspberry Juice, Organic Strawberry Juice, Organic Cranberry Juice

BOKU SUPER EXTRAS (1960mg)

Boku Super Sprouts (Organic Flax Sprouts, Organic Chia Sprouts, Organic Broccoli Sprouts, Organic Quinoa Sprouts, Organic Millet Sprouts, Organic Buckwheat Sprouts, Organic Amaranth Sprouts), Organic Date, Organic Carrot Juice, Organic Beet Juice, Boku Super Enzymes (Amylase, Protease (3 different potencies), Bromelain, Cellulase, Lipase, Alpha-galactosidase, Papain), Probiotic (vegan grown), Organic Red Dulse, Himalayan Pink Crystal Salt

AR: Wow that is one amazing formula. It looks like you have put many of the best herbs and super foods all in one place. Since purity of product is a big concern today for those purchasing natural foods and supplements can you tell me about your production facilities?

LR: BökU™ Super Food is hand blended and packaged with care in a state-of-the-art GMP facility in the USA. We were touring the facility recently, and I have to say,

Lynn Rolle - BökU(tm) CEO

it's quite impressive. You can literally eat off the floor in our plant. Given our kosher and organic certifications, we are subject to unannounced inspections and are held to the most stringent standards imaginable; which is exactly how we like it!

AR: What is the dosing program for taking BökU™? How can it be used?

LR: We always recommend starting slow. Begin with 1 tablespoon or scoop per serving blended into your favourite juice or pure water, and gradually increase as desired. It's virtually impossible to overload your system with Boku Super Food. Many of our customers, especially athletes and weightlifters, will mega-dose. The small dose of 3-4 tablespoons offers the equivalent of an incredibly nutrient-dense meal. Just 1 tablespoon, the beginner's dose, floods the cells with vital nutrition and also truly satisfies deep hunger. That's why so many first-time users report easy weight loss with Boku Super Food. By flooding your cells with organic nutrition, cravings disappear and you find yourself snacking less. In addition, energy levels sky rocket from our organic maca and other powerful ingredients. You'll be naturally motivated to work out. For many, the feeling after enjoying a superfood drink is similar to caffeine high. Caffeine and other stimulants boost you up, but only temporarily. BökU™ offers an energy lift without the peaks, crashes and resulting adrenal stress. In fact, BökU™ Super Food delivers an incredibly smooth energy rush while soothing and nourishing your glands, rather than pounding them with stimulants. Energy derived directly from nutrition is the best possible choice for our bodies, and will deliver the best workouts possible.

AR: This is my thoughts exactly when I am designing nutritional

plans for my world class athletes. I always stress that you want to fuel the body so it can perform at an optimal level. Can you overdose on BökU™? Should this be a concern for lifters?

LR: It's important to note that Boku SuperFood is not a supplement. BökU™ is a broad-spectrum superfood. As I mentioned earlier, it's virtually impossible to overdose with BökU™. Mega-dosing is not only safe, but encouraged. Depending on the individual and the level of toxicity, there may be adverse reactions to the cleansing benefits of BökU™. Common sense and trial is the way to go. Again, start out slowly, see how your body responds and build from there. My husband takes 6-8 tablespoons mixed in a shaker of juice before he hits the gym. Sometimes, he'll do this twice a day or more! He is 47 years old and in the best shape of his life. We have many professional bike riders, motorcycle racers, football players, fighters and other athletes that mega-dose constantly and swear by the results.

AR: Does BökU™ need to be taken on an empty stomach or can it be mixed with food?

LR: For best results take BökU™ on an empty stomach. This way there's less chance of impeding absorption and you will really feel the rush of nutrients. Of course, this assumes a relatively clean colon that is not super clogged and highly toxic. The main goal is to get BökU™ in the system.

AR: I couldn't agree with you more
LR: There are way too many people that rely on stimulants just to get them through their day and this should not be the case. The problem is that their nutrition choices are simply the worst foods imaginable that is not fuelling them to even get through their work day let alone intense training. This can only lead to more health problems down the road.

AR: Can you tell the readers what type of energy they will feel when they take BökU™?

LR: The energy from BökU™ comes on gradually and stays with you, without the jolts and crashes you get from caffeine or other artificial stimulants. Once you've experienced this pure, powerful energy, you'll never go back to caffeine. And again, it's important to remember that while you're enjoying this amazing, clean energy, you're soothing and nourishing your glands instead of pounding them into submission. Eventually, over-taxed adrenals burn out. It's believed that this can lead to Chronic Fatigue Syndrome, where there's just nothing left for

will be made thru our Newsletter & web site as released.

AR: How will BökU™ help powerlifters with their energy levels? Many powerlifters consume large amounts of caffeine because they lack energy. Can you give us some reasons why Boku will help energize lifters without the stimulating effect?

LR: BökU™ delivers amazing energy benefits. The difference is that the energy comes from pure nutrition, the way the body prefers it, not from a drug. Caffeine is a stimulant that basically hammers the adrenal glands, triggering the release of adrenaline. Remember adren-aline is the "fight or flight" hormone that is released during high-stress events. Going to the gym for a work-out or getting through your day at work should not be a high-stress event. We don't need a jolt of adrenaline energy. We need the smooth, lasting energy that can only come from pure nutrition. Beating up our adrenals with caffeine is very dangerous and can lead to big problems down the road. A little bit of caffeine is fine - probably no harm in a cup of coffee, once a day. But most of these supplements and energy drinks contain way too much of it. After a while we find ourselves needing more and more. We all know someone that visits Starbucks several times a day or drinks a full pot of coffee just to get through the day. They probably all started with one cup.

AR: I couldn't agree with you more

LR: There are way too many people that rely on stimulants just to get them through their day and this should not be the case. The problem is that their nutrition choices are simply the worst foods imaginable that is not fuelling them to even get through their work day let alone intense training. This can only lead to more health problems down the road.

AR: Can you tell the readers what type of energy they will feel when they take BökU™?

LR: The energy from BökU™ comes on gradually and stays with you, without the jolts and crashes you get from caffeine or other artificial stimulants. Once you've experienced this pure, powerful energy, you'll never go back to caffeine. And again, it's important to remember that while you're enjoying this amazing, clean energy, you're soothing and nourishing your glands instead of pounding them into submission. Eventually, over-taxed adrenals burn out. It's believed that this can lead to Chronic Fatigue Syndrome, where there's just nothing left for

KRE-ALKALYN BUFFERED CREATINE**

Unmatched Vascularity, Awesome Pumps
And Dramatically Enhanced Muscle And
Strength Gains! Bodybuilder's 1st Blood
Plasma Expander! Creatine PHD program-
Why? Kre-Alkalyin is the only stable cre-
atine. Kre-Alkalyin is the only creatine in the
world with a pH above 12 because its mole-
cules are synthesized with "buffering"
agents using a patented manufacturing pro-
cess. As a result, it passes intact to the
bloodstream and reaches the muscle cells
at full strength. What does all this science
mean to the person taking it? You receive
all the benefits of what creatine has to offer
with "zero" side effects. Immediate result's--
it works the first time with NO LOADING
PHASE!!! It is 10 times stronger than any
other creatine. Most importantly Kre-Alkalyin
neutralizes lactic acid so you can perform
at even higher levels. It comes in Orange
Flavor 2.8lb. Container with 65 Servings for
\$ 46.95.

Longevity in Powerlifting ... Krista Ford is still going strong after 24 years. Krista's been involved with track & field, softball, golf, flag football, bobsled and powerlifting (both sports where she has made the US Team). 3 keys to her longevity have been the ability to take constructive criticism, listening to her body (she's come back from many injuries including rotator cuff tears, ACL tears, and elbow surgery), and financial backing (Inzer Advance Design has been a major supporter of her power equipment for over 15 years). With multiple National and World titles behind her, and a host of records, she looks forward to many years of breaking her own personal records. She has been called the female Ed Coan because of her awesome technique in all three disciplines, which came from years of practice. She graciously wishes to acknowledge some great lifters who have come before her: the late Dawn Reshel, Tamara Grimwood, Anthony Clark, and Dave Pasanella, as well as Mariah Liggett, Doris Simmons, Mary Jeffrey, Nancy Dangerfield, Laura Dodd, Janice Roge, Margaret Kirkland, Amy Weisberger, Lynn Boshoven, Ed Coan, Ken Lain, Gary Heisey, Jesse Jackson, Scott Warman, Curtis Leslie, John Ware, Brian Meek, Anthony Conyers, Russ Barlow, and Ernie Frantz.

QUEST-NUTRITION.com

Hey Mauro: I was just wondering how many grams of protein the body can absorb during one meal if I'm taking my protein from eggs lets say, which is 100 for biological value. Somebody told me that the body can't absorb more than 27g at a time so theres no point in taking more than that every 2-3 hours. Is this true? Thanks, **Mat**

Hi Mat: The amount of protein that you can absorb, and utilize for protein and energy metabolism, varies greatly depending on circumstances such as genetics, type of protein, diet, body weight, activity/sport level, etc. Also since your body will adjust to increasing protein intakes, the amount that you can absorb at any one time can be proportional to the amount that you take in over the longer term. For example someone who only takes in a small amount of protein will have trouble efficiently absorbing much larger amounts until his body adjusts to the protein load.

It's also important to consider what happens to the protein once it's absorbed. Although it's too complex a subject to go into here, I think it helps if you consider various proteins to be similar to carbs and as such some get absorbed quickly (high glycemic sugars and carbs) while others are absorbed slowly (starches and low

ASK THE DOCTOR

Questions answered by Mauro Di Pasquale MD

glycemic carbs). Whey protein is an example of the former while casein is an example of the latter. The absorption rate as well as the amount absorbed can dramatically affect protein metabolism. For example, taking in large amounts of say whey protein results in more of the protein being used for energy and transformed to glucose (gluconeogenesis).

There's a lot more to all of this so if you're interested in the details you may want to get a copy of my new book, Amino Acids and Proteins for the Athlete, the Anabolic Edge - it's available at www.mdplusstore.com.

Best regards, **Mauro**

Mauro: I have always had great results with your phase shift diets, especially the Anabolic Solution for Powerlifting, in the past. Since returning to the anabolic diet, recently I have begun to cut up and have experienced more definition, but have to not be able to get rid of my gut. I have a bloated feeling, especially when carbing. I have, however, lost body fat and confirmed this

with the use of body fat calipers. Some advice from others has been to colon cleanse. They believe this could get rid my gut. I have seen many advertisements on TV and on the Internet about colon cleansing. Do you have any thoughts or opinions you could share with me? Thanks for your time. **Dan**

Hi Dan: You can try colon cleansing but I doubt it will give you any real results. Getting rid of the gut usually involves decreasing body fat both superficially, between the abdominal muscles and the skin, and more importantly the fat between the backbone and the skeletal muscle, i.e. the visceral adipose tissue (VAT). Increased VAT has been shown to be related to insulin insensitivity, metabolic syndrome, diabetes, cardiovascular disease, etc. in men so it's important to get rid of as much of it as you can. Colon cleansing will decrease the amount of fecal matter in your bowels so it seems like it's helping, especially if you've been constipated and thus backed up, but it's re-

ally doing very little in the long term to decrease your gut and nothing to decrease VAT.

Cutting back more on the calories, and decreasing the carb up by say limiting it to one day or even half a day, will help. You may also want to use supplements such as LipoFlush and GHboost (the Body Composition Combo at www.mdplusstore.com), which are extremely effective for improving body composition, and decreasing both superficial body fat and VAT. To find out how look at the PDF files available on line on each of the supplements. Let me know how things work out.

Best regards, **Mauro**

Dr Mauro: I liked your article on lipoic acid so went from there to read more on it. I came across one article though (by someone called David Barr), who said that through the way it affects ampk levels, it shuts off muscle growth. What's your opinion on this? Would it have this affect? Thank you for your time, **Simon Pitt** (England, UK)

Hi Simon: I'm not familiar with David Barr's writings so looked up his article at http://www.t-nation.com/free-online_article/sports_body_training_performance_bodybuilding_supplements/ala_anabolic_fat_loss&cr-. In that article he states that "how ALA works, it increases levels of the protein called AMPK". In fact ALA does different things in different tissues. In pancreatic cells it does increase AMPK but does the opposite in some other cells and tissues - for example it can suppress AMPK - see Kim MS, Park JY, Namkoong C et al (2004) Anti-obesity effects of alpha-lipoic acid mediated by suppression of hypothalamic AMP-activated protein kinase. Nat Med 10:727-733.

The story on ALA, as with almost everything else when you get down to exacting the mechanisms and interactions, is far from complete and we have much to learn. At present, however, small to moderate doses, at least in my view, are beneficial on many fronts, including body composition. Larger doses may be counter productive as ALA can have prooxidant effects under the right conditions and can impair metabolism, decrease certain processes, and increase tissue dysfunction and even apoptosis.

Best regards, **Mauro**

The 27th USAPL Women's National Powerlifting Championships will be held Saturday/Sunday, February 14 & 15, 2009 at the Hyatt Hotel, in downtown Miami, Florida. An application for the event can be found here: <http://www.usaplNationals.com/2009-wome...index.html>. I would like to begin by stating the volunteers of USA Powerlifting - Florida are very excited about hosting this year's championship.

I have placed this year's championship in a location with the highest possible degree of activities for you and your family members. The hotel and venue are located just 10 minutes away from both South Beach and Bayside Marketplace - two of the most popular attractions Miami has to offer. Information pertaining to these two "Hot" tourist spots can be found at the following web-links: <http://www.southbeach-usa.com> and <http://www.baysidemarketplace.com>

The equipment for the championship will be of international calibre, and will include six [6] ER/Combo squat/bench press racks from Denmark, and six [6] sets of calibrated Ivanko bars/weights. This equipment will be used both on the competition platform and in the warm-up area. A computerized scoring system shall be used to direct and calculate the individual and team scoring for the championship. The Florida Gulf Coast University Powerlifting Team will be handle the spotting/loading and are the fastest and best loaders in the game.

Key and important, the championship will be drug-tested in accordance with USAPL/IPF standards. IPF Referees will be in attendance for lifters to set both World and American records. In addition, if you require powerlifting gear, commercial sellers will be available with the most up-to-date equipment to accommodate your specific needs.

As a kind and gentle reminder, please be aware of the deadlines AND Group Code, to make your hotel reservations. It is VERY important that you make your reservations early, as this is high season for tourism in Miami! The competition will be held on President's Day Weekend, which are the same dates as the Miami International Boat Show [largest in the world], so if you miss the deadline, locating a hotel room, in and outside of Miami, for a reasonable price, will be quite difficult.

Information pertaining to the boat show can be found here: <http://www.miamiboatshow.com/>

If you have any questions regarding this championship, or if I can be of further assistance, I can be reached via e-mail: rhh@verizon.net or by: 954.790.2249 - I am here to answer all of your questions.

To close, on behalf of USA Powerlifting, I would like to take this opportunity to wish you much success with your training for this competition and look forward to seeing you at the championship in Miami!

Sincere regards, Robert Keller, Contest Director
2009 USAPL Women's National Powerlifting Championships

THE RAGE

The bench shirt that's storming the globe! The Rage is the superior bench shirt of the round-sleeve type shirts, and provided at an unbeatable price for this genre of bench press shirt! Bench more with The Rage than in any other round-sleeve, guaranteed!

- The **Round-Sleeve™** design is very user-friendly because it accommodates many benching styles.

- **Reinforced thicker neck.** No cheap, flimsy "low profile neck" here. The thicker neck on The Rage creates more support for explosiveness off the chest.

- **Stretchy-Back™** makes The Rage more effective and easier to get into. It allows the lifter to custom-fit on the spot by allowing the neck to be lowered down the body and the sleeves to be lowered down the arms. The fitting adjustments allowed by the Stretchy-Back™ provide the effect of an Open-Back but with a back that is completely enclosed. The Stretchy-Back fabric also breathes easier, creating comfort.

- **SOLID SEAM™** technology. The construction and stitching on The Rage is superior. The Rage seams lay flat which eliminates the digging into your skin that regular commercial seams do. Regular commercial seams are intended for fast-sewing efficiency to save on labor cost, and for loose-fitting, mass-produced T-shirts, not for Bench Shirts. Inzer Advance Designs, the originator of the bench shirt, has always been the forerunner of bench shirt technology and construction. The most important thing the Solid Seam™ does is eliminate the erratic bar wavering that another's shirts cause. Instead of the quarter-inch of open play between sleeve and chest-plate the pinched commercial seams create, the Solid Seam™ locks all parts of The Rage together making it so solid it might as well be welded together. The differences are sometimes subtle but when all these factors are added together it makes a big difference. These reasons alone would make The Rage the best Round-Sleeve™ bench shirt in the world, but there's much more The Rage offers for big benching.

RAGE X

A step above the shirt that's all The Rage in powerlifting. The RageX is the sensational shirt that's helping powerlifters sweep the earth with massive bench presses. The RageX is a step above all round-sleeve bench shirts in clear Quality and Effectiveness. The RageX is the most amazing poly bench shirt in the history of the game.

- **Extra Reinforced** front shoulder seams add support and security for this radical design. Thicker, Extra Reinforced neck.

- The combination of several new contours built into the pattern complement the already super RageX system.

- **SOLID SEAM™** technology keeps the sleeves where they are supposed to be, working in unison with the body, not jittering or faulting with the bar. You will increase your bench press and keep it safe to boot. Proven in numerous world records.

- **RAGE X IS FOR EXPERIENCED BENCH PRESSERS ONLY PLEASE!** RageX goes into new territory where unbelievable results from a poly shirt happen. The RageX will continuously amaze you at how much you can bench press. Bench pressers report regularly how much fun the bench press has become for them because of this amazing bench press shirt. The increased weight you will bench press will take practice to become accustomed to. Strength gains will result from handling the increased weight. Confidence will rise from one training session to the next.

- The RageX is the bench shirt for those who want an immediate step up to stratospheres of bench press power because it is a **MORE AGGRESSIVE** design than any other company knows how to make. This is not only about sleeve angle and elementary things such as that. It is about numerous details creating a cumulative effect that is undeniably the best. The most Quality and Results are yours in the RageX.

- **RageX in DOUBLE LAYER.** Go Double Layer and increase the longevity and comfort of the RageX bench shirt. Or choose Single Layer for single-layer competition restrictions.

- **Guaranteed.** Absolutely guaranteed you will bench press more than in any other round-sleeve bench shirt.

The World Leader in Powerlifting Apparel

PHENOM

The *Phenom* is an extreme top-end bench shirt that will provide you with phenomenal bench press performance, features and power. Guaranteed beyond any other. Made from the legendary *HardCore* material. The on technology of this kind, the *Phenom* will provide you with incredible power at the chest through the mid and top range of motion and it will keep this power lift after lift, competition after competition.

- The design provides flexibility for your arm angle preference and bar placement, whether that's elbows in, out or in between; low, high, or mid chest range. Will enhance your bench press form, not limit your form.

- Spreads the stress over a wider area of the chest.

- Made from the exclusive *HardCore* material which will provide you with the most incredible rebound power available in the powerlifting world. *HardCore* material is also up to 40% heavier than the closest poly fabric on the market being used for powerlifting gear.

- Since the *Phenom* is made from the *HardCore* material, you will also experience many more performance benefits. The *Phenom* will keep its memory and will not stretch out. You will be able to use the *Phenom* for countless workouts and competitions in the future. It's a true investment in powerlifting gear.

- The material of the *Phenom* has the perfect balance of non-stretch and rebound combination which will provide you with incredible power and momentum from start to lock out.

RADICAL DENIM

Extreme performance technology makes *Radical Denim* the choice of most all the world record breakers who wear a denim shirt. The heaviest construction available for the maximum in benching prowess. *Radical Denim* will provide you with the top end denim experience.

- The *Radical Denim* is the most extreme bench pressing experience for top level benching.

- Made from heavy quality denim that will withstand the pressure from the heaviest poundages.

- Proven in countless world record breaking bench press performances.

- Choice of Partial Open Back, Closed Back, Complete Open Back. With or without Velcro.

ULTIMATE DENIM

- The most sturdy bench shirt of all. Used by some of the world's best benchers with great success!

- The *Ultimate Denim* has virtually no stretch to it and works best for lifters with a beefier upper body.

Mary Ellen Jerumbo-Warman – the first woman to squat more than four times her bodyweight

USA Powerlifting's Angie Overdeer and Bettina Altizer.

Sandra Flores-Alamo in Hawaii

The late, great Ashley Boyce

The 1970s could be labeled the Golden Age of Powerlifting. The number of registered lifters grew through the 1970s and peaked right around 1980. A true International World Championship was being held. By the end of the 70s powerlifting had two networks (CBS and NBC) covering the sport. Also through the 70s, there was just one true National Championship.

None of this was without a struggle. The issue of excessive wrapping was addressed at the 1969 Nationals, but it did not go away. Lifters who used wrapping just became more creative. I lifted in a meet in New Jersey in November of 1970 and a Senior Nationals winner was getting changed at the same time I was. I watched in amazement as he put on one layer of clothing after another. The bed sheets were gone, but other methods were used.

During the 1970s drug usage became more widespread. There were no rules against it, and most thought it was the only way to be competitive.

The AAU would control Powerlifting for another ten years. This was good and bad. The AAU was a large organization, and could handle administrative issues well. The country was divided into regions and each had an office. I was in the Middle Atlantic Region. What I really liked was how the meets were set up. There was a Junior Mid-Atlantic Championship in late winter, and four to six weeks later was the Senior Mid-Atlantic Championships. Each state in the region then held their State Championship in early Summer. The Junior Nationals were in August and the Senior Nationals in September. Open Meets were held in the Fall and early Winter.

Some of the names from the 1960s, Peanuts West, Pat Casey, Gene Devers and Ronnie Ray faded

The History of Powerlifting The 1970s, Part 1 as told by Bob Gaynor

from the National scene. They were replaced by Rhodes, Crawford, Pacifico, Anello and quite a few new Supers.

A training routine that was very popular at the time was the 5-4-3-2-1-5 program. Let's show how this would work with the squat. The first set would be 400x5, then 420x4, 440x3, 460x2, 480x1, 425x5. If you complete all lifts you add five pounds to each set the following week.

Bill Clark continued to promote powerlifting and his concentration at that time was prison lifting. One of the things Bill did was put on a ten lift meet for prisoners.

Contests continued to grow in size, and the thirty and forty lifter meet became seventy and eighty lifters. They also became much longer as most meets were single day affairs.

For 1970 the Juniors were to be held in Denver and the Seniors in New Orleans.

In 1970, Don Blue, a prison lifter, set squat, deadlift and total records in a meet in Lansing, Kansas in the 148 lb. class. A big lift of the year was Jim Williams at the Junior Mid-Atlantic Championships in February of that year benching 628 to exceed Pat Casey's 617.

Last time we talked about scales having to be certified the day of the meet. Most thought the scales should be next to the platform to immediately weigh record attempts. Early in 1970 Jerry Jones lost an American Deadlift Record because the scales were not certified. The record, if it had been accepted, would have been short lived, as Vince Anello did 701-1/2 a few weeks later.

At Jim Taylor's Eastern Open Power Meet, (later to be called the Chattanooga Open), Russ Fletcher deadlifted 804 and totaled 2070 for new American Records. A new name, Tim McLain of Kansas City, claimed the 181 lb. deadlift record with a lift of 687. Larry Pacifico upped the 198 lb. total record to 1750. George Frenn squatted 720 and deadlifted 775 at the Azusa Police Invitational to set 242 lb. records.

The Collegiate Nationals were held at Michigan State University. The 198 lb. class was especially talent heavy with Vince Anello, Pat O'Brien, Steve Miller, Bill Ennis and Joe Spack.

At the Juniors in Denver they had fifty four lifters over two days. Jim Witt, National Powerlifting Chairman, was on hand to insure the rules were followed. What was allowed was a rubber waistband under the lifting belt. The only American record set at this meet was Anello's 725 lb. deadlift. This was one of the first meets to have a deadlift figure on the trophies. Almost all previous meets had used Olympic lifting figures.

The Seniors were held in New Orleans on August 22 and 23. There were forty seven lifters and many records, and a little controversy. Dave Moyer cleaned up at 123. He was not at his best, but he won by 100 lbs. Mike Cross at 132 was down by 70 lbs. going into the deadlift, but pulled an American record at 556 lbs. to win. Jack Welch and Doc Rhodes took the 148s and 165s. Alabama's Bob McKee, with a big 655 lb. deadlift, won at 181. Bombing out at 181 was the late George Crawford. George had a 100 lb. lead at subtotal. He

opened at 545 and missed all three attempts. This would not be the last time the deadlift haunted George. Finishing third at 181 was Joe Spack. Part of powerlifting is the personalities. Everyone who knew Joe had numerous stories to tell about him. He called himself "Jelly Bean", and talked to someone who lived in his gym bag. I was told Joe entered a physique contest. His posing routine consisted of a left arm single bicep pose which he pointed to with his right hand. At 198 Larry Pacifico beat Jack Barnes and Joe Weinstein. The star of the meet was Jon Cole. I think this was his finest meet. There was strict judging and decent control of excessive wraps. Cole out-totaled the Supers to win easily at 242. Cundy again prevailed at Super. He needed two attempts at 785 in the Deadlift, but captured another Senior National title.

The controversy surrounded Jim Williams. Jim benched 615, and back then the bench was still the first lift. He opened with 700 in the squat, went to 730, had trouble with the racks and missed. For his third attempt, Jim asked for the racks to be adjusted, but for some reason the head judge would not allow it. Jim refused to take his third attempt. He was talked into deadlifting, but only made a halfhearted attempt.

In 1970, Muscular Development, Muscle Builder and Iron Man were the best sources of printed powerlifting info. Today, in addition to Powerlifting USA, we have the internet, but back then it was the telephone. My inside source of info was Jim Williams. I can't imagine what his phone bill was. He spent hours each day on the phone talking to lifters all over the country.

Late in 1970 we began to hear talk of a possible World Championships in 1971. Records set that Fall were Tom Overholzer's 1610 (wraps ??) at 181, and Boston's Joe Leonardis' 390 bench at 165. At the El Paso Power Meet, Cole totaled 2090. A new name appeared in the Western PA Open. Don Reinhoudt.

An international meet in Los Angeles between the Southern California Association and a British team took place. George Frenn squatted 815. The British won the meet six classes to three.

Some of the meet directors during this time were Les Cramer, Tom Snelgrove, Charles Gschwind, Clay Patterson and Curtis Walker.

In 1971 the Juniors were held in West Patterson, New Jersey, directed by Frank Bates and the Seniors in Dallas by Jim Witt.

There were many meets and records before the Nationals were held in 1971. The Scranton YMCA always held a big meet in February. 1971 was no exception, with the

Jon Cole and George Frenn: superstars of powerlifting during the early 1970s, trading world records at 242 back and forth until they actually exceeded the marks of the superheavies. Seen above at the Mexico City Olympics, both were great track and field athletes as well.

Eastern United States Open. This meet always drew big time lifters. George Crawford, Dave Moyer, Jack Kammerer, Pat O'Brien, Joe Weinstein, Tom Scott and JoJo White and Larry Pacifico, just to name a few. Crawford set a new 165 lb. squat record with a 604-1/2, and about three weeks later he upped this to 615. Big Jim Williams benched 635 and totaled 2025 for two new American records. Jim had a third attempt at 670. John Kuc lifted in this meet as a 242 lber. Soon after this Big Jim would talk him into going Super. Tom Scott beat John, who suffered only one other defeat in his career. John needed a heavy deadlift to win, and we all tried to talk him into it. John always had his own thought process, and he took less than needed for a win on his third attempt and made it easily. He then asked for a fourth attempt and did ten more pounds than he would have needed for the win. Very strange!

Also in February, Lyle Schwartz in MD magazine proposed a new formula for powerlifting. The sport used the Hoffman formula at this time and Lyle thought it favored the heavier lifter, and his was a much fairer formula. Formulas have always been troubling. How

do you compare someone weighing 132 lbs. with someone weighing 242 lbs.? I am not sure there is a fair method. I attended a national meet in 1973 where a second place finisher based on formula was the best lifter. He totaled five pounds less than the class winner, but weighed four pounds less. Eventually the award became Champion of Champions to prevent this.

Early in 1971 a Classification System for powerlifters was established based on total. At that time it was Class III, Class II, Class I, and Master. Everyone was wearing their classification patches.

With a Worlds to be held that year information on foreign lifters was only available, and very little, through MD. No one knew who would be competing. England adopted the name powerlifting that year, prior to that they called the lifts the Strength Sets. England squatted first, then benched, followed by the Deadlift. They would eventually persuade us to do the same.

In May 1971, Terry Todd and Paul Anderson began combining for a monthly article in MD on size and strength. Most found this to be informative and entertaining.

Steroids were openly discussed. Some information was pro, some

con, and some was hard to believe stories of steroids driving people crazy. The top drugs of the day were orals, Winstrol, produced by Winthrop, and the really big one was Dianabol produced by CIBA.

The first 2100 lb. total was done by George Frenn, at the Pomona Police Association Power meet. Along with the total, George squatted 853, a record that was very controversial and stood for ten years. The stories were rampant. George weighed more than 242, the squat was three inches high, and he had more wraps than a mummy. I was not there, but supposedly Don Haley was one of the judges and Don has an impeccable reputation.

About a month later at the Tolleson Open, Jon Cole went 525-800-815-2140 to break the total and deadlift records. Around the same time Vince Anello took the 198 lb. deadlift record from 725 to 774-1/2. What a jump!

Allan Clark set a new deadlift and total record to top Dave Moyer's long standing mark. Pacifico benched 515 and totaled 1815 at 198.

There was an interesting occurrence at the Central California meet. Tom Overholzer was disqualified for excessive wraps. Bob Packer was involved in this. I believe this was the first time this had happened.

The Juniors were August 7th and 8th in West Patterson, New Jersey. The Weightmasters from NE Pennsylvania had hoped to take the team titles, but we had four bombouts and two sub-par performances. So much for that. At 123 Gerald Ringi topped John Redding by 10 lbs. Iain Burgess took the 132s and Ron Ingram won at 148. These first three classes had twenty-seven lifters. Compare that to the number we get today in these weight classes. George Crawford won easily at 165, with Jersey Joe Pyra finishing second.

As I stated before, the personalities make the sport, and Joe was a unique critter. Pyra competed from the early 60s through the late 90s. He was also an official, meet director, and administrator. For those who knew Joe, he always seemed to find a way to become involved in controversy. He also had many original ideas. I competed in one of his meets in the early 1970s where at a weigh-in he took a straight edge and magic marker and drew a line on the outer part of each lifter's thigh from knee to hip joint, a great reference point for the judges. Joe always helped me at my meets. The second ADFPA North Americans I promoted drew 219 lifters. I think it was the largest meet ever held, to that date. Every time I went to

the mailbox I got sick. I called Joe and he brought a crew from New Jersey and took care of one of the platforms for me.

Back at the Juniors, George Clark beat Joe Spack at 181, and a fellow by the name of Louie Simmons was third. Bill Ennis won the 198 lb. class with very balanced lifts.

Tony Grigor, whom I was training with at the time, was probably the most unusual lifter I ever saw. Tony had a PhD in chemistry, and at one time worked for NASA. We both had a goal to deadlift 700 lbs. at 198 at that meet. Three weeks before I did 640x3, which I thought would give me a chance. In the same workout Tony did 650x9. The first rep was slow and the next eight identical. Tony, who squatted a class best 575 at that meet, could do 525x8. His rep ability was amazing. He opened in the deadlift with 660, which would give him third and missed it three times. How could someone do 650x9 and miss 660? I have told his story numerous times, and many do not believe it, but it is true.

At 242 Tom Scott was an easy winner. Tom looked like a powerlifter, a stocky barrel chested, big-legged lifter. Tom set two National Records at this meet. The winner at Super, after some big name bomb-outs, was 400 lb. Tim Hasse. What I remember about Tim at this meet was he was always outside smoking.

There was some controversy at this meet, and it involved the judges. I think this was the first time at a National Meet where a side judge raised his hand as soon as he saw an infraction, and the lifters thought this prejudiced the other judges. To my way of thinking it is a safety factor for the lifter. As a head judge I have struggled as to when to tell the spotters to take the weight, because neither side judge gave me an indication that the lift should be taken. This year at a BP/DL meet in Boca Raton, FL, a lifter was struggling with a very heavy bench. I saw the head judge look at both side judges, but neither gave any indication. Luckily, the spotters saved the lifter.

The Seniors were held in Denver. There were fifty one lifters. Allan Clark won the 123s by almost 200 lbs. Milt McKinney took the 132s and Bill Spangler edged Jack Welch for the victory at 148. George Crawford seemed to have cured his deadlift problems and took the 165s. Jack Barnes won by 100 lbs. at 181. At 198 it was Pacifico. Kanter, Weinstein, Jones and Anello. It was the most competitive class of the meet. Larry totaled 1805 for the victory. Anello finished fifth, but pulled 750.

Tom Scott won the 242s totaling 35 lbs. more than he did at the Juniors. Hugh Cassidy of Oxon

At the '71 World Championships: (l-r) Don Cundy, John Kuc, Jim Williams, Hugh Cassidy, Carlton Snitkin

Hill, Maryland, dominated the Supers. Jon Cole missed all his squats and was out.

Terry Swift of Stillwater, Oklahoma held the first three platform meet in 1971. Jim Messer held a novice meet on December 2nd in Norristown, PA, that drew 124 lifters.

The first Worlds was held on the first weekend in November at the William Penn Auditorium. This was not a gym or a YMCA, but actually a stage setting. The turnout of lifters was light. I think the title and the prospect of strict judging kept many home. There were mainly American lifters, but England took two titles.

Precious McKenzie, then of England, was the 123 lb. champion. This was a rare defeat for Dave Moyer. The 132 lb. class was the largest of the competition with nine lifters. Milt McKinney of Toledo, Ohio, defeated Enrique Hernandez of California by 10 lbs. Michael Shaw of England defeated USA's Jack Welch and Jack Kemmerer to take the 148 lb. World Championship.

The funniest moment of this contest was Tom Snelgrove running out of the warm-up area with Shaw's knee wraps. Tom was yelling "they are 30 feet long". England, at that time, had no limit on the length of knee wraps. I am not sure if they were 30 feet, but they were at least 18 feet. I can still picture Tom with the wraps draped all over his body.

At 165 there were only three entries, George Crawford, Joe Pyra and England's Ron Collins. Collins missed all his benches and was out. Crawford squatted 625 and took an easy victory. At 181, Arizona's Jack Barnes had very little competition and took the first world title in that class.

At 198 it was Larry Pacifico and John Kanter. Larry out-benched John by 55 lbs. (the bench was still the first lift), but John out squatted Larry by the same amount. In a dead heat at subtotal, Larry was the lighter man, and he matched John's deadlifts for the first of his many world titles. The 242 lb. class was disappointing with only two lifters. Carlton Snitkin and bulked up 198 lber. Joe Weinstein. Carlton took the victory by 65 lbs.

The Supers really put on a show. Big Jim Williams, Hugh Cassidy, John Kuc at 272 lbs., JoJo White and multi time National Champ Don Cundy. There was no rounds system at this time. The bar weight continued to progress upward, and you lifted when it reached your weight. You might have to follow yourself or you could have twenty attempts between yours. Cassidy benched 570, which was more than everyone except Williams. Jim began at 630, easy! Jim then followed himself

Don and Cindy Reinhoudt: were a familiar sight at major lifting events.

with 660 for another success. In the squat Cassidy and Williams both made 800, so as it usually did, the title would come down to the deadlift. Williams opened with 700 and made no more. I had trained with Williams and Kuc for this meet, and I knew that Jim never deadlifted, and it would cost him again.

Don Cundy opened with 800 in an attempt to get back in the hunt, but had three misses. Cassidy needed 790, more than he had ever done, but it slowly came up, and he tied Williams and was the lighter man. Hugh himself said he had not expected to make the lift. It seemed like the meet was over. But wait! Kuc was still going. John had opened with 750 and it looked like 135. He did not wear a belt. John went to 820 for a new American Record. This was probably a bad choice. John asked me what he needed to win, and 875 was the number. The bar was loaded, for the heaviest weight ever attempted. The 875 left the ground and stalled just above his knees, but it proved to John that it could be done. John competed on and off for another 15 years and never again was defeated.

In the Fall of 1971 Muscular Development gave itself the title of the Official Powerlifting Journal. Bill Starr, who had left York, started his own Weightlifting Journal publication. The real breakthrough was Dan Dewell's Powerlifting News. Dan had numerous eager correspondents from over the country sending

him sometimes weekly updates. It was a great source of information and my first subscription cost \$3 for a year.

With the two new publications, along with the existing ones, the coverage of powerlifting improved. I spent the winters of 1971/1972 training with Jim Williams and John Kuc at the old YMCA in downtown Scranton. Each session amazed me as one of the two exceeded at least one of the American Records. At one Saturday session Jim and John both exceeded the squat record. Jim benched 675, which was 15 lbs. over his record, and John exceeded the American deadlift record. It was truly amazing. John was getting bigger each week and he added weight to his squat every week. Both were unique individuals in their own way. John was attending college in Wilkes-Barre. The school had limited on-site parking, but had a huge lot about 1/2 mile from the school. On squat days, if John could not get a parking place near the school, he would not go to class, because he thought the 1/2 mile walk would affect his squats.

With the YMCA being in downtown Scranton, it was also difficult to park. There was a 'no parking' area outside the YMCA, but Jim told me to park there. I don't know how many tickets I got, but I gave each one to Jim, and never heard anything about them.

There was and still is in powerlifting controversy over how good a lift might have been. In the case

of these two, they used nothing except legal wraps and their lifts were very clean. Both went well below parallel in the squat.

The 1972 Juniors were to be held in Wisconsin, the Seniors in Denver, and the Worlds again in York. York was pushing to change the sequence of the lifts, having the squat instead of the bench as the first lift. They said this would increase totals with the longer rest between the squat and deadlift. The real reason, or at least a big part of it, was Great Britain was making this a big issue. Myself, and many of those that trained with us, would rather deadlift right after squatting. The warm-ups required less time and effort.

The question of who was the World's Strongest Man and the battle of lifts and words between the superheavyweights dominated much of 1972. MD articles fueled the strongest man challenge. Everyone wanted to beat Paul Anderson. In speaking with John Grimek and John Terpak, who both saw Paul Anderson on a regular basis, they indicated he did not have much interest. He did accept the challenge, in this manner. He would travel to York and do all three powerlifts and three Olympic lifts in a one hour time frame. Anyone could do the same where and when they wanted to, provided it was done within one hour and had National Judges. There were no takers.

Other lifters were breaking records in 1972, Jack Kammerer deadlifted 601 at the Salem County Open, Vince Anello deadlifted 780 at the Ohio States, George Crawford totaled 1555 at the Key to Sea Championships, and soon after Doc Rhodes did 1575 at 165 at the N. Louisiana Championships.

Big Don Reinhoudt squatted 835 and Marty Joyce at the New England States deadlifted 698 at 181. Steve Crandell of Phoenix benched 437 at 165 and Pat Neve benched 468 at 181, and Al Hart did 359 at 132. Hart set a bench record every time he lifted. Pacifico did a 530 bench press and 1900 total.

At the Japan Power Championship at 123 lbs, a lifter by the name of Hideaki Inaba lifted. Who has competed at a world level longer than Inaba?

Charles Gschwind was the new powerlifting chairman. Bob Crist, Joe Zarella, Dick Young, Bill Stevens, Al Treaster, Terry Swift and Ralph Sesso were promoting meets. Some Meet Directors, especially in the South and in California, were using the 222 or 225 lb. weight class.

The National Collegiates in the 70s and 80s was a big meet. The 1972 version had 85 lifters, including Carlton Snitkin, Jake

Boyer, Enrique Hernandez, Bill Ennis and Ralph Sesso.

John Kuc traveled out to Cincinnati to an Open Meet promoted by Charles Gschwind and did 585-865-840-2290 for three American Records.

The Juniors in Cambridge, WI had 57 lifters. John Redding at 123, Gary Wardell at 132, Richard Luckman at 148, and Tony Carpino at 165 were winners. At 181 Paul Woods beat Marty Joyce on bodyweight. Paul won numerous titles in that manner. Tom Farchione at 198, Mike MacDonald at 242, and Lyle Schwartz at Super were the other winners. John Kuc and I were going to go, but a devastating flood hit our area in June. Communication was limited for weeks and some areas were not livable for months. This changed our plans.

Ron Chrysler promoted the Seniors in Denver. The turnout was light. At that time there was no requirement to lift in the Worlds, so many lifters skipped the Seniors. John Redding and Richard Luckman added the seniors title to the Juniors they had won weeks before. Franklin Riley won at 132 and Joe Spack got this National win at 165. Doc Rhodes bombed, as did American record holder Jess Woods. Jack Barnes again had an easy victory at 181. Jerry Jones at 198, Ernie Doe at 242 and Jon Cole with 570-865-820-2255 took the Supers.

There seemed to be more focus on the 1972 Worlds than any other Worlds, with the possible exception of the first year that drug testing was done. The focus in 1972 was the Supers. Whether it was MD, Ironman or Powerlifting News, the Supers was what was talked about, Jim Williams, Jon Cole, Don Reinhoudt, JoJo White, Don Cundy and John Kuc.

Williams posted a letter in MD and Powerlifting News inviting all the Supers. He also personally called then to insure attendance. Supposedly all except Cundy were going to show. Williams talked to Cole three weeks before and he said he was coming.

Then one week before the Worlds Cole lifted in AZ and set squat, deadlift and total records. He then announced he would not go to the Worlds, and hoped Williams and Kuc would be subject to the same judging he had in Arizona. It's hard to imagine a local meet would have stricter judging and weighing of records than a World Meet. Williams was furious and Kuc was disappointed.

Cole was lucky because Kuc would have kicked his ass.

I always admired Jon Cole, but his failure to show at the 1971 and 1972 Worlds bothered me. In 1971 he claimed he tripped the day before he was to leave, but York never had an entry. Then in 1972, lifting in Arizona the week before, I was told by an Arizona lifter that he was fearful his deadlifts would not be passed. I guess

we will never know.

This year's Worlds was two days. The 123s had Dave Moyer, John Redding, Mike Cross, but Precious McKenzie won by over 100 lbs. At 132 there were eight lifters, four were Americans. Franklin Riley had an easy victory. At 148 there were ten competitors, including 1971 Champion Michael Shaw and former National Champion Jack Welch. The competition

Vince Anello made deadlift history again and again in several classes.

was close, but Jack Kammerer's big 605 lb. Deadlift gave him the victory.

Ron Collins was the story in the 165 lb. class winning by 130 lbs. George Crawford did not lift and Doc Rhodes continued to have problems in the squat, missing 530 three times. If he had just got in one squat, it might have been a different story. England had won two of the first four weight classes.

In the 181 lb. weight class, Vince Anello came down from 198 and Jack Barnes and Paul Wood went up. Vince posted a nice 1635 total to win. Vince Peterson of Rochester. New York was second.

There was great competition at 198, Jerry Jones, Jack Barnes and Butler, PA's Tony Fratto. Barnes benched 430 and squatted 715 to have a 35 lb. lead at subtotal. Jack could get no more than 600 and had to settle for third. Fratto pulled 670 to take second, and Jerry Jones with an 1805 total was World Champion.

Larry Pacifico moved up to 242 and hoped to be the lightest man to bench press 600 lbs. 225 lb. Mel Hennessey was also looking for a big bench. Met got 565 and Larry at 227 lbs. got 575. In the squat Mel did 710 and Larry did 700 for a 1975 total and another World Championship.

The Super line-up was JoJo White, newcomer Paul Wrenn, Don Reinhoudt, Jim Williams and John Kuc. Cole did not show.

Don benched 590, using his wife Cindy for handoffs. Kuc became the third man to bench press 600 lbs. Now Mr. Williams took over. 630 was easy, 675 looked just as easy. Jim got 700 about halfway up. In the squat JoJo White missed all three attempts. Kuc started with 805 and it looked like 135, Jim made 825 and Don got 830. Kuc did 860 on his second, again easy. His goal had been 900, but moved it to 905 because of Cole. His 905 was described as a perfect squat. Kuc now had a five pound lead and the contest was over. Kuc deadlifted without a belt, did 800 and 845, and got 875 to his knees. This, like most of John's contests, were won on the first deadlift.

Driving home after the meet, John (who was very conservative in planning what he could do) thought 2550 for next year was realistic. Two weeks later he had his blood pressure taken and immediately started to reduce bodyweight.

Shawnee High School Head Powerlifting Coach Tim Seelig, Nick Hannah, Ashlee Anders, Dylan Jamison, Kirsten Lute, David Ricks at the USAPL Ohio State meet. (from left to right)

What they had to start \$0.00; what they needed \$15,000. Why did they need it? To get all the way to from Springfield, Ohio to Oklahoma for the National power lifting meet. The Clark-Shawnee High School power lifting team had worked long, hard hours to get there. They lifted for 15 to 20 hours a week, not to mention the extra hours they spent getting ready to compete. The SHS power lifters had to pay their way to get to Nationals. Fund raisers were held, sponsors were called, and whatever remained the lifters were responsible to pay out of pocket.

When Tim Seelig first began coaching powerlifting at Shawnee 5 years ago, there were about 30 athletes and more girls than guys. Since then, the team has exponentially expanded, and it has evened out in gender. Last year the team had 100 athletes, and 52 of them went to compete at Nationals. So far this year, with just pre-sign ups, the team has 130 athletes, making this Shawnee's biggest sport.

Shawnee is one of the few schools that have power lifting as a varsity sport. The coaches treat the guys and girls with same standards, no matter what. The team has an extremely long season that runs from November to April with practices every weekday and meets on the weekend. Individual lifters pay to participate in meets. During January and February there is a

local meet almost weekly, and in March and April there is a championship meet about every 3 weeks.

The Lady Braves powerlifters have 2 national championship titles and are undefeated. Last season both the men and the ladies won Nationals. Yet with all the great pride the power lifting program has brought, it still has trouble being taken as a "quality" program, struggling to survive. The Ohio High School Association does not recognize power lifting as a sport, in the way that they recognize football, basketball, cheerleading and bowling. These athletes work hard and train as much as any other sport. The power lifters need to get a sanctioned tournament to help keep the sport alive.

Shawnee High School has always backed the program. The team just recently got backing from the Springfield News-Sun, a local paper, and the team and program managers hope to earn some more support as a result.

It would not be that hard for high schools to create a power lifting team. Most schools already spend hefty amounts of money on weight rooms. As Coach Tim Seelig said, "This is a sport for many different types of kids, and not everyone can play basketball or be a wrestler." (by Sarah McLaughlin)

ULTRA PRO REVERSE HYPER
\$2,190 Including Shipping within USA

"New" ULTRA SUPREME REVERSE HYPER
\$2,594.00 includes Shipping This new reverse hyper works the complete back. Use it with table set straight for the same effect you get on all our reverse hypers, allowing for dynamic strength development in the concentric phase, while serving as a rehabilitation mechanism in the eccentric phase by gently stretching and depressurizing the spinal column with spinal fluid and the low back muscles with blood. Use it with table tilt down toward front and feel the stretch and decompression like never before into the complete thoracic area. When you tilt the machine down toward the rear it works like a 45 degree hyper highly stimulating the erectors and the gluts.

WNPF Lifetime USA Lifters. SP=Single Ply. Team Champs Women's Division: Bailey's Barbells, Open Powerlifting: Willy's Powerhouse, Open Bench: Willy's Powerhouse. We had a total of 58 lifters from 9 states. Seven tested and all passed. This meet is starting to come back to being the big summer meet in Georgia for the WNPF. We want to thank the many lifters that came out and gave us a chance to show them what type of meet we can put on. Thanks to my staff, Wade Johnson from Tennessee, Tom Isbell from South Carolina, Greg Campbell from Augusta, Perry Thomas from Delaware, Adrian Locklear from Atlanta, Steve and Cindy Yeargin from Spartanburg, SC, Jamie Cooper and Momi Ford from Atlanta, Tee Meyers from Augusta, Tremaine from Louisiana, Big Brad from Georgia and Jason and Amber from Atlanta. No one bombed out and everyone qualified for the WNPF Worlds in November. There were some outstanding performances today from many lifters and I will highlight some of them, sorry I cannot highlight everyone but we do appreciate everyone's performances. Charlotte Hall in the 114 class totaled 535 lbs raw in the masters division. Jackie Dean totaled 585 lbs in the 123 lb. class and curled 75 lbs. to win the best lifter award in the curl. Rachel Wilcox benched an impressive 140 lbs in the bench press in the 132 class and she is 16 yrs. old. Jeanea Lawson had the highest bench of the day with a 160 lb. lift. Rhonda Sams had the highest squat and deadlift with a 380 and 420 in the 148 class she also took home the best lifter award in the full meet. Brian Albert benched an impressive 380 lbs and missed 410 in the 148 class, he also did 34 reps in the rep contest to win best lifter. Charlie Paige benched 380 raw and could have benched at least 400 lbs. When Charlie benches the bar explodes off his chest to over halfway and then he drives with his triceps, he is a very impressive bench. Brian Fisher lifting in his first WNPF meet benched 420 lbs. in the 181 class to set a new state record. Willy Wilcox from Florida totaled 1320 lbs. in the 181 masters

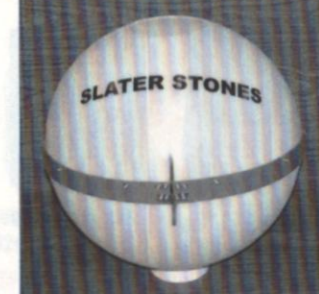

division with a 485 squat and 585 deadlift. Mark Driggers hit 1700 lbs in the 198 class, Mark had a depth problem with his first squat attempt but he came back strong with a 2 for 3 day in the squat, he also hit a 500 bench and a 625 deadlift. He passed on two attempts so there is no telling how much more he would have totaled. All 198'ers better watch out for Mark in November. What can you say about Tee Meyers, just say WOW. 51 years old still deadlifting 750+ and no one commands the crowds attention more than the Skinny Man. Tee is loud at the meets, always running his mouth but this is how he stay's fired up and keeps other lifters fired up. Many people that don't know him think he is just a guy that can lift a lot of weight and always talking. Believe me Tee will hel anyone and everyone at these events, he gets in some lifters faces to fire them up and these guys love it, it's a show and most people love it. Were glad Tee is a part of our organization and he has been since 1992. He hit 735 on his second attempt and missed 765 on his third when his hand got caught on his wrap on the way up. Dave Harper hit a 380 raw bench and 165 curl in the 198 class. Ryan Smith hit a 425 bench and missed 440 in the 198 class and Craig Minor hit a 405 in the same class. Damon Meyers will hit a 1500 lb total in the 220's very soon. Two 60+ year olds hit 300 lbs. on the bench Bill Dudley and Bill Coleman. Brian Burritt from Florida missed 510 on his second but came back and smoked 510 on his third and he won the best lifter award. Ken Millrany hit a 375 on his opener to get one on the boards and jumped to 600 lbs and couldn't lock it out. He came so close to getting this lift, I'm sure he will get it up in November. David Pate from GA. hit a 470 with more in the tank in the 242 masters division. Chris Burnette from NC hit a 500 lb. deadlift in the 275 masters class. Chris is moving up with his deadlift in every meet. The Alabama guys Josh and Mike, both guys are about 6 foot, 20 with rack heights well over 20 both did a great job. Both of these guys are strong with not much technique (1565 and 1165 totals) but this will come in time but overall very impressive. Jim Cherry is a very thick and muscular guy, Built perfectly for the sport, very strong but also lacking in technique. He moves weight so quick and explosively but he has to think a little more and be more in control and then watch out. He will hit 1700 lbs. in no time! Charles Eddins 55 yrs. old and what an impressive 565 deadlift and he curled 170 lbs. Tim McLaughlin from Penn. Totaled 1680 raw in SHW class and almost went 9 for 9. Big Dean Nichols from SC is one of Tee Meyers buddies. These two go

at it at every WNPF meet. Tee talks smack and Dean gives it right back to him. Many lifters probably think they don't like each other but this is what I was talking about earlier, these guys love each other. Tee helps Dean to pull more with a friendly competition. Dean is about 130 lbs. heavier than Tee but they try to out deadlift each other all the time. This time Big Dean came out on top with a 780 lb. pull and this was his limit today. If a fly would have landed on the bar Big Dean would have missed this attempt. Also I forgot to mention he did this RAW. 800 lbs. is just around the corner and it couldn't happen to a nicer guy. We will see you all at the WNPF World Championships in November. (courtesy of the WNPF)

*=American Records. !=State Records. The annual Bill Beckwith Memorial Powerlifting and Single Event Championships was held at the Fulton Ave. Grand Rapids Salvation Army facility. Meet Director Richard Van Eck, our American Drug-Free Powerlifting Federation President, was a long-time friend of Bill Beckwith. Many lifters who knew Bill continue to support this memorial event. The "Sal" facility turned out to be a great venue, as the administrators were super-supportive as they ministered to the needs of the lifters. The relationship between the meet directors and the "Sal" staff was so good that The Salvation Army agreed to allow the ADFPF to host their 2009 Single Event National Championships there on March 14th. We encourage all ADFPF members as well as new members to get prepared for this 2009 event so that they will be able to qualify for the 2009 WDFPF Single Event World Championships held in Bradford, England on June 5-7. In that World championships lifters may compete in one, two or in all three powerlifting events; they may select either or both the unequipped or equipped divisions. Thirty-eight, participants arrived to compete and concur, which was 34 men and four women. The competitive options included unequipped and equipped divisions in powerlifting as well as unequipped and equipped divisions in each of the single events (squat, bench press and deadlift). Twenty-nine lifters selected the unequipped division with nine entering the equipped division. As usual, the meet equipment was top notch thanks to Dick's Eleiko Kilo weight plates, electric squat racks, etc. The heavy trailer was delivered to Grand Rapids thanks to ADFPF meet director and referee, John Jackim. Officiating this event was Dick Van Eck, Jack Bowen, John Jackim and the Gedneys. Scoring table crew was Jan Van Eck, Barb Bowen and announcer Greg Drobny. The many outstanding attempts

led to setting 116 records with 25 athletes qualifying for international competition. Very impressive to say the least. The breakdown of new ADFPF records included 38 American powerlifting records with eight American single event records. And, 62 powerlifting state records were set with nine single events state records. The Illinois, Indiana, Michigan and Wisconsin records have been updated. Two Canadians traveled from Ontario to join the unequipped division competition. Eddi Crossland, 74 years of age won his Category in the 90 kg. class and established a new personal best in the bench press event. Adrian K. Ninaber who coaches Eddie Crossland, won the 125 kg. class. The following outstanding athletes established American records in each of the four powerlifting events: Carol Burr (70 kilo class), open and M3 Categories; Jasmine Todd (90 kilo class), open Category; Todd Greenman (67.5 kilo class), M1 category and Kenneth Donnelly (90 kilo class) M6 category. David Wilson (67.5 kilo class) set four American and four State records in the Equipped Division, M3 category and three American and state records in the unequipped division. Lifting in both divisions of powerlifting did not seem to phase this outstanding lifter. Dennis Stouder (+145 kilo class) of Nappanee, IN set both an American and State records in the equipped division single event squat thereby qualifying him to compete in all three events of the 2008 Single Event World Championships. Other meet athletes who are also on the USA Team traveling to Antwerp Belgium for this world championships are Wisconsin's David J. Walker (110 kilo class) and Michigan's Tim Andrews (100 kilo class). The following participants established American and state records in the unequipped division of the Single Event Bench Press: Koley Hockeborn (63 kilo class), open and M2 categories; Wayne Nicolen (90 kilo class) M3 category; Mark LeClair (100 kilo class), M2 Category; DuWayne Burr (100 kilo class) M3 Category and Jerry Millikan (+145 kilo class), M3 category. Two participants set American and state records in the Single Event Bench Press equipped division.: Doug Finley (100 kilo class), M5 and David Walker (110 kilo class), M1 and P/F/M categories. Quest Diagnostics carried out the mandatory 10% drug testing required in all ADFPF and WDFPF competitions. The laboratory reports indicate negative use of banned substances. Following the competition the athletes, coaches, officials, friends, relatives and other spectators helped to put away chairs, fold the tarps protecting the gym floor, carry out and load the competitive equipment in the waiting

trailer. As a relatively small organization, the ADFPF develops fellowship in that everyone is friendly, helpful and encouraging towards one another including those who host and runs competitions. Anyone who has hosted, or been involved in running a meet, knows how tiring it is at the end of a long day to tear down the meet site. Each meet official was grateful to have such supportive people in the organization. Amazingly everyone stayed throughout the awards program to cheer and say "good job" to one another. Another nice gesture was made by Gary Morrison who took pictures of every lifter's opening attempt offering to e-mail pictures at no cost to the participant to any interested athlete. Many thanks Gary. (Thanks to Judy Gedney for results)

AMERICAN DRUG-FREE POWERLIFTING FEDERATION • Active & Non-active Membership Application Form

Complete this form and mail with membership fee to: ADFPF, 27 ELMO DRIVE, MACOMB, IL 61455

Need more information? Go to: <www.adfp.org>

ADFPF Mission Statement: To provide all amateur athletes with legitimate drug-tested powerlifting, Strongman/woman, Highland Games competition through local, regional and national championships, while encouraging the growth of international amateur drug-free competition. To insure that the ADFPF as well as all ADFPF competitions are governed with integrity and by the highest standards of meet structure, officiating and organizational administration.

Conditions of Membership: As a condition of ADFPF membership, I commit to obeying all ADFPF rules, policies, drug testing requirements and procedures. Additionally I agree to UNANNOUNCED Out-of-Competition and Target Drug Testing. I understand the rules, regulations and drug testing procedures are at times subject to change and as a condition of continued membership, I agree to obey all such changes. I will voluntarily submit to any ADFPF and/or WDFPF drug testing procedures as stated in their rules. I understand that my ADFPF membership may be revoked, temporarily or permanently suspended and/or denied for my failure to obey ADFPF/WDFPF rules, regulations and/or drug testing procedures. If I test positive for a banned substance, I agree that the results of the test are conclusive, and I further agree to accept the consequences of the positive test regarding my membership.

As a condition to ADFPF membership, I understand and accept that I am prohibited from using any substance or "doping method" banned by the ADFPF/WDFPF. I accept sole responsibility for what I take into my body and should I consume a banned substance unknowingly and test positive for that banned substance, I shall be solely responsible for consumption of that banned substance and shall accept the results and consequences of that test.

If I am suspended from membership for any reason, including testing positive for a banned substance or doping method, I permit the ADFPF and the WDFPF to publish my name as a suspended member and/or member who is suspended for testing positive for a banned substance or doping method on the internet, in Powerlifting USA, in RAW POWER, or any other publication that the ADFPF and WDFPF so choose.

(45+)			
R. Gray 340	DEADLIFT	(45+)	340
R. Gray 340			

Venue: The Fit Stop. Special thanks to Mike Wider and Jon Gabriel Smoker. This meet featured two people who had been out of the Iron Game for a while and another who's been at it for 37 years. Ron Gray and Marianne Bischoff came up from West Lafayette and lifted very well, both getting PRs in the bench and deadlift. Mike Wider, multi AWPC World champ and record holder, used this as a little tune up for the worlds and made a smooth 450 at 148/60+. (thanks to Jon Smoker)

*=Best Lifters. A huge thanks to head judge Jim Voronin, side judges Maria McCullough, Courtney Gathright, score keeper and meet director Tom McCullough, co-meet director and announcer Josh Bryant, and the spotters and loaders. Without the hard work of these individuals, the meet would not have taken place. A special thanks to our sponsor John Inzer and Inzer Advance Designs and the Europa hosts Ed & Betty

Hello fellow lifters. Please read this press release in its entirety as there is some very important information in it. I wanted to provide everyone with the following update on developments and progress toward the 2nd Annual Raw Unity Championships. I would also like to thank Mike Lambert for his gracious help and support of Raw Unity.

Powerlifting USA Press Release

Since all federations have now had their national meets, it is appropriate to talk about what is next. Did you do well at your chosen federation's national meet? Well, in all fairness so did many other lifters. So which lifters are actually deserving of being the best raw lifter in their respective weight classes? Come and find out at the 2009 Raw Unity Championships; where the best lifters regardless of federation are invited to compete under one roof with a common set of rules.

Web Site: In case you are not aware, the official meet web site is <http://www.rawunitymeet.com>. Most of what you need to know about the meet will be posted on the site, along with each newsletter, entry form, and any changes that may occur. If you know of anyone that is interested in competing, attending, or helping out at the Raw Unity Meet I ask that you direct that person to the web site or my email address for information. Many thanks go out to Bud Lyte and BMF Sports for building and maintaining the site.

Raw Unity Championships Documentary: A professional film crew has been put together to do a documentary on the 2009 Raw Unity Championships. We will certainly focus on the lifts but more importantly we will be profiling

several lifters from the competition and showing more about the people that participate in the sport of powerlifting (with intimate interviews) as well as the sport of powerlifting itself. I will be sure to keep everyone informed as the details continue to solidify. My intention is to market this production to the likes of Spike TV and other similar channels with the goal being to get the documentary on TV.

1 Day Event: The 2009 Raw Unity Championships will be a 1 day event. It will be limited to 50 full power competitors and 20 bench only competitors. The competition will be on January 24th in New Port Richey, More information can be found on the web site. Qualifying totals will be accepted up until December 31, 2008 and we are now taking applications. The qualifying totals for each weight class can be found on the home page and you can use any meet to qualify just as long as you can verify your results as being done raw. For qualifying purposes the definition of raw is whatever that federation says it is. For example, if someone competes in the APA then they are allowed to use the monolift and knee wraps. However, once they are at the Raw Unity Championships they are subject to the rules and regulations that we have outlined specifically for Raw Unity. These can also be found on the web site.

Sponsors: We have been blessed to have BMF Sports, APT Pro Straps, Titan Support Systems, Critical Bench, Powerlifting USA (??), and AtLarge Nutrition back on board again as sponsors for the 2009 event. The actual prize money is still being determined but it looks to be the same as last year.

Meet Venue and Shuttle Service: The Raw Unity Meet will again take place at the Quality Inn & Suites Hotel and Conference Center

in New Port Richey, Florida, which is 31.54 miles north of the Tampa International Airport. Room rates of \$69/night should help to make the event affordable in this tough economy for those that attend.

Sanctioning: The 2009 Raw Unity Championships will be a non-sanctioned competition. However, Jon Hall at Powerlifting Watch does recognize the competition and your lifts will be recorded and included in his rankings lists. If you have any questions on what this may or may not entail for you, the lifter, please email me at ericalmant@yahoo.com.

Kilos or Pounds? Although I agree that this is the United States of America and that we use pounds, the Raw Unity Meet will be in kilos. We will use a set of Ivanko Chrome Competition plates for the meet and would much rather know that the weight on the bar is accurate. We will be sure to provide lifters, friends, and family with a kilo-pounds conversion chart and announce attempts in both kilos and pounds. We will also have the Bar Load Software (thanks Joe Marksteiner!) projected upon a large screen so that everyone in attendance can follow along in real time. The warm up area will be in pounds.

Entry Fees: The entry fee for the full power will again be \$60 and for bench only it will be \$50. This will be payable by check, money order, or PayPal. I would advise that you get your entry fees in early not only to help me out and make my job easier, but to let your fellow competitors know who will be coming and competing. We will maintain an active list of those competitors that have registered and paid their entry fee on the official web site.

Drug Testing: A minimum of 10% of those that enter the tested division will be drug

tested. Please know that if entering the tested division that you have as good a chance as anybody at being tested. Every lifter that enters the drug tested division will be required to send a second check with the entry fee for \$100 to cover drug testing. Therefore, if you are entering the meet under the tested division, you will make one check out for the entry fee and one check out to cover the drug testing. I will not cash the second checks because after the meet all of the checks will be shredded except the people that get tested. If they pass, then the check is torn up. If they fail, they are out \$100 and I do not need to worry about tracking them down to pay for a failed test. I believe that this will help to keep things honest for those of you that want to compete in the tested division.

If for some reason a lifter decides to switch divisions from tested to non-tested and vice versa, they simply need to notify me of the change. I will even accept these changes the day before the meet. However, I will advise anyone that originally enters the non tested division and but wants to switch to the tested division to have their check book handy, because they will be required to write a \$100 check just the same as the others in the tested division.

As always, if you have any questions at all please do not hesitate to contact me at ericalmant@yahoo.com. I return every email that I receive.

I thank each and every one of you for your time and support.

In Strength and Health, Eric

The WABDL Texas State Bench Press and Deadlift Championships were held at the Humble Civic Center. Tiny Meeker was the meet director. Let's begin with the bench press. In Class 1, Ronny Johnson won at 165 with a solid 270. At 181, Jim Kearns pushed an impressive 424.2 to beat out Juan Aragus, who benched 236.7. Lee Baker won at 220 with 363.7, but James Dunn failed to get a lift passed at 259. Big Jason Laskowski lifted in the Elite Open Division, but elected to lift RAW for this meet,

finishing with a powerful 501.5 at 259. Jason had quite a struggle to make weight, but came in right at 259. We had on lifter in the Junior Division: Dustin Dees at 308. Dustin finished with a very strong 418.7. At Law/Fire Master (40-47), veteran Joseph Lee Chaney set Texas State Record at 181 with a press of 286.5. David Bickerstaff won in Law/Fire Open at 181 with a 363.7, and went on to set a Texas State Record on a fourth with 380.2. On to Master (40-46), where Ronny Johnson won at 165 with 270. At 181, Rolando Espinoza took the title with 226.8. John Stewart was lifting at 275 and manhandled some huge weights, with all attempts above 700. Unfortunately, he couldn't get any attempts to touch. At 308, super deadlifter Khalid Shadid won with a respectable bench of 424.2. Lance Polk won the Supers with a Texas State Record 573, which yours truly will be aiming for at the Dallas meet. In the Master 47-53 Division, we had very close competition at 181 with Paul Radmilovich of Oklahoma edging out fellow Oklahoman Mark Knutson 270 to 264.5. Paul and Mark were trading Oklahoma State Records back and forth throughout the meet. The crowd also enjoyed some close competition at 220, where Rick Vrasprier won with a 418.7, edging out Mark Gibson, who benched 413.2. Big Keith Sayles had some shirt trouble and failed to get a lift passed. At Master 54-60, Brian Kline won with a Texas State Record 391.2. Josifina Jackson lifted in the Women's Master (40-46) Division, winning at 165 with a Texas State Record 148.7. In the Open Division, world-class bencher David R. Smith won the 148s with a Texas State Record 429.7. Mark Gibson took the 220s with 413.2, and Khalid Shadid won at 208 with 424.2. Querubin Rodriguez won at Open Women 165 with a solid 110. In the Submaster Division, David R. Smith won the 148s with a Texas State Record 429.7, while Frederick Alexander took the 308s with 545.5. Crowd favorite Michael Saldivar was the star of the meet, winning the Teen (12-13) Division at 97 lbs. while weighing only 65. You can't say the Michael is "confined" to a wheelchair. He may use a wheelchair to get up on the platform, but once he's on the bench he's nothing but one impressive lifter, powering up a Texas State Record 104.5 on this day. And we discovered

after the meet that he did it on a dislocated elbow to boot! That's toughness! At Teen (16-17), Trevor Banaszak failed to get a lift passed at 123. Corey Lee won at 198 with an impressive 308.5. On to the deadlift. In the Class 1 division, David Bickerstaff was the winner at 181 with a fine 551. Lee Baker won at 220 with 501.5, and Khalid Shadid pulled a Texas State Record 650.5 to win the 308s, weighing in at just above the 275 limit. In Law/Fire Open, Joseph Lee Chaney continued his record-setting ways with a 562 at 181, following up with a 4th with 575.2 for a new Texas State Record. David Bickerstaff was second with 551. Chaney was also the star of the Master (40-46) division, where his 575.2 was also a Texas State Record at 181. Rolando Espinoza took second with 501.5. At 259, Super Bencher Jason Laskowski pulled 534.5 for the win, and John Tabarlet of Louisiana won at SHW with 418.7. We had one lifter in the Women's Master (40-46) division, Josifina Jackson, who won at 165 with 292. In Open Men, James Dunn won at 259 with a Texas State Record 672.2. Khalid Shadid took the 308s with a Texas State Record 650.2, and John Tabarlet of Louisiana won at SHW with 418.7. Our lone competitor at Open Women was Querubin Rodriguez, who won at 165 with a 286.5 pull. James Dunn was the winner in the 259 weight class of the Submaster Division with his Texas State Record 672.2. At Teen Men (16-17), Trevor Banaszak took the 123s with a Texas State Record 330.5. At 198, Corey Lee pulled an amazing 512.5 for a new World Record! Alex Kendrick won at 220 with a Texas State Record 426.4. A.J. Mangum was the sole competitor in the Teen Men 18-19 Division, winning the 181s with an impressive 633.7. Courtney Gathright while Tiny Meeker was the M.C. Tiny once again had one of the most experienced judging crews in WABDL for this meet: Jim Snodgrass, Texas State Co-Chairman Brian Welker, and Texas State Co-Chairman and National Collegiate Chairman John Hudson. Spotters were Big Craig Murrow and even Bigger Blake Sterling, two of the finest spotters in the sport. Craig and Blake were backed up by Safi Sasi. Sponsors were Welker Engineering Company, Welker Competitive Edge Gym, Inzer Advance Designs, Labrada Nutrition, Dr. Charles Hilborn- Discover Chiropractic, Casa Del Pueblo, GLC 2000, Phil Baumann, Aquavibe, House of Pain, Camille "The Boot Lady" with Universal Boots, Randy Risher Fitness, and Tiny Meeker's Power Station. Awards were swords provided by Charles Venturella. (from John H. Hudson, Ph.D.)

PR BELT

A big step forward in Powerlifting Belts! For the first time ever a powerlifting belt provides you with the power to fit yourself differently each set, precisely how you need it. The new, patented PR Belt™ (POWER-RATCHET BELT™) gives you the freedom of unlimited adjustability and precise fit.

• Unlimited adjustability. Imagine being able to fine-tune your powerlifting belt to the exact feel you want for each set. You can easily calibrate the support of the PR Belt depending on the intensity level of each set, whether it's a warm up, a work set or maxing out. When you change your gear you need a different belt setting. Each layer of gear and clothing you put on or take off requires a slightly different fit of your belt. Easily done with the PR Belt! Wear it however you feel at any time. Holes of a buckle belt might not accommodate but the PR Belt does! The PR Belt gives you the power of selection. Just ratchet it forward or back. It's easy!

HOW THE PR BELT IS WORN

1. Just wrap the belt around your waist like any normal belt.
2. Place the leather end of the belt through the stainless steel tongue loop, then place the nylon strap through the ratchet center slot and pull snug.
3. While holding the nylon strap tight begin ratcheting the belt and release your grasp of the nylon strap.
4. Ratchet/tighten belt as desired.
5. To loosen, with your middle and index finger just pull up and hold open the spring loaded ratchet safety lever. Next open (180°) the ratchet all the way until it can't open any more. At this point the nylon strap will be loose and you can open the belt by pushing out with your tummy or using your hands.

- It's quick. The PR Belt can be tightened to exact fit in seconds and released instantly with one simple movement.
- Saves your energy. Tightening the PR Belt is absolutely no strain. With the PR Belt there's no need for assistance to get your belt tight.
- Quality. Riveted and lock-stitch sewn with corrosive resistant hi-density nylon. One solid thickness of the finest, select, exclusive leather. TIG-welded apparatus. Finished with top quality, fine suede which provides a non-slip surface.
- Very secure. The belt automatically locks until you manually release it.
- Hand-crafted in the USA. Patent # 5,647,824

Johnnie Jackson
The World's Strongest Bodybuilder

PBs

- Bench - 545 lbs.
- Deadlift - 804 lbs.
- Squat - 825 lbs.

JACK YOUR RAW BENCH BY UP TO 110 LBS.

Every time you cinch up your weight belt and chalk your hands, you have one goal in mind – demolish your PB! That's why you need the Cell-Tech™ Hardcore/Nitro-Tech™ Hardcore Stack. A scientific study showed that this hardcore stack forces a massive five times (86.4 vs. 14.3 lbs.) more strength on your raw bench press than a placebo in a mere eight weeks! In fact, one extraordinary test subject using the Cell-Tech Hardcore/Nitro-Tech Hardcore Stack jacked up his max bench press by 110 pounds! What's more, the Cell-Tech Hardcore/Nitro-Tech Hardcore Stack was also shown to increase leg strength by more than

double (123.2 vs. 34.6 lbs.) and the same extraordinary test subject also added 160 pounds to his max leg press.

The Cell-Tech Hardcore/Nitro-Tech Hardcore Stack is scientifically designed to pile on the mass you need for unrelenting strength gains! Imagine, in a matter of weeks you'll be that guy who sets up for a set and everyone around you will stare, stunned by the sheer number of plates you're about to lift. This could be you. If you're ready, then prepare to see raw results in no time and eclipse your totals when you commit to using the world's most powerful stack – the Cell-Tech Hardcore/Nitro-Tech Hardcore Stack!

- Scientifically Shown to Add 5 Times More Strength Than a Placebo!
- Jack Your Raw Bench by up to 110 lbs. in Only 8 Weeks!
- America's #1 Selling Musclebuilding Stack

By signing this application I agree to submit or give permission for my son/daughter to submit to any drug testing procedures during or after a competition by Officials of 100% RAW. I hereby also agree to accept the results of such testing and will not challenge the results in anyway. I further agree that I will not sue the 100% RAW Powerlifting Federation for injuries that may occur during competition or while traveling to or from a competition. I do realize that Powerlifting is a dangerous sport and by signing this membership application, I have chosen to compete in Powerlifting at my own risk.

Push Pull Raw Best Lifter: Don Anneser. Push Pull Best Lifter: Joshua Flores. Bench Raw Best Lifter: Bruce Swanson. Bench Best Lifter: Lou Saviano. Deadlift Best Lifter: Arthur Klunduk. Curl Best Lifter: Mike Peters. Venue: Metal Health Gym. Special thanks to Nic Ugolic, the staff of Metal Health Fitness, our judges, spotters and loaders who did an excellent job putting on an awesome meet. The spotters did some real good saves especially one lift where the weight went flying over the lifters jaw. Although the claim for bench shirts is joint protection I can only wonder if it is worth the trade because they are getting to be more and more hazardous in other ways. The majority of the lifters competed RAW and we are seeing more and more RAW lifting in the APA. Thanks again to all who organized, worked at, judged, and spotted at this event and special thanks to the spotters who did an awesome job keeping the lifters safe. (courtesy of Scott Taylor APA President)

Wharton bacmeback to his alma mater to win the 220 class with a nice 475 bench and also took home the other best lifter award. Sam Hess, from Hancock, MD, won the raw 220 class with his impressive 430 bench and he also won the overall best lifter award for the teen raw division. The best lifter award for the teen division was won by Dustin Wharton, who lifted 305 pounds. This year's meet also included a body rep contest. Chuck Cloud, from Voorhess, NJ, tied David Pezzonite, from Slaveville, WV, with 22 reps in the lightweight class. Berry Clark did 25 reps of 275 to win the heavyweight class. "This is a drug free competition in which all competitors can display their God-given natural ability while following a strict judging format. Competition is exciting and it promotes healthy living and motivates men and women of all ages to get involved in some sort of physical activity," says Miller. Special thanks to my Dad, Mike Miller, Andy Panone, Carl Seeker, Chris Shrout, Tony Smit, Anita & Dillon Arnold, and those who participated and came out to support this event, and especially PLUSA. For information

on next year's competition, which will be held in June, call 301-777-0644. (results courtesy Miller's Ironhouse)

WHO CAN YOU TRUST?
ASK THE DOCTOR MAURO DI PASQUALE, M.D.

Dr. Di Pasquale, the father of low carb cycling diets, including his ground breaking Anabolic Diet, Metabolic Diet and Anabolic Solutions, is one of the most respected names in powerlifting.

The MD+ line of products that he formulated and manufactures, and which include the ground breaking Exersol and NitAbol, are the best nutritional supplements for powerlifters available today. That's because they are formulated by the one person in the world with the knowledge, credentials, qualifications, reputation and expertise to do the job right.

His four decades of medical, nutritional and powerlifting experience and expertise, along with his two decades as a competitive powerlifter, which culminated in his IPF and World Games gold medal victories, give him that all important edge..

Trust my books and supplements to help you maximize your strength and lean muscle mass.

T. Sheehan 655 440 505 1600 This meet featured another amazing performance by Lynne Boshoven as she put together her best total ever at any age, any weight. Now over 50 she doesn't even need to make weight anymore, usually coming in at around 160, compared to some meets when she was younger and was over 190. It just doesn't compute. At the other end of the spectrum was young Stephen King who put together his 1st total of 600. Way to go Stephen! The meet was unfortunately marred by an accident involving his Father, Mike. He used a new bench shirt he was not used to and his tricep gave way and the bar came crashing down on his nose. As is often the case with this type of injury, the bar doesn't travel far enough to do severe damage, but he did have a bloody nose and was pretty shook up, which is understandable. But everyone was very relieved that he didn

UNL=UNL Gear, Venue: Pitbull Gym. Raw & Overall Best Lifter: Taylor Stallings. Best Lifter Push Pull: Juan Perez. Best Lifter Bench Press: Rich Cowser. Raw Best Lifter: Joe Hill. Best Lifter Curl: Bill Bradford. A very special thank you to Pitbull Gym of Tampa for saving the day. The event was originally supposed to be held in Zephyrhills and close to the meet date I went past the facility and saw that it had closed. The event was quickly relocated and went on as planned thanks to Pitbull Gym. The lifting quality was great and several raw records were set. Special thanks to the staff of Pitbull Gym, our spotters, loaders, referee's, and other meet staff for making this a very smoothly run and efficient event. Those visiting Florida who need a "powerlifter friendly" place to train will be at home here. Several top notch lifters including Tony Conyers, and Brian Highnote train there. I look forward to the next event at Pitbull Gym. (Results courtesy from Scott Taylor)

!=NOVA Raw Records. This was a fun meet with eleven new NOVA Raw records set. Vincent James, lifting in his first meet, established records in the 8-9 year old division. Jimmy Witham benched 260 at 165. Jesse Irvin set a new squat record at 242/45-49 with 485 lbs. Semper Fi! Thank you to all the lifters for coming to the meet. As often is said, their is no meet without the lifters. Thank you to Mike Lambert of PLUSA. Thanks to Carl Seeker for the great awards. Our next meet is November 15, 2008. (courtesy John James)

Mike Schwanke out of Florida, an amazing competitor, and a 2,450 total, which put him in fourth place overall - just out of contention for the cash prizes. His numbers were 950, 700, and a rib cracking 800, and at 220, what can I say, mind-boggling! He even tried pulling 815. Wait until you see the video clips!

The final four competitors in this first flight are all world class. First off, our buddy 242 Jim Grandick was back in action. Lifting out of Big Iron in Omaha, Nebraska, Jim was injured during the WPC Worlds two years ago, but is now making (made) an amazing comeback. He did the smart thing, took some time off to regroup. Jim totaled 2,565. His numbers were 1,015, 805, and 745, which only took Jim to third overall - that's just nuts, but a cash prize is always a good thing! 242 Greg Panora opened with 1,010, but his second attempt at 1,055 looked miraculous. During the bench Greg pressed 770, but two attempts with 800, and 805 were no go. His secret weapon, which isn't much of a secret anymore, is a monstrous 800 deadlift. If you are competing against Greg, and slightly ahead after the sub-total, chances are he's going to pull at least 800 lbs. At 242 Greg totaled 2,625 and wound up winning the heavyweight division. He received \$2,500.

If that wasn't enough, 242 Brian Carroll was also in the running, but got injured during the deadlifts, possibly a small biceps tear. Brian is phenomenal; take a look at these numbers 1,050, 785, and 735. Brian smoked though the bench press event, starting with 735, 760, and finally 785. After pulling 735, he didn't come out for his second attempt; was he injured? The bar was loaded to 760, Brian came out with a black wrap around his left elbow, bravely attacked the bar, the pain was obvious; he backed away and left the platform. His final total was 2,570 which put him in second place in the heavy division. He also received \$1,500.

At 220 Sam Byrd was back again for his second PRO/AM. Last year Sam squatted an amazing 1,050 at a bodyweight of 198. He turned a lot of heads that day,

Matt Wenning - all time @ 308

even SHWs, but then he failed to make three bench attempts with 635, and it was over. Wearing TITAN support gear, Sam opened with 1,050 lbs.; he went down hit about parallel, and came back up. He got red-lighted. Jon Grove set up Sam for his second attempt. Sam went down this time a lot tighter, and from my point of view, slightly lower, but he got red-lighted again. His third attempt got forward at the bottom, and the spotters jumped in. Sam is without a doubt one of the strongest lifters in the sport today.

I also want to mention another 242 competitor who was injured, but did phenomenal deadlifting for the audience just the same. Matt Kroczaleski out of Michigan, and sponsored by EFS, hit the platform with three magnificent pulls, 760, 800, and a wicked 810. Great to see him make that last one!

To my surprise the first lifter to hit the stage from the heavier division was 308 Tony Bolongne. We were expecting some big things from Tony, but the bar was loaded to 160? He walked out in a singlet, not good. We were told he was injured warming up back stage, what a tough break. He was ready, we were ready. Fortunately, Tony did come back out to bench, and had no problem pressing 800 pounds; he attempted 850 twice, but no luck. Tony may have total 2,600 or more, and now I'll have to wait another year to see it?

Greg Panora won the heavywts

As you may have guessed, most of the bomb outs occurred in the 275 to SHW division. I keep in contact with competitors year round. I like to check in and see how training is going. 308 John Manly had mentioned he injured his leg, and with this PRO/AM being a high visibility show with great lifters, he wasn't about to miss it. Unfortunately, John's squats weren't deep enough for the judges. He had a grimace on his face, but I know he didn't want to miss this opportunity; a true warrior.

At 275 out of Westside Barbell, Luke Edwards was next. We've watched Luke compete in the APF, and IPA. In 07 Luke did the IPA Nationals raw and totaled 1,850. The stress on the muscles, joints and connective tissues has got to be taxing, but Luke went 700, 450, and 700. On this day, Luke opened with 930, looked great. Then he went to 1,000 lbs., but didn't come down deep enough to get the white lights. It was close, and he looked determined. Luke repeated the lift, and this time, you could see him dip at the bottom. Fantastic, up he came, the lift was passed, and Luke let out a big yell. It's great when it all comes together like that. During the bench press, Luke

opened with 680 no problem, but 705 twice seemed to stall near the top. Luke is a great deadlifter, and opened with 770, but it got a little wobbly over the knees and got red lighted. He repeated the lift with success. Then the bar was loaded to 840, a 70 pound jump, but the bar stalled just below the knees. What a fighter; keep watching this lifter as he exceeds 2500 and then 2600 next year.

Next to hit the platform was 275 Dave "Neutron" Hoff, an amazing teenage lifter, now 20, out of Ohio. A miss during his opening 930 squat attempt, Dave regrouped, and clearly smoked 930 on his second attempt. For his final attempt, the bar went to 1015, but it was a bit too much. With blood streaming from his nose, Dave shook his head "no" on the way down. The spotters quickly took it away. The rest of his lifts were picture perfect. He benched 690, 740, and 780, and then pulled 690, 770, and a monstrous 800 lbs., looked explosive and effortless. It's excellent to see this next generation of hardcore lifters.

Up next from the Ukraine, Sergiy Karnavkhov. I think he may have been wearing just a single ply squat suit from TITAN. What a bull, a fierce competitor, and like all his team mates from the Ukraine, unparalleled squatting and deadlifting ability. Sergiy had arguably the deepest squat, and he made it look easy. He was successful with all three attempts, 930, 990, and 1,035. His Achilles' heal is his bench press, 595 opener, and two misses with 630. If Sergiy could develop a 700 or 750 bench he would clearly be a top contender. Not to disrespect his trainers, Sergiy may want to consider a bench seminar here in the States. His deadlifts were done all raw, 725, 760, and then a huge 790. He let out a primordial scream, it was awesome.

Lifting out of Westside Barbell 275 Jeremiah Meyer was up next. He bombed out in the squats. He opened with 930 lbs., but it looked a bit shaky throughout the lift, and he cut it high. His second attempt was 970, and he was more in the groove, came down deeper, but not deep enough. He gave 970 a final attempt, got down to parallel, but during the dip he lost his balance and the spotters jumped in. It was over.

308 A.J. Roberts, just 23, and now living in Kentucky totaled 2234. When we first met A.J. he was training with Brent Mikesell out of Washington State. Originally from England, A.J. is planning to move his family to Ohio, and train at Westside Barbell. On this day, A.J. got his opener, a beautifully executed 935 squat. Two attempts with 1015 were deep, but not enough pop out of the hole. A.J. followed up with a 705 bench and 705 deadlift. I can only imagine what a year at Westside Barbell will produce?

Out of "Strength Beyond & Fitness," Kalamazoo, MI 275 Dain Soppelsa was up next. Dain opened with 950. It started a little shaky, but Dain got it down deep. As he came out of the hole, he drifted slightly back, and the spotters jumped in. The audience collectively let out a soft oohhhh, as with every competitor, we all want to see them make their lifts. Dain repeated the lift, sunk it, but got stuck in the hole. A third attempt with 1,000 pounds was a bold move, but again he drifted back and he was out of the show. There's no doubt he can handle this weight, and take it down deep, but not today. 308 Mark Bell was

next. Mark owns "Super Training Gym" in Sacramento, CA. He's a positive advocate of power and strength. He opened with 960, took it down deep, but as he began to raise up he drifted to the right and the spotters jumped in. It had the appearance of a misload, but that was not the case. His second attempt was misgrooved, but his third attempt was on the money, a quick dip at the bottom, but the judges thought otherwise. We were disappointed.

This year a handful of 308/SHW did do their homework in preparation for this PRO/AM, and as a result we watched 308 Matt Wenning, the only competitor to go nine-for-nine, a brilliant display of intelligent, planned numbers leading up to a unparalleled total of 2,665. His total was a new 308 World Record. Moments later Matt's total was taken away by 308 Chuck Fought, who is just 22. Chuck lifted after SHW Matt Wilson, but I want to mention this powerhouse now. Chuck totaled 2,670. This kid is the real deal and lifting very maturely for such a young age. Matt Wenning's numbers were 1,085, 815, and 765. Needless to say he wasn't playing it safe, he was going all out, and just 35 lbs. away from a 2,700 total, amazing. Matt won the best squat, and best bench press awards, each \$1,000. Chuck Fought's numbers were 1,080, 715, and a kick-ass 875 deadlift. It was one of those moments in powerlifting when someone does something extraordinary. Chuck won a \$1,000 for that pull! Again, the 2,700 lb. threshold is just 30 lbs. away, but at 22, Chuck could

Sakari Selkainaho of Finland with Louie Simmons of Columbus, OH

be looking at 2,800. Both these incredible lifters train out of LexenXtreme.

308 Mike White was up next, looking like the poster child for Powerlifting. Mike operates "Strength and Beyond Fitness" in Michigan. He opened with a smart 975, he took it down, but just not deep enough for the judges, looked to be about parallel. He jumped to 1,050, and then 1,070. Although he looked assertive and powerful, both attempts were caught by the spotters in the hole. So frustrating! We'd like to see Mike finish this event.

Out of Jacksonville, FL, up next was 275 Charles Bailey who is now 44, and stronger than ever. Charles has competed in several federations, APA, USPF, APF, and IPA, probably more, but these are the ones that come to mind. No wonder Elite Fitness Systems sponsors Charles, what better way to get the "EFS" name out nationally than with a stud like Charles winning the 275 class most every time. While a majority of competitors pick one or two meets a year, Charles will compete four or more times a year, and sometimes back to back. Charles opened with 1,000 lbs., down and up! The audience was impressed. Then he did it again with 1,050 lbs.! He gave 1,080 a ride, but the judges called it no good, maybe depth, but it still looked tremendous. During the bench, Charles gave 705 a try three times. The first attempt rolled out of his grip at the bottom toward his face. The second attempt looked solid. The judges thought otherwise, not locked out. His third attempt also rolled, but this time toward his belly. So frustrating! I

think he may have tweaked a bicep, but Charles is a smart lifter, and I'm sure he's on the mend.

Up next, and the only SHW to finish the show was Matt Wilson. Matt's had an impressive career as a junior and now, at 28, he's a well established lifter who has the respect of many in this sport. While some competitors sacrifice a career and family for powerlifting, Matt's been successful at balancing all three. On this day, the squat bar was loaded to 1,015 lbs., down and up he went, white lights. Matt took a 65 lb. jump, but it was a little too much and he passed his third attempt. During the bench, Matt produced two clean presses of 685, and 740 lbs. An attempt with 760 got out of the groove. Finally during the deadlifts, Matt opened with 675, no problem, but took another bold jump of 70 lbs.; too much. Matt ended the day with a 2,430 total. He possesses the ability to hit bigger totals; and we'd like to see 2,500 lbs.

Two more impressive lifters to go, first up was the current world champion, SHW Donnie Thompson. He looked tremendous in his INZER squat suit. One of the more conditioned Supers I've ever seen, Donnie trains with a number of different tools to build his strength, including Kettlebells (check out one of his seminars). Donnie opened with 1,080. It was a toy; though he didn't get his depth, but the way he handled the weight left everyone eager to see more. I couldn't believe how fast he popped up, like it was 135. Donnie trains at "The Compound" in Columbia,

South Carolina. I still haven't made it down there, but I'm planning on it. He lives there! Donnie came back out, and this time the bar was loaded to 1,160 lbs. It looked a little rushed, shaky, and the big man fell back into the arms of SHW Matt Smith. Next the bar was loaded to 1,200 lbs. This time, he looked tight, a smooth descent, but he cut it a little high before coming up. You should see the size of Donnie's quads, no wonder he toys in the 1,000 plus pound squatting realm. No passed lifts today, but he can certainly handle the weight, and it's just a matter of time before he sets a squat record. I just hope its here at the PRO/AM under the scrutiny of Bob and John. Arguably, if you can get a squat passed at the PRO/AM, it's a major accomplishment that's valid.

Finally we come to the last lifter. At 43, Chuck Vogelpohl looked chiseled, not an ounce of fat. Chuck competed at 275. He had the largest opener in the flight, a whopping 1,120 lbs. Chuck is by far one of the most energizing powerlifters ever to walk the planet. No wonder he's emulated by so many other lifters, I guess it's a form of adulation, but ultimately there can only be one Chuck Vogelpohl. During his descent with 1,120 lbs. he was more than deep enough. His helpers/handlers were screaming commands throughout the lift, I don't know if it helps or distracts, but with such tremendous weight Chuck's knees buckled in the hole, and the spotters moved in and grabbed the bar. He appeared mentally undamaged, and walked off the platform as if he did a warm-up set. During his second attempt he repeated his opener, everyone calmed down, and this was to be his most superb effort. Down to parallel, and from my prospective, slightly deeper, then back up again - amazing, but no lift. Not deep enough? If you watch the video, Chuck ascends, but falls slightly forward before racking. My guess that was the reason for the red lights, but man what an effort! 1,165 lbs. was now loaded on the bar for his final attempt. I think he moved his legs out wider? Chuck took the weight off the rack, and on the way down drifted back into the spotter, it was over. What a tough break, but Chuck having competed in so many competitions, appeared at ease, the mark of a professional.

What a show, what a show, looking forward to this event next year. Thanks to Lou, Doris, Mike, Marcia and everyone for their hospitality.

Chris Taylor looks good lighter

LIGHTER = A load which would permit the completion of 4 or more reps more than that prescribed for the set (i.e. if the set calls for 10 reps you choose a load which you can get for 14+)

SETS AND REPS KEY:
1x3 = 1 post-warm-up set of 3 reps

Disclaimer: I have purposely left the loads and routine in general somewhat vague as I firmly believe the reader must experiment within the parameters of the general template provided. Your physiology, level of physical preparation, and life stressors etc. are all unique and thus mandate a routine which has some leeway.

Training for your bench should be performed as normal. Squats are an exception in that they are on "cruise control" for the duration of this program with the focus being on building your pull. Perform box squats off a low box for 8 sets of 2 reps of speed work. To read more about the concepts presented in this article and generalized powerlifting training you can go to the following websites:

www.wannbebigforums.com

(Powerlifting/Olympic Lifts forum)
www.westside-barbell.com (collection of articles written by Louie Simmons)

www.elitefts.com (articles etc.)

Program Goal: Prior to commencing this program you should set a realistic target goal (realistic being a 20-40 lb. increase). Any percentages listed below will be based upon your target goal (ex: target = 500 lbs - 84.5% = 422 lbs).

WEEK 1: Reverse bands: 1x3 med, 1x3 heavy

WEEK 2: Against bands: 2x3 heavy

WEEK 3: Reverse bands: 1x3 personal record (pr) attempt, then 1x3 medium

WEEK 4: Against bands: 1x3 pr attempt, 1x3 lighter

WEEK 5: 84.5 Percent for a triple (all gear - regular deadlift with no bounce off deck)

WEEK 6: No pulls!

WEEK 7: Box pulls: 3 heavy singles

WEEK 8: Against bands: 3x3 heavy

WEEK 9: Box pulls: 3 singles with increased load from week 7

WEEK 10: Against bands: 1x3 pr attempt, then big single

WEEK 11: 87.5 Percent for a triple (all gear - regular deadlift from floor)

WEEK 12: No pulls!

WEEK 13: Box pulls: pr attempt

WEEK 14: Against bands: pr attempt, then 1x3 lighter

WEEK 15: Reverse bands: go up to goal weight plus 5 pounds!

WEEK 16: Floor pulls: 90 percent for triple!! (All gear)

WEEK 17: No pulls

WEEK 18: Work up to last warmup, suit straps down, 10-12 days out from competition or max attempt

COMPETITION OR MAX ATTEMPT: Go get your goal!

ASSISTANCE WORK:

DEADLIFT DAY:

- Alternate barbell rows for 1 ultra heavy set and one down set with dumbbell rows (same rep scheme). On "no pull" weeks skip the rows.
- Alternate stiff-legged deadlift off a 3 inch box (no belt) and seated good mornings. Do both for 2x5 medium. On "no pull" weeks skip this exercise.
- Chins: 3x10-15 or until failure if you cannot get the required rep count. Follow with front lat pulls: 3x10-15.
- Machine rows: 3x10-15
- Db shrugs: 2x20 (no straps)
- Add seated cable rows for 3x7 on "no pull" days.

SQUAT DAY:

- Reverse or regular hyperts: 3x10-15
- Weighted abs (various exercises): 3x10-15

SUPPLEMENTS:

I SUGGEST YOU FOLLOW a supplement regimen similar to mine. I use the following products daily:

- Nitrean protein by atlarge nutrition (www.Atlargenutrition.Com). This is a protein-only blend of 3 types of whey (isolate is the most abundant form), casein, and egg proteins. It is a highly versatile protein that can be used for all purposes (pre and post workout, prior to bed etc.).

- Opticen (atlarge nutrition) post workout/meal replacement supplement. I use this product to help with post workout recovery and to add some additional quality calories when needed.

- Ets (atlarge nutrition) for speeded recovery and to aid with joint care. Ets is a very unique product (the only one of its kind on the market to my knowledge) which reduces muscle soreness, improves recovery, and can help with minor joint pain (something which all powerlifters experience from time to time).

Do not neglect diet, get enough protein and rest!

Sgtrock804@yahoo.Com

Semper Fi

OUR GOAL WAS TO SIMPLIFY THE SUPPLEMENTS BUYING PROCESS

Why is Buying Supplements So Darn Confusing?

It isn't anymore, now that you can get everything you need all in one product.

Are you going nuts trying to make sense out of all the new-fangled bodybuilding supplements now on the market? Are you frustrated and confused by the endless array of "new" products being peddled in all of the muscle magazines?

If you're like most weight trainers, you're probably blown away by this alphabet soup of supplements. Dazed instead of dazzled. Maybe you've even stopped taking supplements altogether. If anyone can make any sense out of all this chaos then they deserve a medal.

But wouldn't it be great if you could get nearly everything you needed all in one product?

Well now you can!! It's a product called HOT STUFF and it's been delivering fantastic results to bodybuilders and weight trainers for almost 20 years now. In fact, by conservative estimate, at least 4,000,000 people have used Hot Stuff since its debut in 1989. Millions are still using it today.

The beauty and simplicity of Hot Stuff is that it combines 55 bodybuilding supplements into an all-in-one, jam-packed, turbo-charged super powder. No more experimenting with this and that. No more guess work. It's all here. We've done it all for you. Taking bodybuilding supplements was never easier.

Hot Stuff starts with an ionized whey protein base. To that we've added testosterone boosters, hormone precursors, energy boosters, fat metabolizers, muscle volumizers, herbs, sterols, and a whole lot more! Fifty-five supplements in all! Each glass of Hot Stuff is the equivalent of taking handfuls of pills and capsules.

Some of our critics have questioned the wisdom of mixing all of these ingredients into one powder. That's because

they've never tried Hot Stuff. If they had, they would know just how great this product really is. And the reason for that is synergy among all of the various ingredients. That means they all work together kind of like a symphony, making the whole greater than the sum of its parts.

But the proof is in the pudding so to speak. That's why we give you this unconditional money back guarantee. Give Hot Stuff a try. If for any reason you are dissatisfied with this product, we will refund every red cent of the purchase price.

LIMITED OFFER: CAFFEINE BALLS

For a limited time only we'll send you for FREE a \$10 bottle of our brand new CAFFEINE BALLS with every Hot Stuff order. Great before or during a workout.

(continued from page 10)

Bob Packer of Fresno, California

the 67.5 kgs. class, turned in a good performance in spite of having to help run this meet. Wendi made 8 of 9 attempts only missing her third attempt squat at 200 kgs. Wendi benched a strong third attempt at 110 kgs. and followed this with a third success in the deadlift at 185 kgs. for a 485 kgs. total. The USA's Kim Packer was the women's master 45-49 champion again in the 82.5 kgs. class. Kim nailed two great squats at 192.5 kgs. and 205 kgs. before narrowly missing 222.5 kgs. world record twice on her third and fourth attempts. Kim ended her day with a total of 497.5 kgs. for another gold medal for the USA. Also worthy of noting in this strong group of women were Monnika Rovna of the Czech Republic and Elena Stastna of Slovakia, who put on quite a show at 60 kgs. Monika got a great squat 207.5 kgs. and totaled 460 kgs., along with a 87.5 kgs. in the bench press and 165 kgs. deadlift. Not to be completely outdone here, Elena

Stastna completed three squats, bench pressed a large 97.5 kgs. and pulled three deadlifts for a total of 435 kgs. Look for a lot more from these two next year with more experience.

This year's GPC World Championships had no men entered below 67.5 kgs. This could be food for thought for possibly someday removing some of the lighter weight classes. There were four lifters entered in the 67.5 classes. These four were all in different divisions. The teenage 18-19 year old winner, Jochim Derudder of Belgium did a great 230 kgs. squat and missed 248 kgs. on a fourth for a world record. Being somewhat tall for this class, his lifting was outstanding. Derudder ended with a 575 kgs. total. Junior Bary Keehan of Ireland again of slight build, put together a fine total of 557.5 kgs. via a 205 kgs. squat, 132.5 kgs. bench press, and a 220 kgs. deadlift. Master lifter Janis Steinberg of Latvia, lifting at 50-54, put together a fine 570 kgs. total via a 217.5 kgs. squat 142.5 kgs. bench press, and a 210 kgs. deadlift. Steinberg completed all nine attempts. Azerbaijan's Rustem Musayev, lifting alone in the open division, could have done a lot more had he been pushed. Musayev got a 647.5 kgs. total for the gold via a 265 kgs. squat, a strong 162.5 kgs. bench, and a first attempt deadlift of 220 kgs.

The 75 kgs. open class was only Andras Csizsar of Hungary. Andrus, with his nearest competitor some 80 kilos behind him, sailed to a 9 for 9 win at 772.5 kgs. via a 290 kgs. squat, a 180 kgs. bench press, and an easy third attempt deadlift at 280 kgs. Yalcin Raghiev of Azerbaijan had an okay day with his 667.5 total via a 260 kgs. squat, 147.5 kgs. Bench press and 270 kgs. Deadlift, and a sure second place. However the real show here was the master 45-49 lifter Gerry McNamara of Ireland. McNamara opened with easy 330 kgs. squat and

then proceeded to obliterate the world record with a fine three white success on second attempt at 360 kgs. Wisely passing his third after giving us a lesson on squatting, Gerry went on to make two bench presses at 170 kg. And 180 kgs. and missing his third at 185 kgs. This gave him a 540 kgs. subtotal to which he added his first attempt deadlift of 232.5 kgs. for a fine 772.5 kg. total.

The 82.5 kg. open class was again dominated by another lifter from Ireland, Patrick McNamara. The very solidly built McNamara gave us a good scare as he missed his first two squats at 330 kgs. and 335 kgs. before finding his groove with 340 kgs. Making only bench presses at 185 kgs. and 192.5 kgs Patrick put together a 812.5 kilo total with his second attempt deadlift of 280 kgs. Junior lifter Jan Matcj of Slovakia was the outstanding lifter in this group. Matej put together a strong 782.5 kilo total via a 320 kgs. squat, 210 kgs. bench press, and a second attempt deadlift of 252.5 kgs. Master lifter J.J. Dunne at 45-49 put together a fine 702.5 kg. total and nearly made a world deadlift of 282.5 kgs. on his third and fourth attempts. Another master lifter of note in this class was Canada's Birchmans Pereira at 60-64, who made a strong world record squat of 228 kgs. on his third attempt and totaled 547.5 kgs. and nearly made a world deadlift at 237.5 kgs. for a 547.5 kg. total. Some great lifting here.

The 90 kg. open class was a shoot-out between Britains, Chris Jenkins and Slovakia's Stefan Sokoly. Both lifters appeared extremely powerful right out the gate and it was anybody's guess who would prevail here. Both lifters made three squats with Jenkins in front by 5 kilos. The bench press saw the tables turn here as Sokoly gained the lead by 7.5 kilos. Physically, Jenkins would've taken this class, but only made his opening deadlift 310 kgs. and missed 320 kgs. twice for 870 kgs. total. The Slovakian made three good ones and ended with 310 kgs. for a 572.5 kg. total. Third place lifter Petri Salmela of Finland wasn't having a great day and yet managed a 795 kg. total on only four completed attempts. There was also great lifting done by several master lifters. My old Ian Morris from South Africa and one of the OPC's greatest supporters had a nice day slightly over the 82.5 kg class limit in the 65-59 division via a 180 squat, 90 kg. bench press and a 160 kg. deadlift for a 430 kg. total. Pat Kelly on the other end of the age spectrum at 40-44 had a great day with a world record squat of 336 kgs. and a 845 kg. total for first place. Look at the totals of the other lifters in the 90 kgs. class and you see some quality lifting at all levels.

The 100 kg. class was divided into A and B Groups because of the large number of entries and some very close competition. The Juniors and the Masters up to 45-49 in this group with the 50-54 Masters and the Open lifters in the B group. In the A group, Pauli Rabkonen of Finland squared off against the very muscular Marco Glaser of Germany and Great Britain's Jason

Master lifter, Gerry McNamara (Ire.)

Griffith. Rahkonen was able to hold off both Glaser and Griffith with a 7 for 9 day that saw his 300 kg. second attempt squat. 195 kg. second attempt bench press, and 3 for 3 in the deadlift at 260 kgs., 270 kgs., and 280 kgs. for a 715 kg. total. The real fireworks here was the outcome of second and third place. Glaser finished with three deadlifts at 245 kgs., 257.5 kgs., and 262.5 kgs. for a 742.5 kg. total. Griffith had one deadlift left for the win at 272.5 kgs., but it barely cleared the floor leaving Glaser in second place and Griffith with 725 kgs. for third place. We will see much more from these three Juniors in the future. In the Master 40-44 Sami Kapio of Finland took a commanding lead after a second attempt successful squat at 400 kgs. and held the lead with a 190 kgs. bench press and a 300 kg. deadlift, for a 890 kg. total. Second place lifter Michel Berezna of Slovakia posted a nice 9 for 9 for a 812.5 kg. total. Third place lifter, Steve Hunter made three good squats at 250 kgs., 270 kgs., and 280 kgs. coupled with two good bench presses and two successful deadlifts ending with a 760 kg. total. Lifting alone at 45-49, Ireland's very energetic and muscular lifter Sam Graham put together a fine 790 kg. total via a 320 squat, 190 bench press, and a 280 kg. deadlift. Sam is one of the GPC's most enthusiastic supporters and contributes his time to developing our span in Ireland. Group B featured seven open class lifters and one master at 50-54. Gerry McAfee of Great Britain was a one man show in this class with his 340 kg. squat and a close miss at 377 kgs. on his third, which would have been a World record. McAfee added two successful bench presses at 180 kgs. and 190 kgs. for a 532.5 kgs. subtotal. Gerry completed a second attempt deadlift of 300 kgs. for a 832.5 kg. total.

With seven deep in the open 100 kg. it soon became apparent that the names to watch were Eddie Bilek of Ireland, Jamie Burke of Great Britain, and Jaromir Kratchovil of the Czech Republic. After some hefty squatting by all three with Burke at 380 kgs., Kratchovil at 375 kgs., and Bilek at 365 kgs., it looked like anybody's horse race at this point. All three bench pressed well with Binks second attempt 255 kg. leveling the playing for both him and Burke at a 620 kgs. subtotal going into the deadlift. Kratchovil ended with a 237.5 kgs. bench press and 612.5 kg. subtotal. Making only the opening deadlift, Kratchovil at 270 kgs. and Burke at 282.5 kgs. put them on the bench to watch Bilek of Ireland to score 280 kgs. on his first attempt, and a solid 300 kgs. on his second attempt to get the win at 920 kgs. All three of these lifters merit future attention. Burke ended in second place with 902.5 kgs. and Kratchovil in third place with 882.5 kgs.

This class like the 100 kg. class had a lot of lifters. Thirteen lifters entered in 110 kg. class with three of them being masters. There were two lifters at 45-59 and one at 55-59 with the rest lifting in the open. A very fit and trim looking Juraj Pastor of Slovakia posted a huge 360 kg. squat on his third attempt and two token bench presses at 120 kgs. and 130 kgs. due to a shoulder injury for a 490 kg. subtotal. Alan Gilbert of Great Britain got a 400 kg. subtotal and managed a second attempt deadlift success at 260 kgs. for a 660 kg. total and second place. Pastor got only his opener at 280 kgs. for a 770 kg. total and first place. Fellow master Louis Dunn lifting injured took only token squats and bench presses and made two deadlifts at 265 kgs. and 295 kgs. before two world attempts at 315.5 kgs. ended his day at a 495 kg. total and first place. The open class saw three of the major players bomb-out of competition otherwise the outcome here could have been quite different. Great Britain's Delroy McQueen missed all three squats at 420 kgs. Finland's

Kousa and Rosendahl both missed all of their deadlifts thus changing the picture considerably in this class. The first three places would be a struggle between Martin Kosnar of the Czech Republic, Bakhityar of Azerbaijan and Russia's Serge Stardubsky. Kosnar had a huge lead with his seam ripping third attempt squat at 410 kgs., while Stardubsky and Bakhityar ended with 390 kgs. and 365 kgs. in the squat. Kosnar maintained his lead with his strong opening bench press of 300 kgs. only to miss his 320 kgs. twice for a 695 kg. subtotal. Stardubsky made a third attempt a tough one at 290 kgs. after missing it on his second attempt leaving him with a 680 kgs. subtotal. Guliyev fell behind in subtotal with his 240 kgs. bench press for a 605 kgs. subtotal. Now, into the deadlifting. The tables could have easily turned because Kosnar made on his opening deadlift of 300 kgs. as 320 kgs. stopped him twice, leaving him with a 995 kgs. total and the win. Stardubsky of Russia made only his opener at 280 kgs. and missed the 320 kgs. he needed for the win twice. Guliyev opened with a strong 360 kgs. in the deadlift and missed 380 kgs. on his second attempt a little out of the groove and then chose 390.5 for the win and a new world record, but it was not to be this day and a third place finish with a 960 kgs. total. Great Britain's Steve Middleton and Kyle Vauls fought it out for fourth and fifth place with the deadlift being the determining factor and only 2.5 kgs. separating them. In sixth place with a 860 kgs. total was another of Great Britain's lifters, Matt Griffith. This guy will be heard from as he is built to lift and with a little more experience will post some big ones in the future.

The 125 kgs. class was large and went nine deep in the open division. The master lifters were no slouches here either. In the 40-44 age group there were two very good lifters and at 45-49 there was meet director Le Marshall, who had a pretty good day despite the duties of running one of the best GPC world championships ever along with his lovely wife Marie. Master lifter Kelly Thomas of Ireland literally stole the show in this class. Lifting against an ever improving Gary Boulton of Great Britain, these two represented master's lifting at it's finest. Thomas put together a world strong squat at 380 kgs., 420 kgs., and a big 440 kgs. Gary Goulton of Great Britain was vastly improved over last year's performance in Calgary. Gary buried a third attempt 365 kgs. squat for three white lights. Boulton got three successful attempts at the bench press with 160 kgs., 175 kgs., and 190 kgs., while Kelly opened with amazingly easy 250 kgs. and jumped to a successful 280 kgs. on his second. Kelly Thomas just barely locking out 300 kgs. on his third attempt. Boulton managed a third attempt success in the deadlift at 320 kgs., which gave him the record setting 1040 kgs. and first place. Meet director Lee Marshall, lifting alone at 45-49, opened with a 400 kgs. squat for three whites and

Jari Rosendahl of Finland - LEANER AND MEANER THAN EVER!

jumped a world record at 430 kgs. for a world record. Trying 440 kgs. on a fourth, but cut it short for three successful bench presses at 200 kgs., 210 kgs., and 220 kgs., which I believe was a PR of sorts. Looking tired and a little drawn, Marshall completed a slow 300 kgs. deadlift and missing 330 kgs. twice. Marshall ended with a fine 980 kgs. total for first place with a world record total. The open class found Azerbaijan lifter Rufat Aghayev going toe to toe with Rweiko Kruse of Germany. Fr first and second place while third and fourth place had fireworks between Dan Dvorak of the Czech Republic and Mattie Lehto of Finland. Pound for pound, this class had probably the finest squats in the competition. Three open lifters squatted 400 kgs. or better. Reiko Kruse got three, yes three squats at 400 kgs., 425 kgs., and 435 kgs., and Aghayev also got three squats 402.5 kgs., 420 kgs., and 430 kgs. After the bench press both Kruse of Aghayev were tied with a 685 kg. subtotal. Both lifters benched well but when the weight got to the floor the game of cat and mouse between these two started. Kruse opened with 315 kgs., which gave him a 1000 kgs. total. Aghayev opened his deadlifts with 320 kgs., which gave him a 1015 kg. total. Both lifters went to 330 kgs., but Kruse lost his balance with a wide sumo stance and fell backwards and down. Aghayev succeeded with the 330 kgs. and now has a 1015 total. Kruse needed 330 kgs. to win on bodyweight, but barely breaks the floor. Having won, Aghayev then made a half hearted attempt at 335 kgs., knowing he had already won. Both Dvorak and Lehto totaled 975 kgs. with Dvorak getting third place on lighter bodyweight. Each of these two lifters both only made five attempts. Some great lifting here and look at the score sheets for further information on the other lifters who rounded out this class.

The 140 kg. and super heavyweights were lifting together in the last session and will be discussed together. The

140 kg. open class was dominated by Jonas Rantanen of Finland opening his squat with 480 kgs., which made me believe that this guy could indeed handle his next attempt at 505 kgs. Completing his second attempt, Rantanen received three red lights for a lack of depth. Rantanen sat low with his third attempt and failed to rise. Considering he bench presses earlier in the week and squatted before this event it was amazing that he got 347.5 kgs. and 360 kgs. on his second before 370 kgs. Opening with an easy 320 kg. deadlift and jumping to 347.5 kgs. on his second attempt gave Rantanen the super total of 1187.5 kgs. A distant second place was Radovan Kadera of the Czech Republic who totaled 855 kgs. via a 315 kg. squat, 240 kgs. bench press, and a 300 kgs. deadlift. (40-44) lifter Ian Mitchell put together a fine total unopposed in this class with 780 kgs. via a 330 kg. squat, 165 kg. bench press, with misses at 227.5 kgs. and 232.5 kgs., and a third attempt deadlift 285 kgs. Finland's Kari Kalliola dominated the

Jami Ihalainen gets ready to lift

Peter Tregloan, GPC President

Jonas Rantanen of Finland - world class bench pressing and squatting

(Continued from page 39)

the body to give. It's much better to nourish these glands with maca and the other powerful nutrients in BökU™ Super Food, so the adrenaline is there for you when you really need it!
AR: I agree fully Lynn. I have seen many people diagnosed with Chronic Fatigue Syndrome and there is no doubt the high level of stimulants that they consumed daily for many years basically burned out their adrenal glands. BökU™ is no doubt one very powerful alkalizing formula. Can you explain to the readers why having your body in an alkaline state is so important for preventing disease?

Chakra Earthsong: Getting and keeping your body in an alkaline state is important for staving off illness and disease. An acidic condition is a breeding ground for disease. A good healthy pH level is between 6.5-7.00. When your body functions from a balanced pH it indicates that your cells are receiving the correct amount of oxygen and nutrients, and are able to eliminate toxins and excess waste efficiently. It is interesting to note that many weight lifters rely on protein since it is known as the building block to increased muscle density and the fastest way to lose weight and add muscle. Unfortunately, many foods high in protein, including red meat, poultry, dairy products

such as milk, yogurt and cheese, and even raw nuts and seeds, fall into the acid-forming category. The real solution for those lifters committed to high protein loading is to balance protein intake with alkaline-producing vegetables, such as dark leafy greens, fresh salads and veggie juices, and easiest of all, BökU™ SuperFood. Boku contains alkalizing ingredients that help balance acidic protein consumption, as well as regulate appetite and stabilize blood sugar. In doing so, BökU™ can help prevent, and in some cases heal, predispositions towards diseases which stem from highly acidic conditions, such as arthritis, joint and digestive problems, acne, irritability, low immunity, and a

host of others.
AR: I know a lot of readers will wonder, how does it taste?
LR: BökU™ has a very neutral taste, and is especially mild for such a green, super-nutrient-dense food. It mixes easily with your favourite juice or beverage. Here is what Mike Adams of NaturalNews.com said about the taste:

"BökU™ Super Food tastes like a rich, green superfood. This isn't some sweetened-up candy. It can be a little rich for people new to these tastes. So if you're new to superfoods, I recommend blending in a small amount (like 1/4 teaspoon) into your smoothie for 3 days, then doubling that to 1/2 teaspoon for 3 more days, then doubling that to 1 teaspoon for 3 days, and then going for 1 tablespoon (or more) thereafter. Note that chocolate will really help mask the taste, as will stevia or raw honey.

But once you really get into superfoods, you'll come to enjoy the taste. Although I still like to add sweeteners to my superfoods, I don't mind shoveling in three or four spoonfuls of this BökU™ Super Food. Tastes great to me! (But, alas, it's an acquired taste. If you've been drinking sodas sweetened with high-fructose corn syrup, your taste is so distorted by the crack-like sugars that you'll be in for quite a surprise when you drink REAL food for a change, so ease into this)." -Mike Adams

AR: In my experience of taking superfood products one of the clichés is that the better the superfood tastes the less nutritionally dense the formula is, but this is not the case with BökU™. Can you explain how you made a super, nutrient-dense formula and made it taste good?
LR: The taste is all in the balance. Boku is like a world class orchestra, the power is in how each individual instrument (ingredient) is balanced to make beautiful and delicious "Boku music".

AR: Since BökU™ is so nutritionally dense, how would you compare a daily dose of Boku to eating natural foods?
CE: BökU™ SuperFood cannot and should not replace a healthy, preferably organic, whole foods diet. We need fresh fruits, vegetables, healthy oils and fats, quality protein, and a diverse selection of complex carbo-hydrates every single day. BökU™ enhances and can easily replace synthetic supplements, and adds such an important element to the diet, it would be impossible to eat or even find the quantity and quality of food available in it on a daily basis.

AR: Now there are a lot of greens products out on the market today what can you tell the readers

why BökU™ stands out from them all?
CE: BökU™ has superior taste without compromising ingredients. It hits the nail on the head, so to speak. No other formula comes close to reaching the same level of nutrient density without fillers to mellow the intense green taste of most green foods.

AR: Where do the ingredients in BökU™ come from?
LR: Not only is Boku USDA certified organic as the seal on the container testifies we are also certified as Kosher. The combination certifies the utmost in purity and quality control.

AR: Can you explain to the readers why taking a multi-vitamin is simply not enough and why adding in a superfood like BökU™ is needed for optimal health?
CE: Multivitamins are generally synthetically produced. They contain so many different ingredients compressed into one, often large, tablet that it is difficult to know if one is absorbing and able to utilize the nutrients. With BökU™, direct delivery proves an advantage - many feel the beneficial impact immediately.

AR: Can BökU™ help Powerlifters with their recovery from intense training?
CE: BökU™ SuperFood post-workout offers a deep, intense flood of whole food nutrition. All of the ingredients in BökU™ are bio-available, meaning they affect the body right away. After heavy workouts it's important to offer nutrients for repair and immediate energy replacement, which Boku does.

AR: What about increasing oxygen uptake to working muscles, can BökU™ help in this way?
CE: Yes, because BökU™ is a green food created primarily from plant nutrients that require oxygen to grow. Green foods naturally oxygenate the body and the planet!
AR: What about muscular endurance? Can BökU™ help improve this area of training for the lifter?
CE: Yes, real endurance emerges from a strong nutritional base, so to speak; taking super-dense BökU™ SuperFood offers just that - deep, dense nutrition which feeds the body for the long haul. Fast food offers a cheap fill; BökU™ goes the distance. One of the main benefits of Maca Root is supporting the lifter in muscular endurance & muscle recovery

AR: Optimizing the body's natural hormones will definitely improve physical performance. How does BökU™ play a role in this?
CE: Feeding the body nutrient-dense BökU™ feeds the glandular system, resulting in hormonal balance. Plus, the maca powder

contained in BökU™ supports and energizes hormone levels, naturally.

AR: Many lifters have digestive issues from not eating as clean as they should. How does BökU™ help with digestion and assimilation of the foods we eat?
CE: BökU™ is fiber rich and also contains Omega 3 oils. We also didn't forget the very important probiotics, and enzymes. All of which can improve digestion, assimilation and also elimination of toxins from the body.

AR: These are all ingredients that I have my elite athletes use in their nutritional plans. Anyone that reads my column regularly knows that I am big on Omega 3's and increasing your daily fiber intake

because most people do not get enough in.

Part 1 Overview
 So as you can see BökU™ is truly a wonder source of nutrition that all lifters can take advantage of. In this time and age of long work days and our super busy schedules, many lifters do not get the quality of nutrition their bodies need. I wanted to introduce the Powerlifting community to the many benefits that a superfood like Boku can offer in terms of health and performance. I personally use Boku and that is why I wanted you to know the many positive benefits that I have found using it myself. In the second part of this series I will be discussing some more

advanced medical questions with Chief Formulator Dr. BJ Adreznin. We will take a look at some of the health conditions that are most occurring with lifters and how Boku can help in getting them under control. We will also take a look at Pharma-ceutical Enhancement and the role super foods play in keeping the body healthy for those that are using performance enhancing drugs. So until next month eat clean, train hard, and stay healthy.

If you have any questions or comments contact me at: Aricciuto@NutritionXP3.com. You can also look at my website at: www.NutritionXP3.com

(continued from page 93)

super heavyweight class with his 430 kg. squat, bench press of 365 kgs., and a second attempt deadlift of 277.5 for a 1072.5 kg. total. Second place was a walkaway for big Phil Crets of Belgium. Very tall got two strong squats in at 360 kgs. and 380 kgs. before his third was called on for depth. Crets sailed through three bench presses at 235 kgs., 250 kgs., and 260 kgs., for a 630 kg. subtotal. Young and with a

Vangie Keresey judged as well

lot of room to grow, Crets is only 25 years old and went through his first two deadlifts at 300 kgs. and 340 kgs., with greatest of skill and precision only to get to excited and in a hurry and miss his last attempt with 370 kgs. at his knees. Crets totaled 970 kgs. for second place. Another young lifter from Belgium, Gunnar DeVadder fought it out for third place with Andrus Grusas of Ireland. Both lifters succeeded with 350 kg. squats, but after the bench presses, DeVadder took a 35 kg. lead with 265 kg. Third attempt bench press. Though a fair deadlifter, Grusas could make up this 35 kg. lead with his 300 kg. third attempt deadlift and with 880 kgs. total for fourth place while DeVadder received third place 885 kgs. DeVadder, like his friend Crets, has a lot of growing to do and will be heard from in the future in this class. We can't leave this class without talking about big Dave Firzebody of Ireland. This man at 151 kgs. bodyweight and lifting in the masters 40-44 age group, presented himself as a mountain of man and had the lifts to back it up. Making three successful squats at 360 kgs., 400 kgs., and 412.5 kgs., that

was mighty impressive. Again big Dave got three successful bench presses at 280 kg., 290 kgs., and 300 kgs., for a 712.5 kg. subtotal. Making only 285 kg. deadlift on his second attempt left this big man with an impressive 997.5 kg. total and a lot of potential for the future.

It was hard to believe that this week of great lifting had come to such a quick end. The only business left now was handing the Best Lifter awards to their deserving winners. Three awards were presented in the women's division. The Master Female Lifter once again went to the USA's Evangeline Keresey. The Best Teenage/Junior Best Lifter went to Julia Kosturova of Slovakia, and the Open Best Female went to France's Sabine Guillaume. In the men's division, the Master Men's Best Lifter went to our meet director, Mr. Lee Marshall. The Best Teen/Junior Lifter went to Jan Matej of Slovakia. The big surprise was the Open Men's Best Lifter, which went to Jonas Rantanen of Finland. The Best Team award went to the team from Finland. We want to congratulate Lee and Marie Marshall and their crew for a first class and

Tatu Avola pulls for Finland smoothly run world championships. We hope to see everyone next year in France and a strong presence from our newest GPC member, the USPF as the affiliate now representing the United States.

(article continued from pg. 32)

the meet when Rob lifts. I even seen little kids and adults pounding on the stage with there fist to get Rob fired up. The guys that know Rob know he goes all out to help others at meets. From picking up lifters at the airport at 2 in the morning and running around helping me out. When I seen Rob miss his first two attempts at 948, all could think of is Rob's kindness just caught up to him on this night. I was running the meet and knew Rob needed some mental help. LOL! Rob's last attempt I got right in his ear and reminded him how nice he was and that he is the best. Well, not quite that way, I said a few censored words. Rob blasted 848 up on his 3rd attempt for 3 white lights. It is unreal what this guy does meet after meet. To come back after missing your first two attempts is very hard to do, but if anyone can do it Rob can. Great job my friend. Ryan "Benchmonster" Kennelly from Washington State proved on this night why he is the best bencher on planet Earth. Ryan hit his opener of 1014. On his 2nd Ryan went for the all time Record with 1074. Ryan approached the bench with the crowd cheering for him. Ryan took the 1074 and blew it up faster then any other weight I have ever seen him do. The crowd was re-

ally in to it and let Ryan know the lift was good before he got off the bench. When Ryan called out for a 4th attempt of 1102 I thought for sure he was going to get it. It was a good try but just short of lock out. Ryan took first in the HW and won the Best Lifter award. Ryan is one of the nicest guys in Powerlifting I have ever met. Ryan will not hesitate to take pictures and talk to all of his fans at the meet. The guy is class act and I hope to see him at many more of my future meets. The 2nd day of lifting on Sunday was the Full Power Pro meet. \$4000 in Cash awards was up for grabs. In the Lightweight division Jake Baker of Team Carpenter from Dubuque, IA took 3rd place with a total of 1703 at a body weight 197. Jake is only 20 years old and just did the pro meet to get some experience. 3rd place is really good experience and he hit a PR in the deadlift with 600 lb. Great job Jake! Andres Vallez from Washington State took 2nd place with a total of 1576 at a body weight of 152. Nice lifting. 1st place is my favorite Ukraine lifter Vladimir Venglovski. Vladimir always brings me cool gifts from the Ukraine, his broken English is hard to understand but always a great guy to have at my meets. Thank you for coming all the way over from the Ukraine to do one of my meets. Vladimir at a bodyweight of 217 lb. squatted 887,

Blayne Ward - with 1075 lb. record bench presser Ryan Kennelly. Blayne is Meet Director Bill Carpenter's godson.

benched 518, deadlifted 771 and totaled 2177. Vladimir took home \$2000 in cash. Then again I saw him heading over to the casino after the meet. In the Heavyweight division Josie Garcia from Aurora, IL took 3rd. Josie squatted 1041, benched 595, deadlifted 782, and totaled 2447 at a bodyweight of 253 lb. Excellent lifting Josie. 2nd place went to one of the most intense lifters in Powerlifting Jeremy Frey of Team Carpenter & Elite FTS from Mount Vernon, IA. Jeremy is the strength coach from Cornell College. Jeremy is another guy on my team that will go all out to help his fellow lifter

and always gives a hand to help me out with my meets. Thank you. Jeremy's lifts were Squat 986, Bench 705, and pulled a strong 799 for a total of 2491! All PR's for Jeremy. Matt Kroczaleski from Detroit, MI was the big winner. Matt took home the \$2000 in cash and the best lifter award. In the squat Matt missed his first two openers and got his 3rd lift of 1014 to stay in the meet. In the bench Matt hit a best of 705, but suffered a tear in his tricep. Matt finished out the meet like a true warrior and pulled a big 782 deadlift for a total of 2502 at a bodyweight of 228! Awesome lifting Matt! I am glad you and your crew made it over for the meet. I first like to thank all the people who help set up-break down the meet site. The Grand River Center, Luke, Chad, Brian, Jake, John, Tony, JD, Paul, Dustin, Jeremy, Rob, Sass, and anyone else I forgot. You guys are awesome. With out you there would be no meets. Thank you to all the judges - Jeff Baker, Rick Baker, Gary Reichert, Steve Sass, and a special thanks to Bruce McIntyre and Dick Zenzen for stepping in when we were short judges. Dick is a great guy and just loves the sport. We need more people like Dick in Powerlifting. Thank you to all the spotters/loaders - Luke Tigges, JD Dotson, Chad Truitt, Chuck Baxter, Taylor Herbst, and Paul Harris. I know it is not an easy job and I truly appreciate the hard work that goes in to loading heavy weights all day. Thank you to my wife Molly Carpenter for announcing, table help - Co-meet Director Kenny Patterson, my daughter Kayla Carpenter, John Hefel, Becky Stover, And Tara Runde. Special thanks to the Runde family for setting up two of the lifters in there house because Dubuque ran out of hotel rooms. LOL! My Dad and Step mom Dennis and Stephanie Carpenter for working the door and clothing booths. Thank you to all the sponsors: West Metro, Atlarge Nutrition, Nutribodies, APT, INC, Anderson PowerLifting, Dubuque Glass, Hoolihan's Restaurant, Tan World, Design Tile, Professional Window & Tint, EPIC Construction, Diamond Jo Casino, Budweiser, and GNL Productions. Last but not least - Thanks to all the lifters who came to the meet and supported the UPA Pro-Am Power Weekend meet. (results/photos/report were provided by the courtesy of Meet Director Bill Carpenter)

Jeremy Frey, the strength coach at Cornell College, had all PRs at the U.P.A. Pro-Am Power Weekend.

GET 4X MORE BAR BENDING MASS

With massive size comes raw power — plain and simple. And that's why you need the scientifically advanced musclebuilding weight gainer, Mass-Tech™ — The World's Most Powerful Weight-Gain Formula. By consuming only two daily servings of Mass-Tech™, you'll pack your system with more than 2,000 massbuilding calories, 114 grams of protein and an earth-shaking 388 grams of energy-producing carbohydrates. In fact, in an eight-week clinical study, subjects consuming the amount of calories found in Mass-Tech™ were able to pack on a shocking 420 percent more mass than the control group (6.8 vs. 1.3 lbs.). That's four times more mass! With these results, you'll be able to push plate after plate of bar-bending weight.

- Shocks muscles into mind-blowing growth
- Causes explosive gains in strength — fast!
- Anabolic compounds clinically proven to build dense muscle mass

An 8-week study examined the addition of 2,000 calories (2,060 calories are found in two servings of Mass-Tech, when each is mixed with two cups of skim milk) to a high-protein diet containing approximately 2,300 calories and a weightlifting program. On average, subjects gained 6.8 pounds of mass along with 1.2 inches on their chests and 0.5 inches on their arms. Control subjects gained only 1.3 pounds of mass. *=World Records. **=National Records.
#=State Records. Fifty lifters attended this meet at the classy five star Marriott Hotel in West Minneapolis. Four world records were set in the deadlift. Katelyn Tobin in the Junior 123 pulled 352.5, close to triple bodyweight. Her training partner Debbie Damminga pulled a 407.7 in Master 47-53/148 for a world record. They are both coached by Greg Damminga who has squatted 900 lbs. and benched over 500. Both of these ladies are laid back and one world never know by looking at them that they possess such exceptional power. Cheryl Anderson, weighing 104.6 set a world record 332.7, which is 18 lbs. over triple bodyweight. Cheryl is extremely aggressive at the bar. It was her first world record in WABDL. The fourth world record was set by Dennis Johnson, weighing only 164.4 at age 65, pulled 545.5. Dennis is capable of pulling 600. He is usually 198 or 220 and

Don Rygh got a 512 bench at 242 lb., 47-53 age group. (photograph provided by Chuck Venturella)

has set records in these classes back in 2000 and 2001, but he has been dropping down to 181 where he pulled a world record 580 a couple of years ago and just recently dropped down to 165, where once he settles in at that bodyweight he should hit 600. In Master 61-67/198, Bob Krowech pulled a national record 611.7 at age 63. In any other federation that's a world record, but Olicio Dos Santo from Brazil pulled 661.2. Olicio is the best master deadlifter in the world, considering he's 63 and pulled 672.2 last November, weighing 204. However, I believe bob can catch Olicio in two years. He's the most competitive lifter I have ever seen. Other great master deadlifters are Tom Eiseman with 772 at age 49 at 198, Jerry Capello with 806.7 at age 50 at 242.

Cheryl Anderson poses with the sword she won for her world record deadlift at the WABDL Midwest Championships with WABDL President Gus Rethwisch

Tee Meyers who has done 760 at 198 at age 50, and Richard Cirigliano 619.4 at 165 at age 53. Gary Edwards was impressive with a 578.9 Minnesota State record at 54-60/220 in the deadlift. Other state records that were on the radar was Ben Bittner with 611.7 in Class 1/220, Jacob Greenberg of Wisconsin with 551 in Class 1/275, Mitch Edelstein with 666.7 in Master 40-46/220, Thomas Guiney of Oklahoma pulled 573 in Master 40-46/308. Dave Felton, the WABDL Wisconsin state chairman pulled 573 in Master 47-53/181. He's in the top five all time in Master 47-53 in WABDL in both 165 and 181. Jonnel Rivet in Master 47-53/132 pulled a Minnesota record 352.5. Obviously there was some great female deadlifting in this meet! Ben Tittle set a Minnesota record dead of 635.9 in Open 198. Brian Durham had the highest deadlift in the contest with a Minnesota state record 716.2. He was also drug tested and passed. Mrak Taschuk was a competitive second with a 677 and a game try at 716. Travis Miller pulled a 407.7 at 165 in 18-19 age group in only his second meet. Jacob Greenberg of Wisconsin set two state records with a 551 in both Class 1/275 and Teen 18-19/275. In the bench, Robert Vick put up a monster 854 with perfect lockout, but your typical shirted bench, a little on the wobbly side but no double of dipping. Robert weighed in at 382.8 and passed the drug test. Katelyn Tobin at 122.4 set a Minnesota bench record of 159.7 in Junior to go along with her world record deadlift. In Master men 40-46/198 Joel Strantz set a Minnesota record 374.7 and in 40-46/259 Jason Steffens set a Minnesota record 424.2. Jason has been a sponsor for this meet in past years and is much appreciated in his efforts to help WABDL survive in USA Powerlifting territory. In Master 47-53/198 Mike Borg set a Minnesota record 400 and in Master 47-53/242 don Rygh finally got his first 500 bench with a 512.5 Minnesota record. He only

weighed 228 and he also has done a lot to help promote WABDL in Minnesota. His training is intense and smart. He only benches once a week and I assure you anybody that trains with him will improve. Noble Cozine of Iowa got his first 500 bench at 47-53/275 and was like a kid at Christmas. It was a goal he had been after for many years. Maurice Lowery of Oklahoma set a record 380 in 54-60/220 and traveled all the way from Tulsa to lift and visit his father. In Master women 40-46/198 Michonne Berry set an Illinois record 275.5 in her first WABDL meet. In unlimited, Kelly Franklin benched 275.5 raw with 15 lbs. to spare. In Master 47-53/132, Jonnel Rivet set a Minnesota record 148.7 in the same age group at 148. Debbie Damminga set a Minnesota record 203.7 and Lisa Staplin at 165 set a Minnesota record 187.2. In Open men, Dave Ross set a Minnesota record 440.7 at 198. At 242, Matt Vinopal was huge with a wise record 573. Noble Cozine set an Iowa record 501.5 at 275 to go along with her master record. In Teen 12-13/123, Joshua LeClair set a Minnesota record 104.5 at 123 and Travis Miller set a wise record 352.5 in Teen 18-19/165 in only his second meet. I want to thank Chuck Wong who did the scorekeeping. The judges were Jerry Gnere, Dan Hawkinson, and John Husdon. The sponsors were Dr. Fred Clary of Advanced Injury Rehabilitation, Brian Welker of Competitive Edge Gym, Brent Mikesell of Iron Gladiator, Alan Thomas of Apt Wraps, Shawn Madere of GLC 2000, Mike Lambert of Powerlifting USA, Ken Anderson and PEte Alaniz of Titan Support Systems, Jon Doyle of USP Labs, Chet Groszkreutz of Ivanko Barbell, Neal Spruce and Odd Haugen of Apex Fitness, Grace Cloniger of House of Pain West and Giorgio Usai Jr. and Sr. of Forza Strength Systems. (report provided courtesy Gus Rethwisch)

(continued from page 20)

never had much success with an NO2 product or creatine, but my lifts are crazier than ever and I'm on both right now.

CB: We all feel at home in the gym around our peers, but how do people react in the outside world when you tell them you squat over a grand and bench over 700? Is it even worth explaining about equipment to someone who doesn't know what it is?

BC: I honestly don't like to discuss much about my lifting with people outside powerlifting. Lots of reasons for my stand on that, but mainly because so many people lie about what they actually can lift, so I don't want to sound like one of "those guys". I also don't like to sound like I'm bragging either. When they hear what I lift, they do freak, lol.

CB: What do you like to do away from the gym for fun?

BC: I like to go to church, movies, go out to eat, go fishing and spend time with my friends and family.

CB: As a massage therapist what kind of person or physique do you hate massaging the most, you must have a funny story about this?

BC: I really dislike massaging beautiful women. It's a horrible

Brian and some Team Samson training buddies. (Critical Bench)

thing ... Nah, one that is hard to work on is really tiny women who are very bony. I have fat hands and it's hard to work on somebody who is mostly bone. I think the funniest thing to ever happen to me while working is a male client kept telling me as I was working on his back that "Brian.. your arms are so tremendous"... It was strange!!

CB: That's funny. What are your future goals Brian? Professionally, personally and in powerlifting.

BC: I'm single. I would like to have a family some time soon. I am 27, so I'm not so young anymore. I do like massage for a living, but

it's hard on the body and I know I can't do it forever, so I need to find my niche soon and I'm sure I will. As far as powerlifting, I want to hold the top spot @ 242 and eventually @ 275 before I can't do this any longer.

CB: I don't think anyone doubts you can achieve whatever you want. What has powerlifting taught you about yourself and life? What motivates you to compete?

BC: Powerlifting has taught me much humility and patience. It is a hard pill to swallow sometimes, especially when you train for a meet for 12 weeks and something

doesn't go your way and you end up going home early after the squat. I do it because I love it and want to be the best at it.

CB: Anyone else you would like to thank?

BC: I would like to thank Jesus for keeping TSP safe all the years training and at the meets. I would like to thank John Inzer for all his help and gear. Inzer you are incredible. I would like to thank you Mike and Critical Bench for all the help as well and I'm looking forward to working with Critical Bench in the future. Thank you Adam, Clint, Tony, Daniel, Travis, Tim, and all the rest of Team Samson. Adam has always provided the best possible place to train and we are all forever grateful to him. Thank you Frankl, Rick Hussey and all of Big Iron for their help with the bench. Rob you have been a big help as well. Hook, Byrd and all my other very close friends I have made through powerlifting. Thank you Lester for all you have done too. I wouldn't trade my last 5 years that I spent powerlifting and traveling for anything. Thank you to everyone who has supported or helped me at one time or another, whether it be a donation or a ride to or from the airport etc. Thank you so much!

I was relaxed, too relaxed. The lifters started pouring in for the rules meeting at 9:30. Wayne gives a thrilling overview of the rules for squats benches and deadlifts. Wayne got so excited after he was done he moon walked over to the scorers table where KK and Amy Jackson (APF Secretary) were. Just kidding Wayne. Did you and Dennis drive the Aflac bug down? The atmosphere for the meet was electric. The lifters all broke out into the Electric Slide for a minute and then we got started. First up were the women Amy Vargas (age 24) and Suzanne Milikoy. Both started out a little nervous on the squats but both powered thru on their third lifts. Amanda wrap's her knees so tight she did the Frankenstein walk up to the monolift. The both achieved nice totals, Amanda in her first meet. Suzanne a claims adjuster from Tampa Florida and Girlfriend to Mike Swanke was the most color coordinated of the meet. The master's lifters came out in force. Bill from Palm Coast had a good day. 363-303-418 age 59, trains with me sometimes at Orlando Barbell. So did David Agistini from Tampa Barbell. David a construction worker and sometimes Gearman Nutrition employee Moved the weight around well all day. Greg Westerdall (Critical Bench webmaster and powerlifting sponsor had good days. They both were pulling Conventional wearing an Inzer Fusion DL suit. C.P.A Dan Herring (Belle Glade FL) pulled a nice 545 Sumo. Westerdall hit a 617 bench, the fifth one from Tampa Barbell to do so. Tommy Fannon feeds his guys raw meat down there. Seriously they have a good thing going down there, as well as Bob Yung's Southside Barbell in Boca Raton, who sent some lifters down. The best lifter of the meet was Orlando Barbell's Dutch Flesh. A Ga-Fla truck driver and masters 198 lber, Dutch has been around for a while, and has excellent squat form and platform savvy. He hit a nice 815 third squat (Frantz canvas) suit, followed by a 501 bench and a 601 pull for a 1917 pr total around this weekend. His wife Melonie, Ronnie Paris and Dutch's sons were there for support. But Dutch didn't wear his trademark ten gallon cowboy hat around this weekend Great day for Dutch. Dwayne

"Coach" Koff had some of the highest numbers in the meet including a 760 squat and a high 600 dl, Check his total below. Dwayne teaches High school in the area and coached His football for 6 years, some of his players are in the NFL right now. The bible says Pride comes before the fall. I'm a believer now. I was a little overconfident coming into this meet. And way too relaxed. After the rules meeting I went up to the room and took a nap. I bombed in the bench only; the last lift was 655, close. My 9lb tabby cat Tiger could have locked out more weight than me that day. Lesson learned; stop doing heavy singles to boards every week, Thanks Tommy Fannon and Jim Hoskinson for the needed coaching. On to the next meet, the WPC worlds in November. Check worldpowerliftingcongress.org for details. This will be big. Over 300 lifters from many different countries. It would be nice if Andy Bolton or Vlad came over and lifted. The Apf is strong in Florida. Although this was a small meet a good time was had by all. God Bless (Keith Southwood)

(continued from page 6)

Eiseman from New Jersey weighing in at 180.25. He is the only man in the history of the world that has stood up with 800 pounds. He has been working his way back up through the 700's the past few years and had a close miss at it just a few months before. Of course this would be a slightly different environment from his normal meets with the bar that was not specialized for deadlifting and all of the tough competition based on Wilks score instead of just people from his weight class. Tom took a gamble in dropping the weight before this meet to try and get the best Wilks score possible, but would it turn out to be a smart move? Next was Robert Herring and he is an unknown to many. He has done a couple of 100% Raw meets locally in North Carolina and another local meet in Georgia. He decided to do a tune-up meet the week before and what a tune-up it was with a 752 pull raw at 195 pounds. He hoped that with adding his suit he would do something even more mind boggling to get qualified for the Arnold. Herring is also a member of the US Army and has to train around those

requirements as well. Would choosing to do a warm-up meet raw just one week before turn out to be the right move? Tee Meyers was the heaviest man of the final three freaks. He weighed 195.25. He chose not to cut any weight and wanted to pull something ridiculous. He almost did not come as his brother passed away the night before. But Tee is a true iron warrior and decided to come up and lift and dedicate his performance to his brother. It was a very emotional night for him and the crowd automatically gravitated toward him and his cause. Meyers and Herring chose to open up with the 705 minimum to get into the Arnold. Both men absolutely crushed the weights with not one red light between them. Eiseman decided to open up slightly higher with 715, and it came up fast off the floor, but right before lockout he let his weight get forward and the bar kind of dipped right before lockout. Although he did lock it out, he got three reds from the judges. Eiseman decided to go up despite his miss to 730, Herring chose 740, and Meyers jumped the biggest to 750. Eiseman again rocketed his lift off the floor, but this time his hips were too far behind and he held the weight for about four seconds just a hair shy of lockout but just could not slide those hips through for that final push. Lesser judges might have been fooled because it was so close, but the judges made the right call and again threw three reds. Herring walked out to take his 740, but his set up was a bit off. He let the weight roll away from him at the bottom and the weight came off the floor ever so slightly and then went back down and rolled up against his shins and he pulled it up. The judges threw three reds for the up and down movement off the floor. Meyers was left and he came out and really had his lift in the groove and pulled it up nicely. There was a misload, however, on his lift. Initially the judges thought it was 760, but he realized it was really 745. Tee was a bit disheartened by the

change, but elected not to retake 750, but instead to go up to 760 on his final lift. This would tie him for the heaviest attempt even if he and Eucker got theirs, he would have the better lift on the lighter body-weight. It was not a bad strategic move because his form was really on and he was killing some weights. He also had some huge crowd support behind him. Eiseman came out for his 730 third and was very focused. He stood behind the platform with his eyes closed looking more like a martial artist than a powerlifter. The crowd was going nuts for him to stay in the meet. After I got the crowd pumped on the mic, I even moved out to right beside the platform for a good view. Tom set it up perfectly this time and the weight absolutely blew off the floor up to lockout. He had just pulled the biggest Wilks score on the Arnold rankings. Herring was next. He went up to 750 even though he was called on his previous 740. He felt he had the strength and he wanted to win the good natured rivalry for most weight pulled between he and Meyers if Meyers were to miss his last attempt. He set up for that lift and his well muscled physique went to work on that huge pull, but it was just not to be on this night. Now, it was down to only Meyers. I don't know who ever gave him the nick name "Skinny Man", but they obviously never saw him without his shirt on. His torso is thick and ripped and he was ready to demonstrate that his muscles were not just for show. If Tee could pull this weight, he would move into the #2 spot on the Arnold DL rankings. The crowd left the stands and spilled out onto the floor just behind the head referee and was going insane for his last pull. Meyers used his flawless technique to get the weight easily off the floor and above his knees but just before lockout he slowed down and seemed to lose both his grip and his air at the same time and collapsed in exhaustion on the bar. It was just a hair too heavy on this night. What a show it was. Four men are now

Mike Nease, one of the greats, prepares to smoke a deadlift

ranked in the top 12 of the Arnold DL rankings. After everyone makes their final declarations for the meet, we hope that all four of them get the invite to compete. I really think that all these lifters should be commended for doing this meet to get to the Arnold. Herring, Meyers, and Eiseman have not done a USAPL meet in a long time, but they decided to come together and give the powerlifting community what it needs more of; head to head match-ups between the best lifters regardless of federation. It was great night of deadlifting, but the amazing part is that it is only a glimpse into what will happen at this year's Arnold DL event. When you add in a few more of the best pullers in America with a few of the best from Europe, it will be a deadlift show for the ages. (Alex Campbell, USAPL TN Chair, NOTLD Director and Promoter)

Tom Eiseman - "what can I say?"

David Poole sets a Junior Bench Press record with 550 lbs. (Baird)

4th-SQ-325 DL-425
Venue: The Training Center. Meet Director: Kate Baird. May 10 2008 marked the third anniversary of the Delaware Power Classic at the Training Center in New Castle, DE. The event is now sanctioned by the APA, and still brings together some of the best and most entertaining lifters in the Mid-Atlantic region. One world record was set this day by David Poole in the Junior 220 class, who popped a 550 bench easily right up. Several DE state records were also set. The Sussex Tech Team was represented by four teen lifters all in their very first event. Benjamin Barron, Brad Ellingsworth, Franklin Ogundare and Aikeem Brewer all look to be strong lifters with great futures on the platform. Teri Mangini narrowly missed a world record squat this time, but she's got the power to do it easily another day. Rudy Aikens first wowed us with thighs the size of large tree trunks, but wowed us even more with an easy raw 730 squat. Darrell Barnes showed unwavering determination finally coming through with his 520 in the Masters III. David Murray and Marty Nickel each continue to improve with bigger lifts each time I see them. Blair Roberts, Don Hutchinson and Mark Obey all brought their best efforts in for some great benching. Rudy Aikens blew his shirt out on a big 700. Chris Webb keeps breaking his own records every time he competes. Jon Stoklosa was rebounding back from an ACL tear, but is rehabbing very nicely. David Hill showed us the most enthusiasm of the day along with his superb technique. Jim Widener came and showed us why they call him BigWides - easy deadlifting for him this day, but I know he's got more in that tank for next time! Jai Bowen appeared to be a little off this day, but still gave us some good looking lifts. Manuel Serrano at 14 looks capable of lots of big lifts should he continue to pursue this sport in the years to come. Hank Beaudet had to be talked into pulling a fourth and surprised himself with a beautiful 500

deadlift. My "Spirit of Lifting" Award goes to Francis Warner this time he brought pure joy with him and it came through in his lifts! We managed to raise \$100 for the Special Olympics of DE, in honor of our meet photographer Hank Stoklosa. And let me not sign off by saying I have the absolute BEST support behind me while running these meets. I could not do this without the generous support of The Jersey Iron crew (especially Big Tone Barbaccio), Club Dynamo gang out of Maryland, Jack and Chrissy Osborne of The Training Center, various "Animals" Phil and Boz you are UBER spotter/loaders, my son Slater Clampitt for his time and talent, and, of course, Len Walker! (thanks to Kate Baird for providing these results)

Lifters came from three states to compete in the bench press and deadlift. The meet started with Nick Howland in the bench press putting up 275 lbs. to win the 198 open class. Bob Hochstein took the senior masters 198 with a press of 235 lbs. Not bad for the Gary Busey look alike that's a deadlifter. Gary Koch took the 198 junior masters with a press of 265 lbs. Jerry Dean got a strong opener at 250 lbs. to win the masters 242 class. Will Cole won the 198 teenage with a press of 275 lbs. Pete Brown, lifting in his first meet, put up a solid 295 lbs. to take the 181 teen title. Adam Stover won the 198 junior class with solid lifts hitting 340 lbs. on his third attempt. In

flight two, Robert Hanson, a deadlifter, won the 259 masters with a press of 265 lbs. Dave Leslie hit a strong 370 lb. press to win the masters SHW class. He would have smoked his third attempt, which was 505 lbs., but he hit the upright and that caused problems. Cozy Cozine came in getting a lifetime PR pressing 510 lbs. to win the 275 masters and take best lifter honors. Big Brother Bear Paul Mercado had an off day not getting a lift in. Fighting to touch each time, Paul, the great lifter he is, brushed it off and knows it was a learning experience. In the deadlift, Richard Lee came over making 260 lbs. look easy to win the masters 165 class. Awesome guy said he will retire from lifting next year. He is a class act. Kerry Dean lifted in the 242 masters pulling 360 lbs. easy to win the class. Keith Koch won the 181 open with a pull of 330 lbs. John Miller, from Team Miller, pulled an easy 465 lbs. to take the 308 masters class. Barry Folgate pulled a solid 520 to win the 165 open class. He tossed the weight down after hitting that big pull, we gave it to him as the little ella was a bit over excited. Don't want to deny a lift because someone gets a little excited too early. Adam Miller came in with an injury. It appeared only getting his opener of 480 lbs. to win the SHW open class. Bob Hochstein won the 198 senior masters with a nice lift of 570 lbs. It was a slow one, but strong Stewart Coogan pulled 510 lbs. to take the 220 masters title on his opener. Looked like he was going to get his second pull, but it just didn't happen. A big thank you to all our help! Jen Mercado, Mrs. Brother Bear, Barry Folgate, Mike Murray, Richard Lee, Mike Pettinger, and Cozy Cozine. Until next time, do something to make the world a better place for our children. (results of this competition were provided to PL USA by Duane Burlingame)

ADVANCE DESIGNS

THE BEST POWERLIFTING BELTS IN THE WORLD
THE FOREVER GUARANTEE™ MANUFACTURED SO SECURELY WE BACK UP THE LASTING WEAR OF YOUR BELT FOREVER.

13mm lever belt \$68
13mm buckle belt \$70
10mm buckle or lever belt \$58
Tapered buckle or lever belt \$52

Choice of stiff leather for the firmest support or soft leather for immediate comfort. Extra firm leather will conform over time for a permanent personal fit. Soft leather will conform to your shape more quickly. Available in any style. Most popular choices are double prong buckle, single prong buckle or lever belt. 13mm or 10mm thick, 10cm wide or 10cm tapered to 6cm body-building style suede both sides, suede inside only, or smooth leather both sides.

- ZINC PLATED STEEL BUCKLE.
- TONGUE LOOP RIVETED NOT SEWN.
- LOCKSTITCHED WITH CORROSIVE RESISTANT, HI-DENSITY NYLON.
- SAME RIVETS AS USED ON THE SPACE SHUTTLE.
- Highest quality suede provides non-slip surface.
- NOT BRADDED. HIGH COMPRESSION RIVETED. WILL NEVER COME LOOSE.
- New, closer prong holes for more choice in precise fitting.
